Sysadmin

Works at Normation

Rudder developer

CFEngine expert

Make sure the
service does it's job

Install & Update
Configure
Run

Security

User accounts
Password policy
Backups
Log everything
Security patches

Service management

Availability

Limit the impact of a failure
Scale out
Plan for disaster recovery

Knowledge

Document configuration
Formalize procedures
Log changes

Automate

First install + reinstalls
Update
Configure

Collaboration

More knowledge:

Centralize information
Full change log

Less documentation:

Less written procedures
More automation

Configuration management benefits

Regular checks

Install OK?
Configuration OK?
Integrity?

Industrialization

Re-use (configs, policies...)
Reporting on config status
Dashboards

**In some situations, configuration management
may be too much overhead...**

**For the all the rest,
advantages are undeniable!**

But does everyone really benefit?

Managers?

Junior
sysadmins?

Non
specialists?

Rudder
Drift assessment

Goals

**Lower the learning
curve to use CM**

This may mean losing some
flexibility but mustn't mean
losing efficiency

**Share CM benefits
with a wider population**

Different information and
capabilities for different people

Rudder

Drift assessment

Fundamentals

**Build on
reliable tools**

CFEngine[®]

Based on CFEngine
Lightweight and powerful

**FUSION
INVENTORY**
Automatic
inventory

open source

OS-specific
packages

Library of infrastructure
configurations included

Improve

Web interface

Reporting graphique

Rudder
Drift assessment

Principle

New nodes

Inventory

Web interface on Rudder server

View node data

Put nodes in groups

Configure rules on groups

View infrastructure status

CFEngine policy

Managed nodes

Reports

Configuration Rules

Predefined templates to manage systems

- Install packages, distribute files
- Manage users, distribute SSH keys
- Configure DNS, NTP, package managers
- Schedule backups
- ...

Parametrization in the Web Interface

- Forms to change defaults

Conversion into CFEngine Policies

- Applied by CFEngine agents

Rudder
Drift assessment

Current status

Version 2.3
released in
october 2011

Web interface to
manage
nodes and
configuration rules

Real time reports
on infrastructure
status

Policy Templates
(currently 33)

All changes
logged

Packaged for main
Linux distributions

Demonstration

Rudder
Drift assessment

Install

Installing a Rudder server

```
# echo 'deb http://www.rudder-project.org/apt-2.3/ squeeze main' >> /etc/apt/sources.list
# aptitude update
# aptitude install rudder-server-root
# /opt/rudder/bin/rudder-init.sh
```

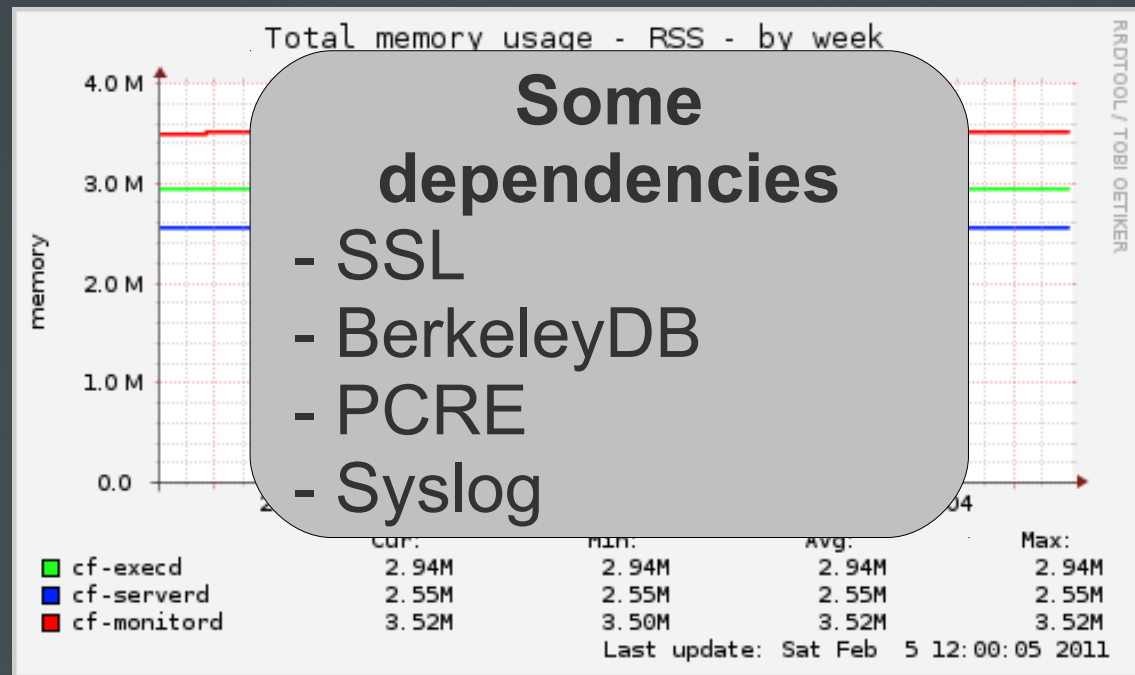

Installing Rudder on a node to manage

```
# echo 'deb http://www.rudder-project.org/apt-2.3/ squeeze main' >> /etc/apt/sources.list
# aptitude update
# aptitude install rudder-agent
# echo "server address" > /var/rudder/cfengine-community/policy_server.dat
```

Requirements (node)

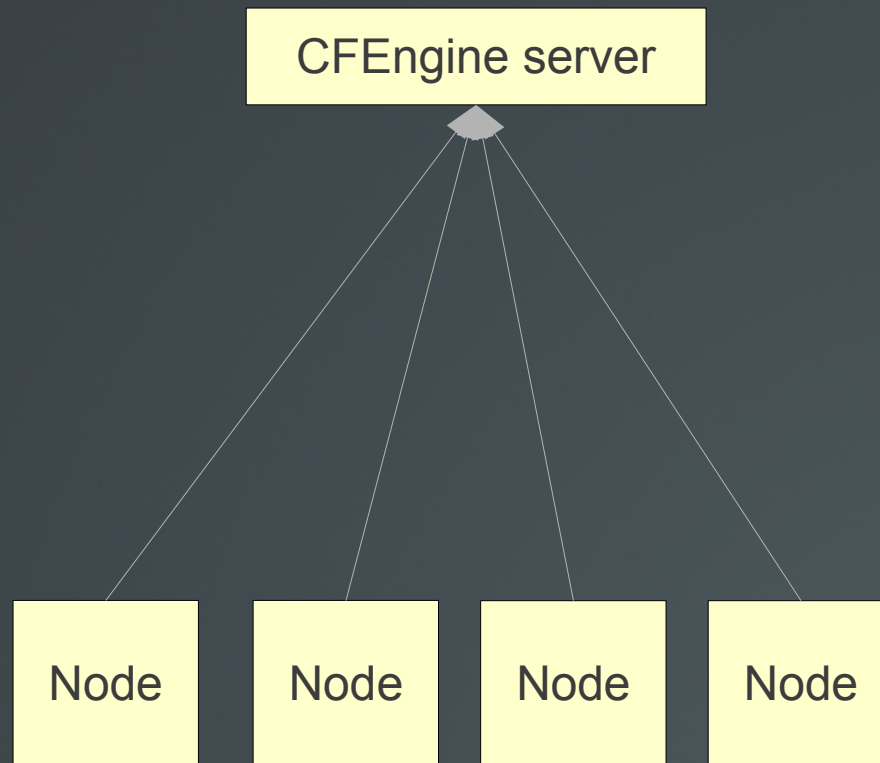

Small amount of
free RAM
(10-20 MB)

Memory occupation of CFEngine daemons

Rudder architecture

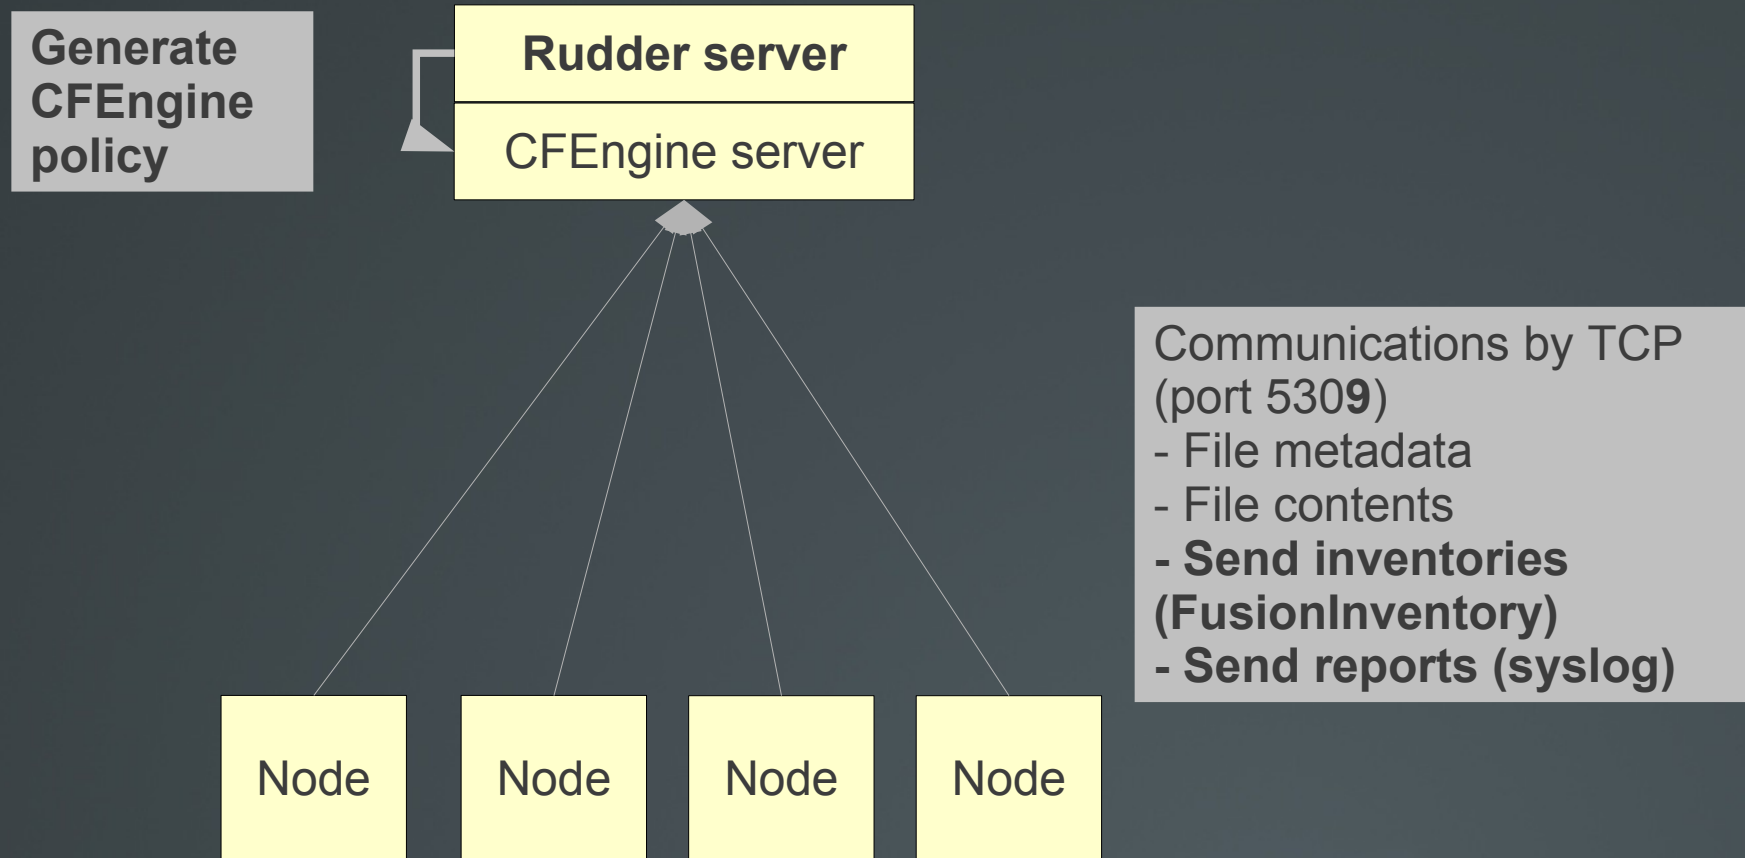

- Based on typical CFEngine architecture

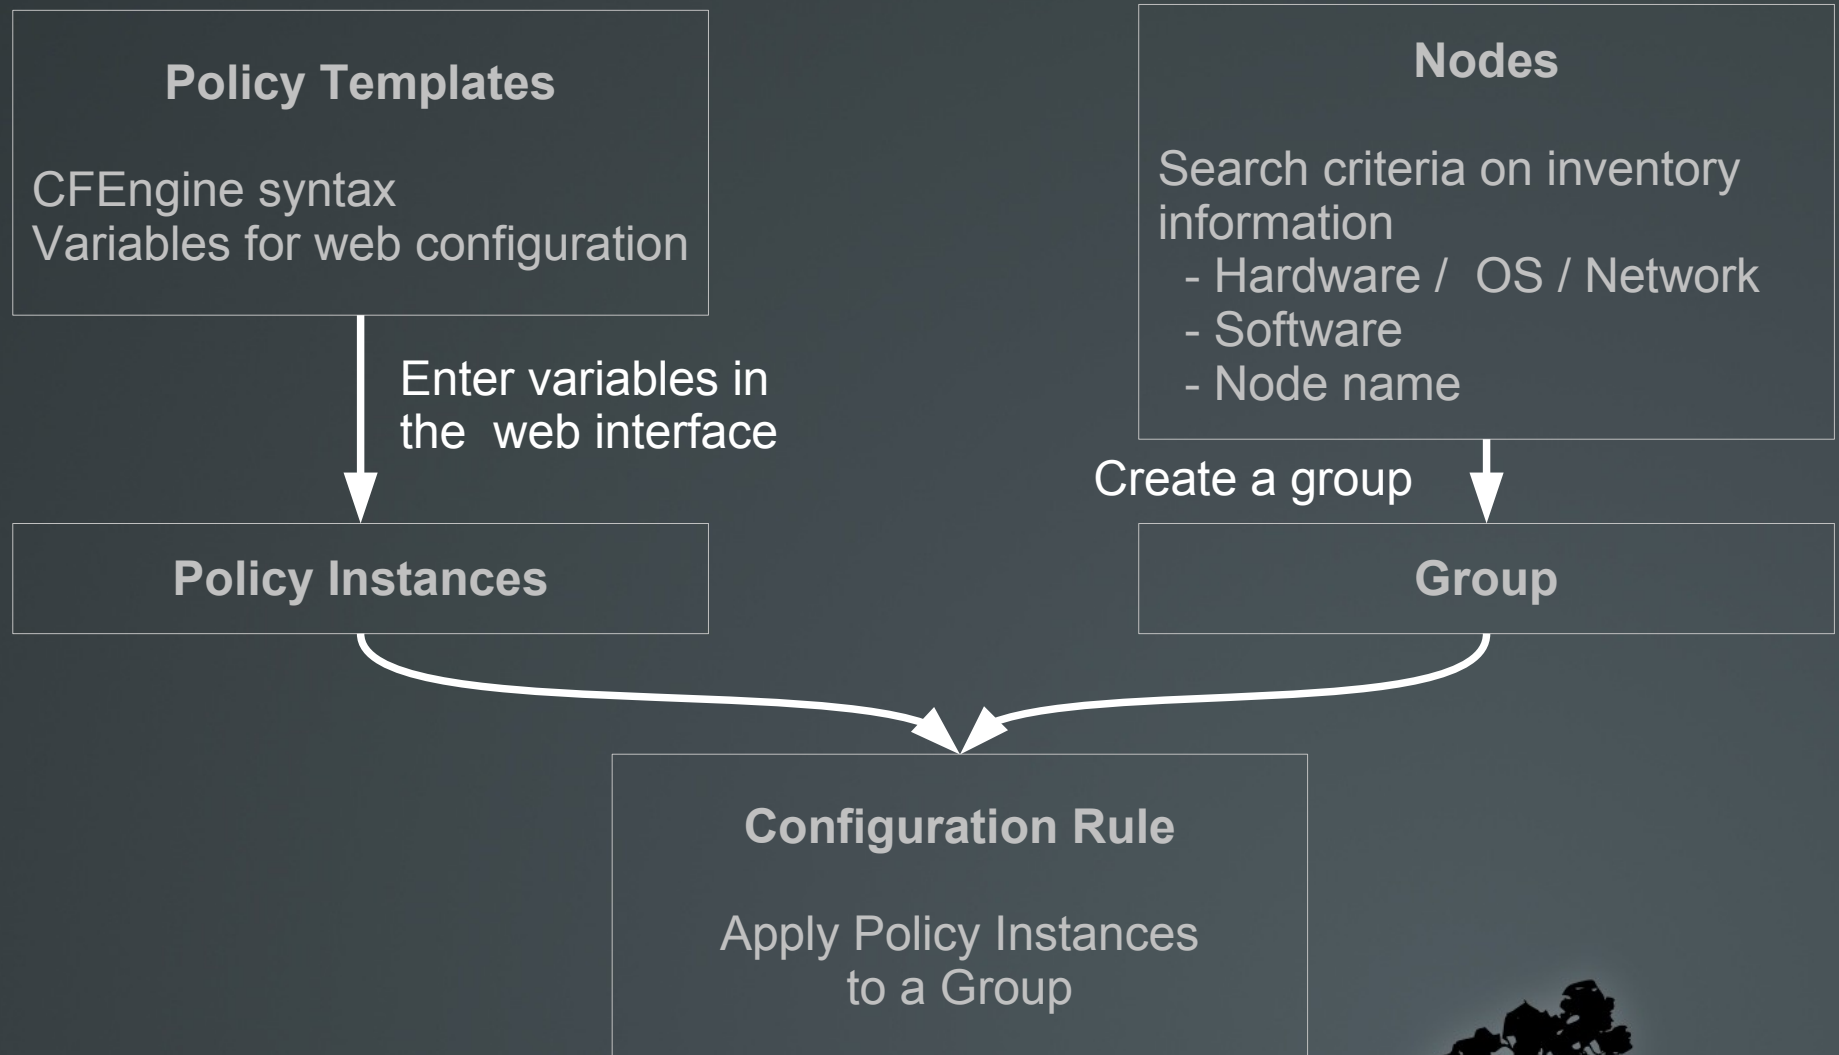

Communications by TCP
(port 5308)
- File metadata
- File content

Rudder architecture

- Extra components on the server only

Rudder workflow

Rudder
Drift assessment

Extend

Write new Policy Templates

- Based on CFEngine 3
- An XML descriptor to set up the web forms
- Configure anything!

Write plugins for the webapp

- Plugins are automatically discovered at startup
- Implementation example:
<https://github.com/Normation/rudder-plugin-helloworld>

Roadmap

- 2.4: February 2012
 - Import/Export configurations across Rudder servers
 - Approval process for changes before deploying them
 - More and better Policy Templates
 - Deleting nodes
 - Simple REST API
- 2.5: Mid 2012
 - Better Policy Configuration display
 - More detailed reporting
 - Authorizations

Community

- Source code on GitHub
- Documentation wiki
 - <http://rudder-project.org>
- Small open source community
 - Mailing lists
 - rudder-users@lists.rudder-project.org
 - rudder-dev@lists.rudder-project.org
 - IRC : #rudder on FreeNode
 - Twitter: @RudderProject

Questions?

Stay in touch...

Normation 

The logo for Normation consists of a cluster of yellow, hexagonal shapes arranged in a roughly triangular pattern.
