

LOFAR Transient Detection Pipeline

Gijs Molenaar
gijs@pythonic.nl

ASTRONOMICAL INSTITUTE
ANTON PANNEKOEK

UNIVERSITEIT VAN AMSTERDAM

Agenda

- Transient detection
- Pipeline layout
- Software

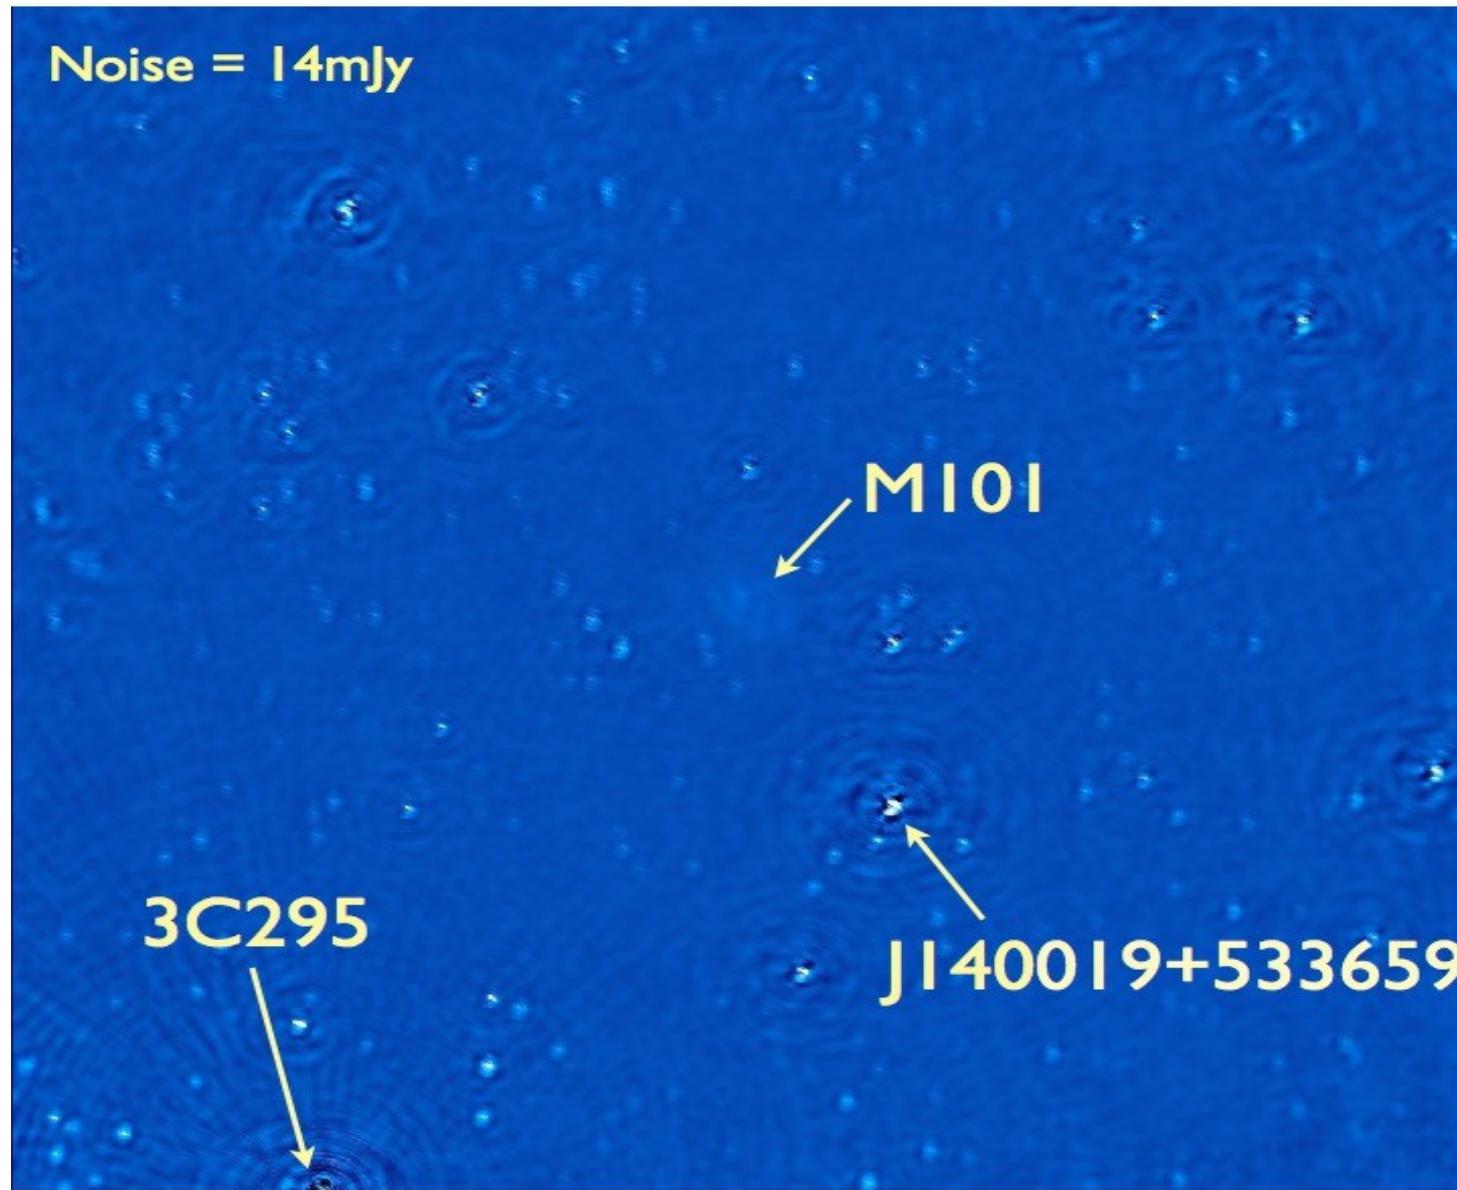

Transients Detection

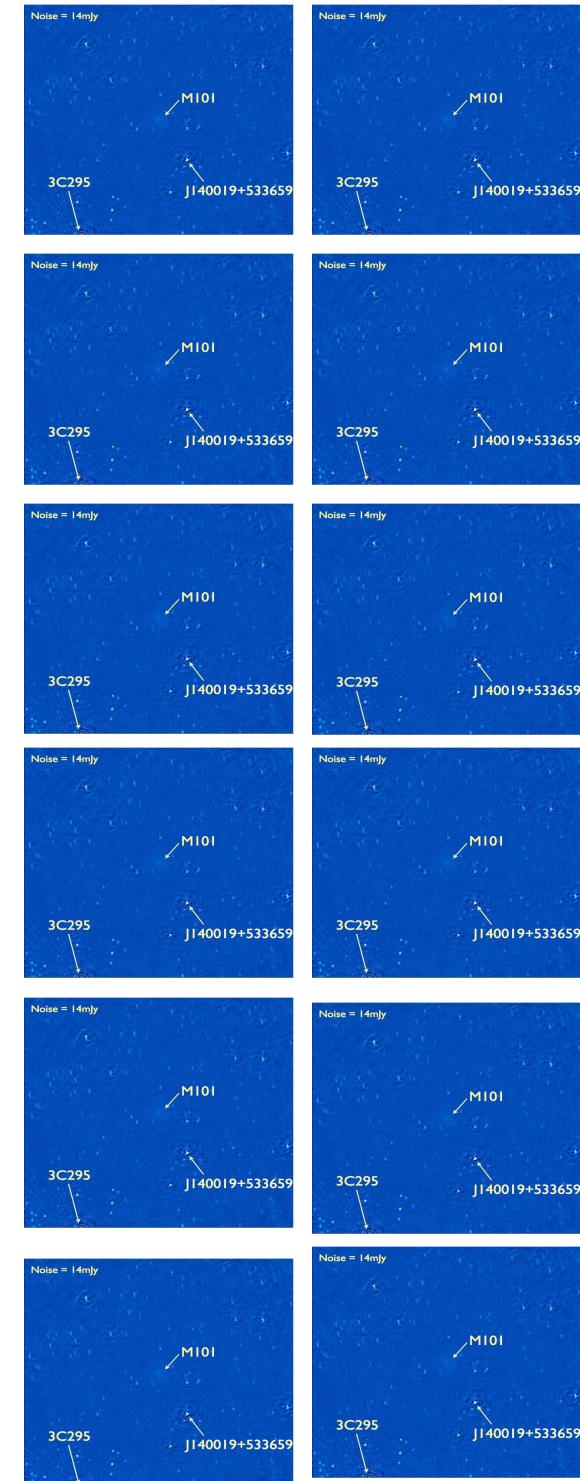

- Static sources are boring
- Transient – something that changes
- Huge amount of data – automation

Image data

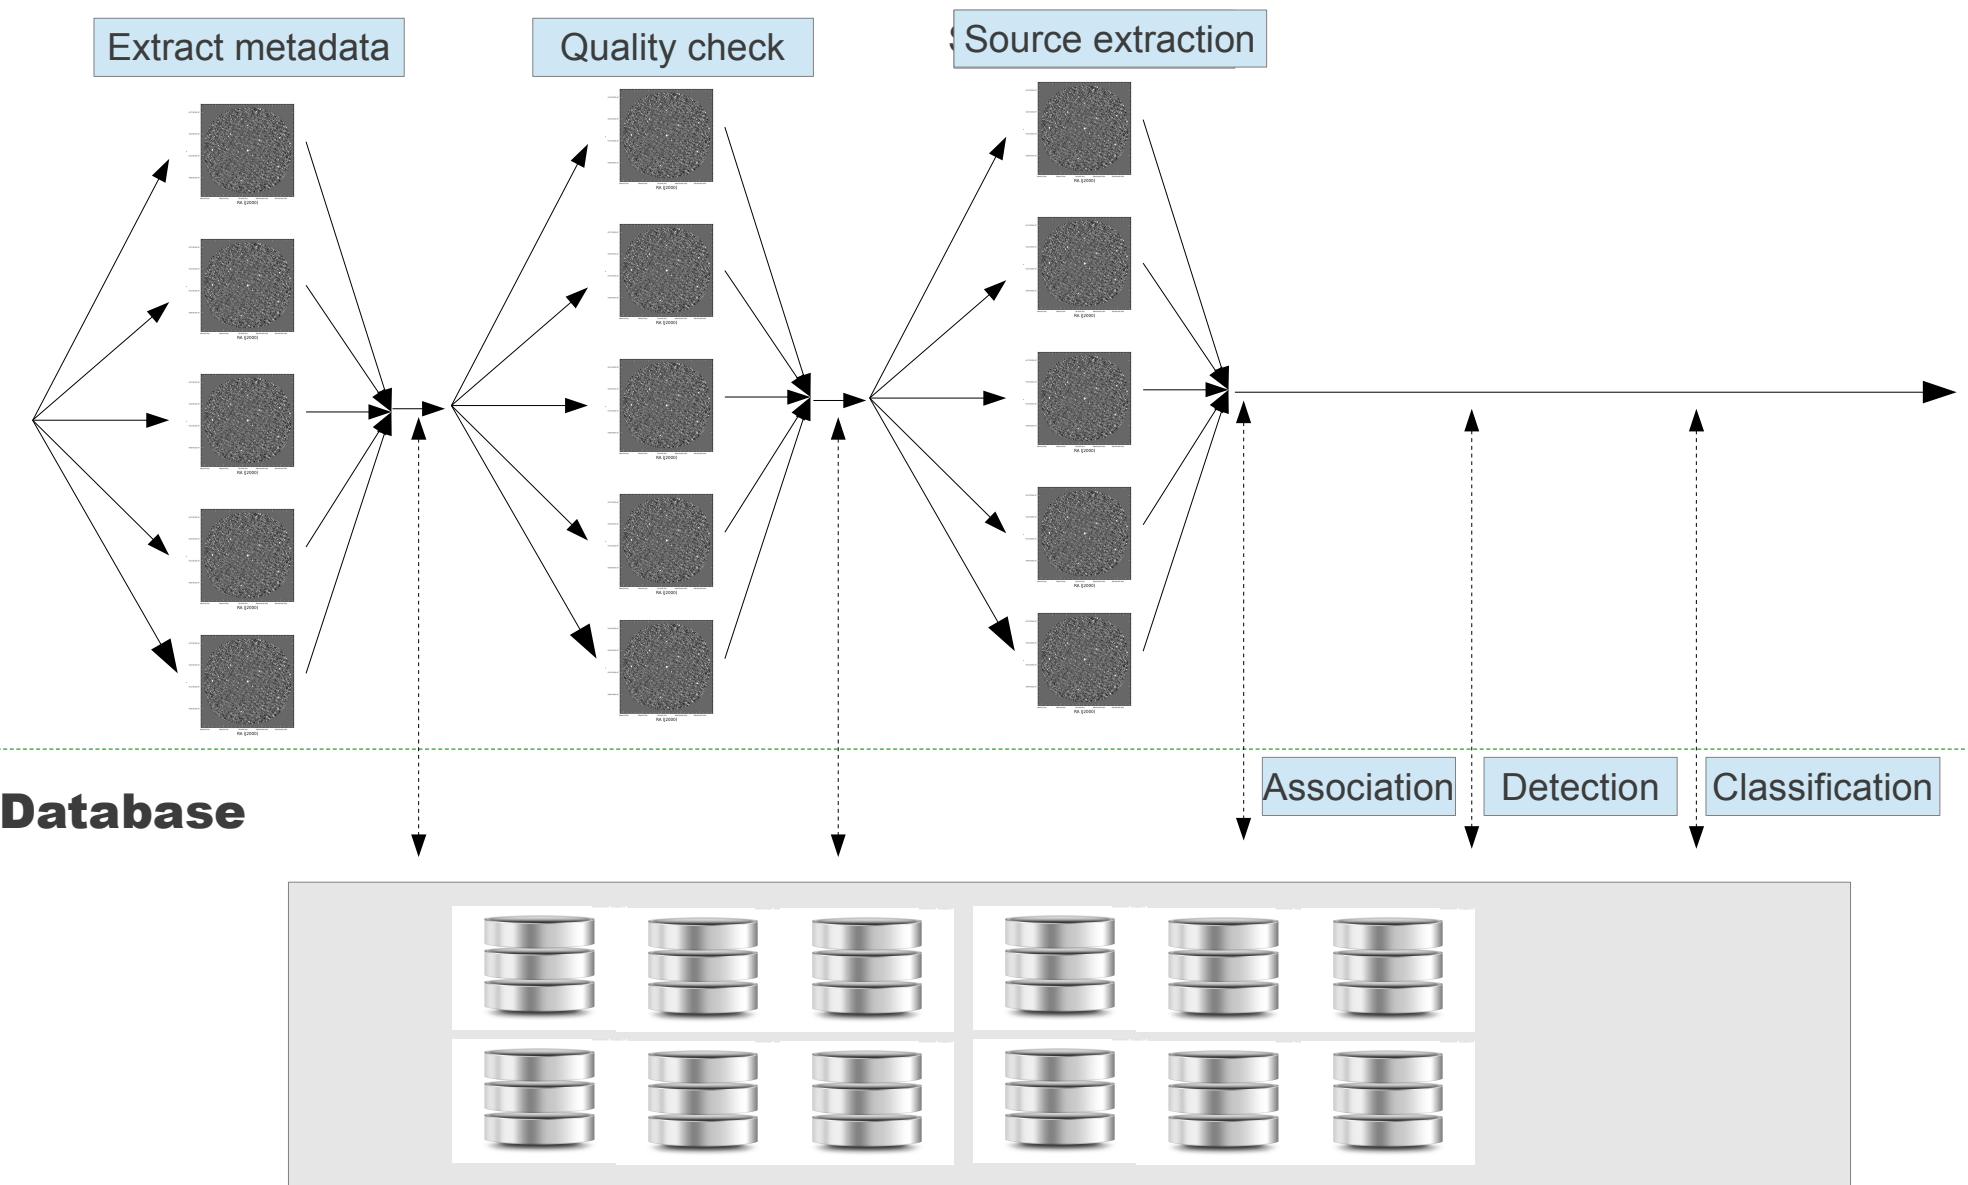

The data

- 1 datacube per second
- 10 frequency bands
- In the future 10 images per second
- In the future 4 different polarization
- Non stop

Transient detection Pipeline

- The glue
- Distributing computation
- Image processing
- Statistics
- Source extraction
- Database interactions

Distributed Computation

- Home made library
- SSH based
- Difficult to debug
- Difficult to profile
- Doing research on Celery and Hadoop

Database

- Move calculation to the data
 - Highly structured
 - Independent data
 - Naturally separable by sky coordinates
-
- ~100 TB/year
 - 10.000 insert/second

MonetDB

- Relational
- Column store DB
- Fast
- Auto tuning!
- Developers next door (CWI)

Challenges

- Debugging queries
- MonetDB still in active development

```

INSERT INTO tempbasesources
(xtrsrc_id
,datapoints
,i_peak_sum
,i_peak_sq_sum
,weight_peak_sum
,weight_i_peak_sum
,weight_i_peak_sq_sum
)
SELECT b0.xtrsrc_id
,b0.datapoints
+ 1 AS datapoints
,b0.i_peak_sum
+x0.i_peak AS i_peak_sum
,b0.i_peak_sq_sum
+x0.i_peak * x0.i_peak AS i_peak_sq_sum
,b0.weight_peak_sum
+ 1 / (x0.i_peak_err * x0.i_peak_err) AS weight_peak_sum
,b0.weight_i_peak_sum
+x0.i_peak / (x0.i_peak_err * x0.i_peak_err)
AS weight_i_peak_sum
,b0.weight_i_peak_sq_sum
+x0.i_peak * x0.i_peak / (x0.i_peak_err * x0.i_peak_err)
AS weight_i_peak_sq_sum
FROM basesources b0
,extractedsources x0
WHERE x0.image_id = @imageid
AND b0.zone BETWEEN CAST(FLOOR((x0.decl - @theta) / x0.zoneheight
) AS INTEGER)
AND CAST(FLOOR((x0.decl + @theta) / x0.zoneheight
) AS INTEGER)
AND ASIN(SQRT((x0.x - b0.x)*(x0.x - b0.x)
+(x0.y - b0.y)*(x0.y - b0.y)
+(x0.z - b0.z)*(x0.z - b0.z)
)/ 2
)
/
SQRT(x0.ra_err * x0.ra_err + b0.ra_err * b0.ra_err
+x0.decl_err * x0.decl_err + b0.decl_err * b0.decl_err)
< @assoc_r;

```

MonetDB and Python

- We maintain the MonetDB Python API
- <http://pypi.python.org/pypi/python-monetdb/>
- Problems? Ask me :)

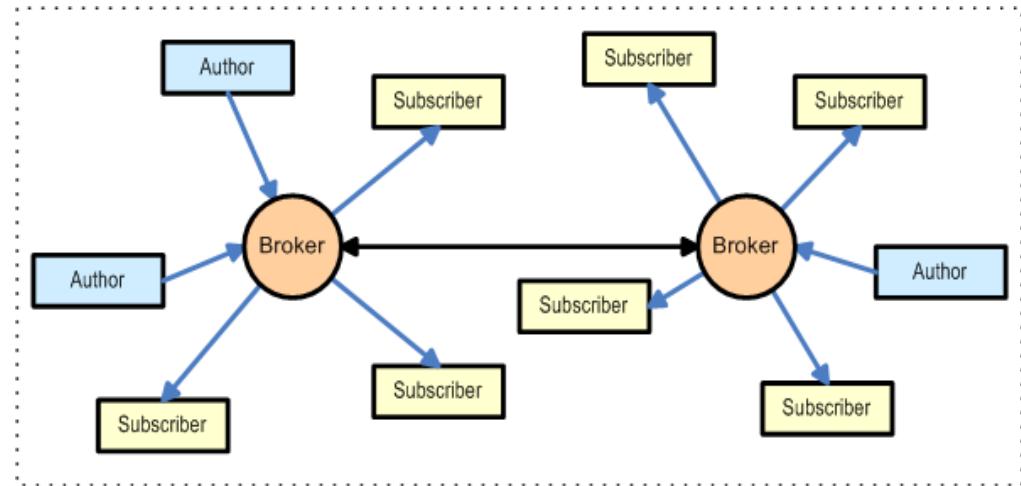

Djonet

- MonetDB backend for Django
- <https://github.com/gijzelaerr/djonet>
- brew install monetdb
- pip install python-monetdb djonet
- Contributions are welcome!

VO events

- Standardized language
- Report observations of astronomical events

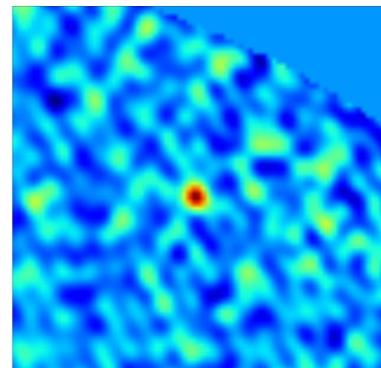

- Hey world, check this supernova out over there
- <http://comet.transientskp.org>

Visualisation

- Web interface
- Django!
- Not public (yet)

csv format

Dataset #15, L30582

Properties

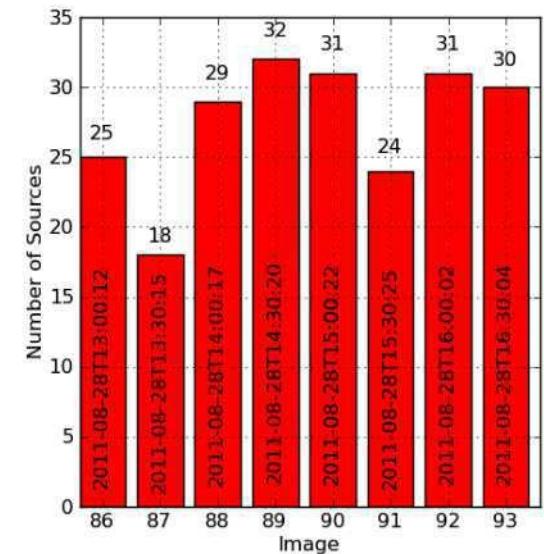

description: None
Reprocessing step: 9
processing finished: 2012-04-24T12:46:59

Details

- 11 detected transients
- 8 available images
- 61 unique sources
- 220 total detected sources
- Monitoring list

Quality control checks

Number of sources per image
