Introduction

Vimeo – About us

Who are we?

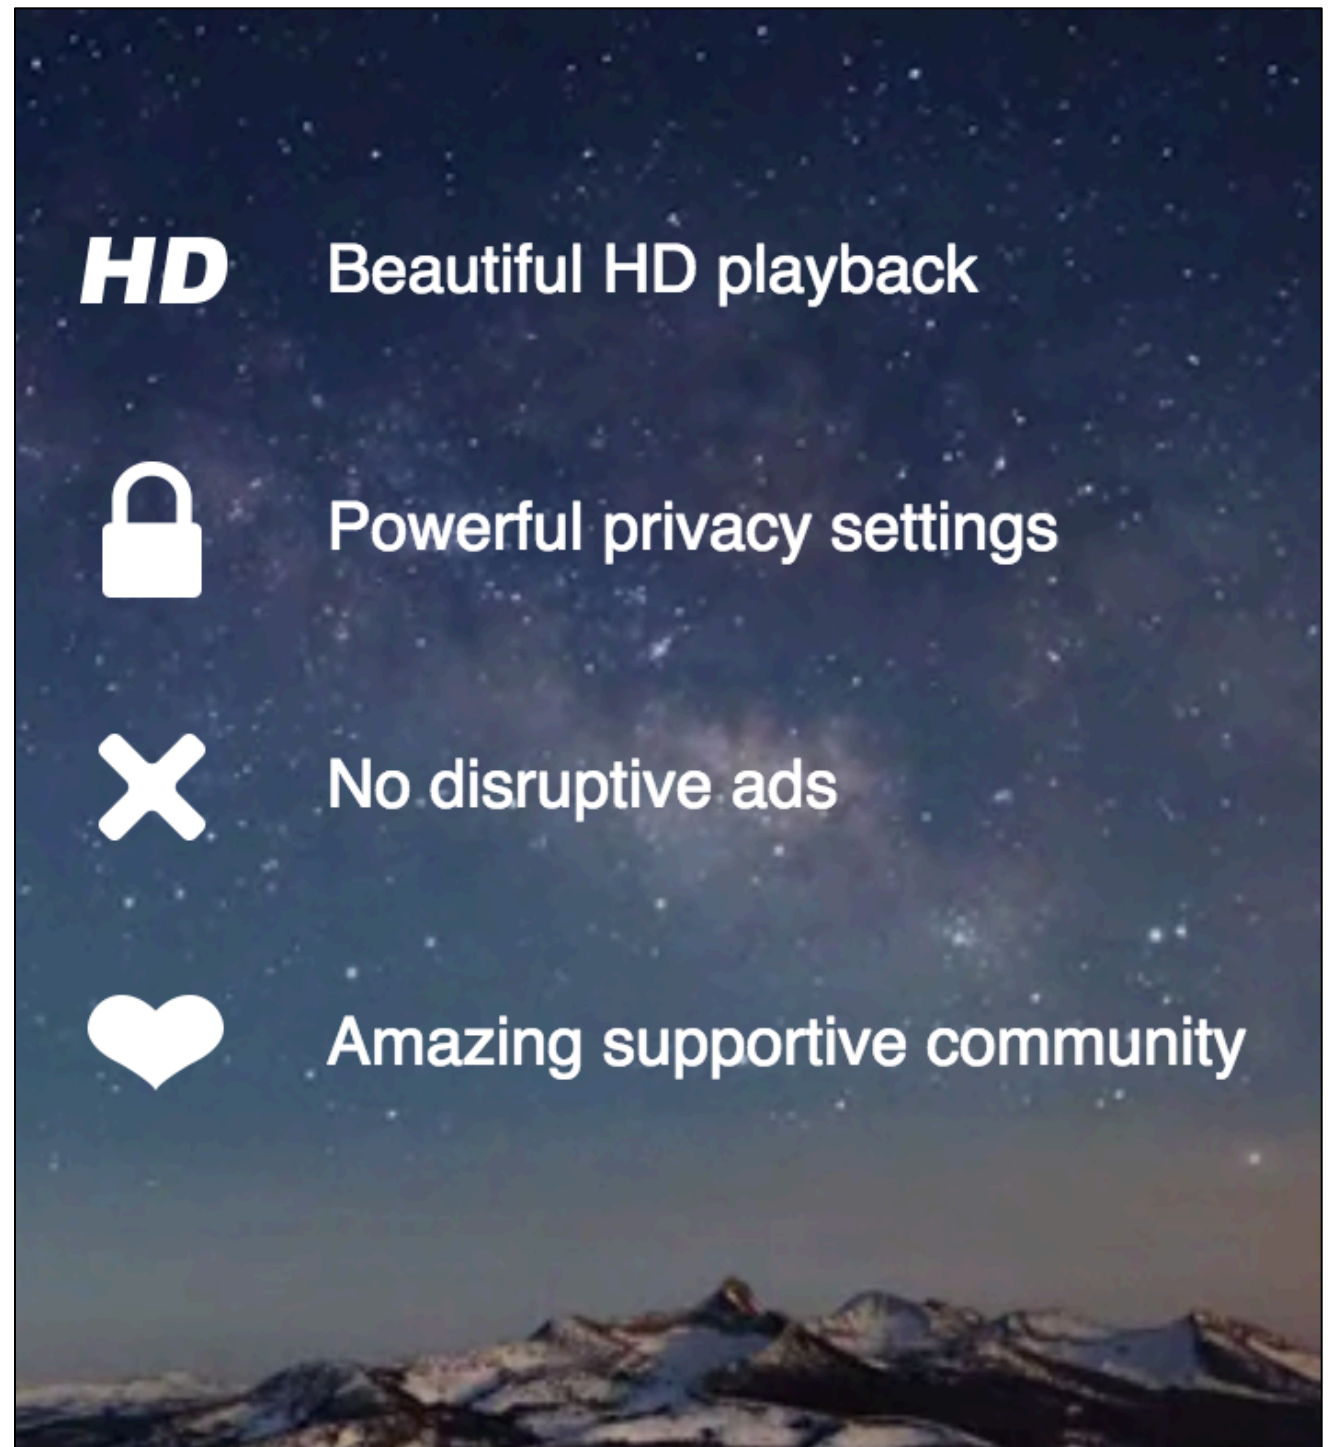

- Top 5 Video Site.
- Content Creators.
- Multimedia Hackers.
- Creative Innovators.

Vimeo – About us

What do we do?

- Transcoding and video hosting at a high level of quality.
- Create educational and entertaining content.
- Video On Demand and tools for professionals.

Vimeo – About us

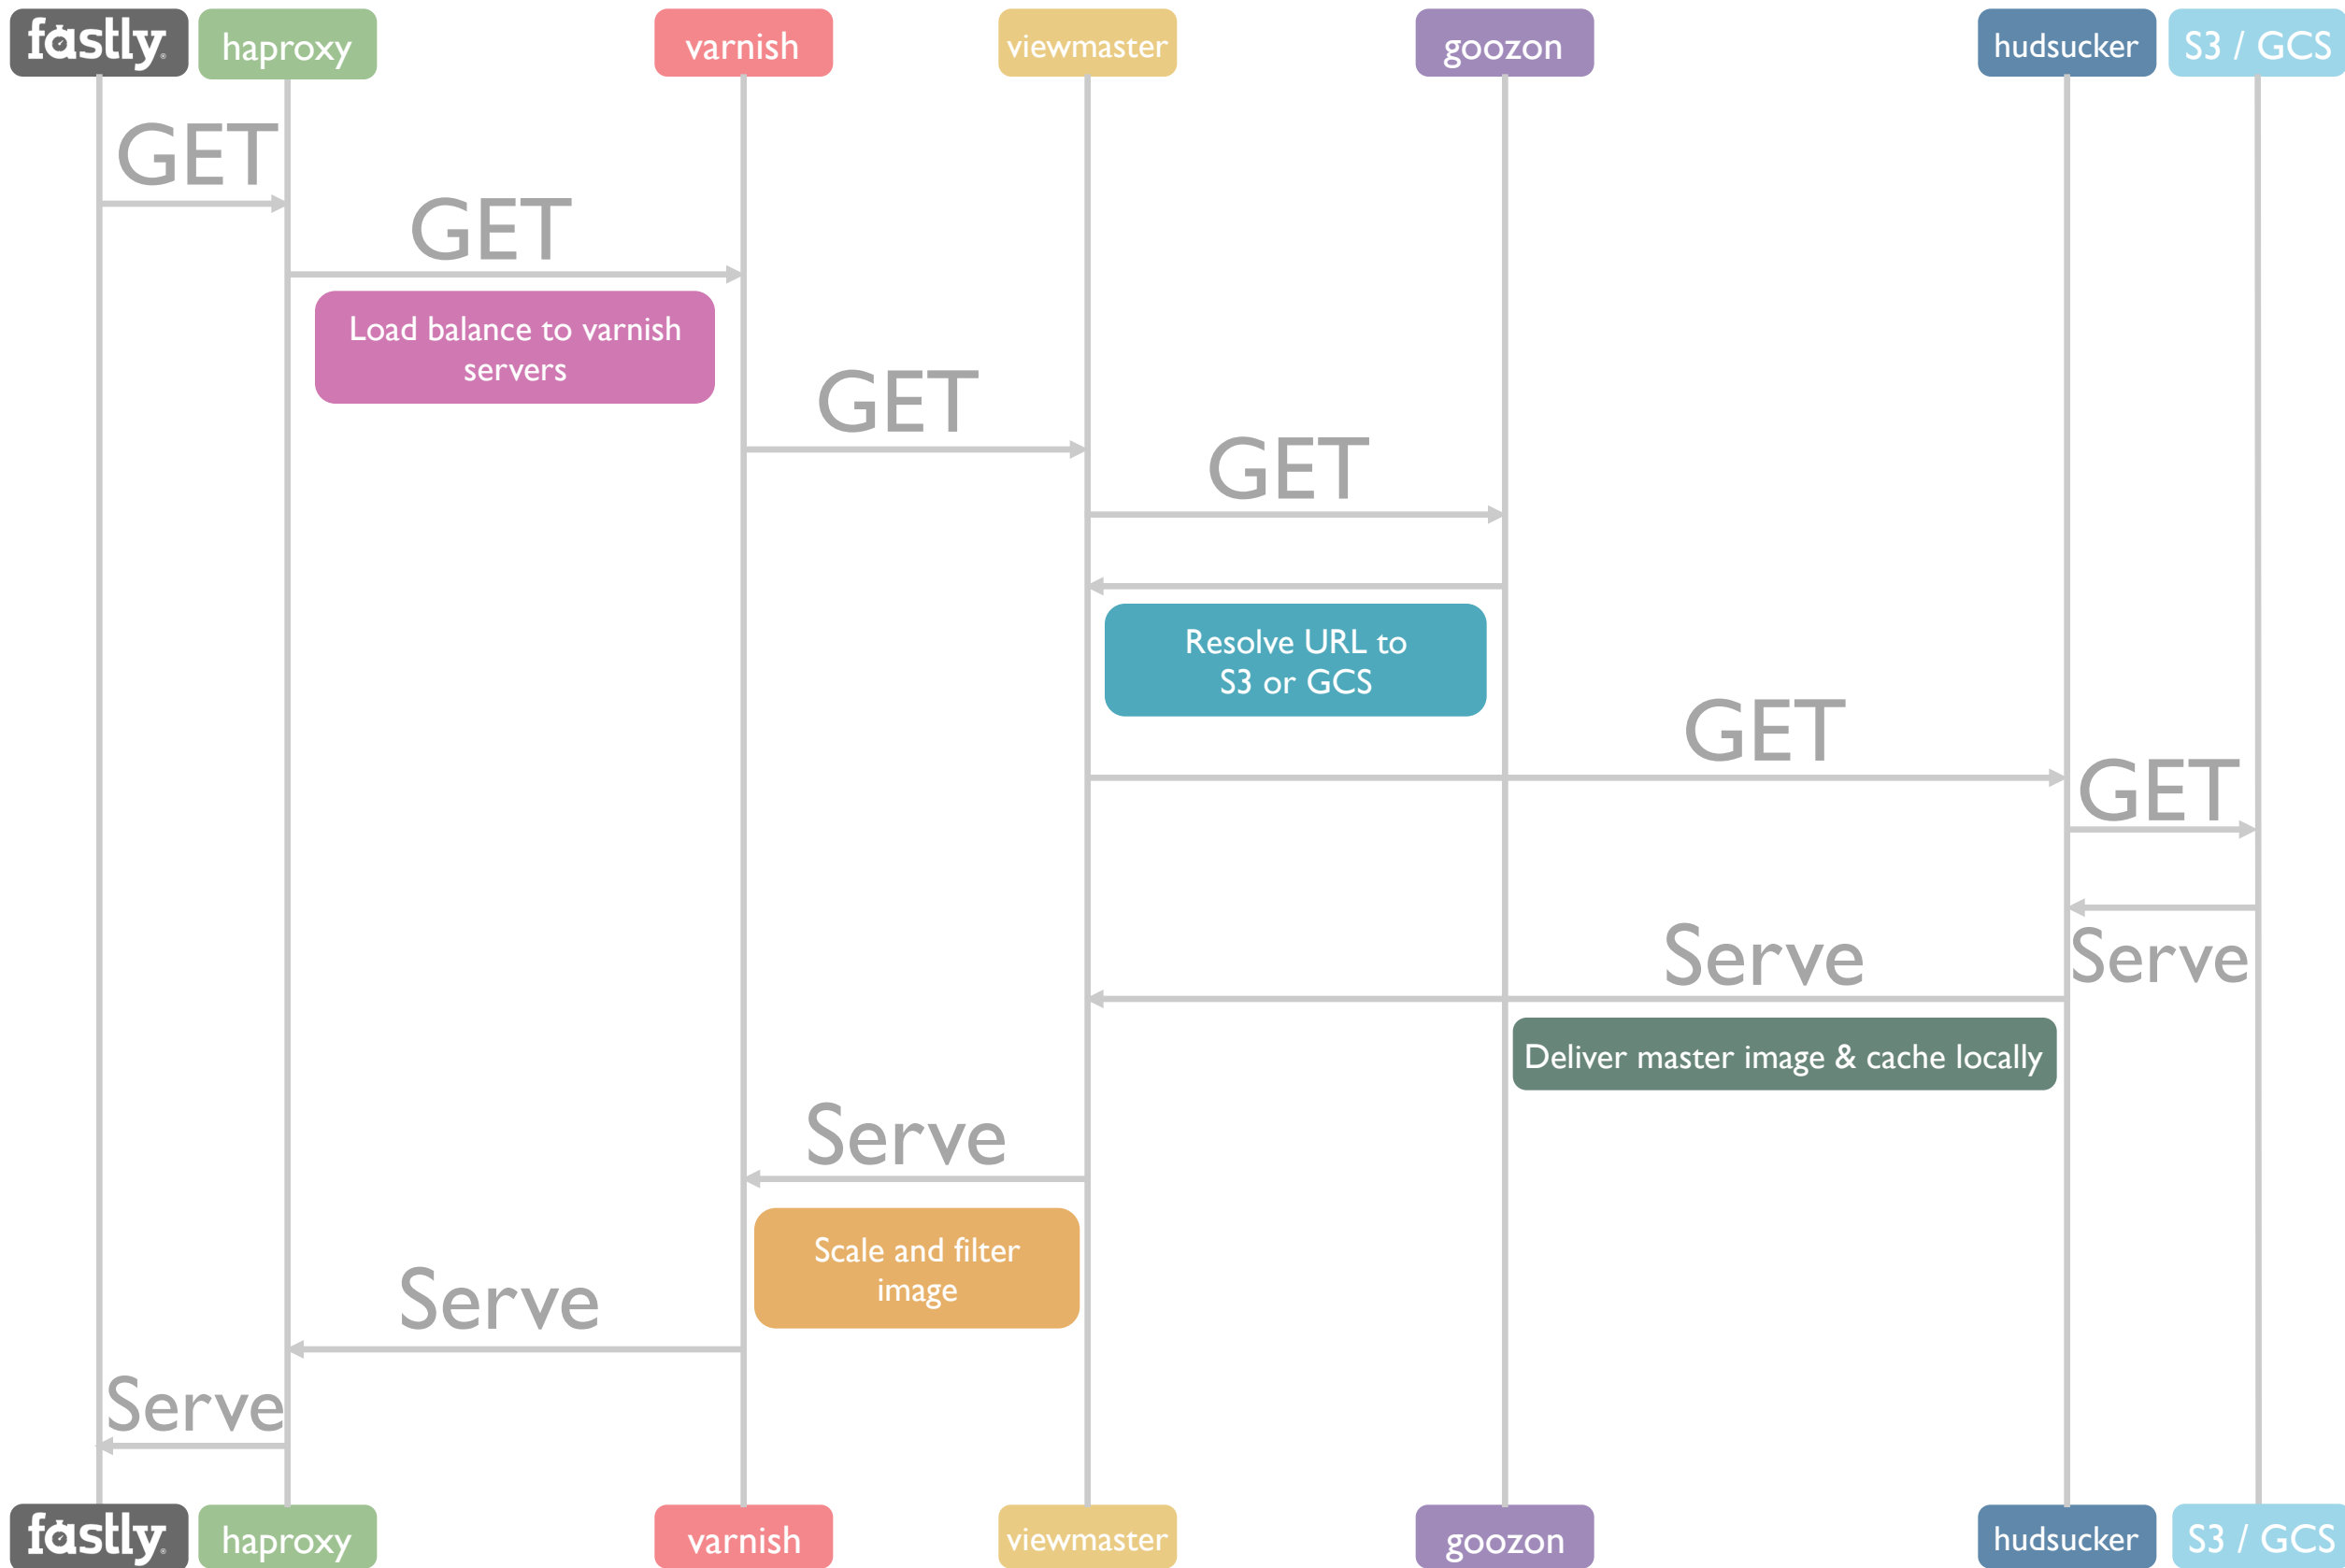

Who uses us?

- Independent artists.
- Small to Large Pros.
- Businesses.
- Regular people!

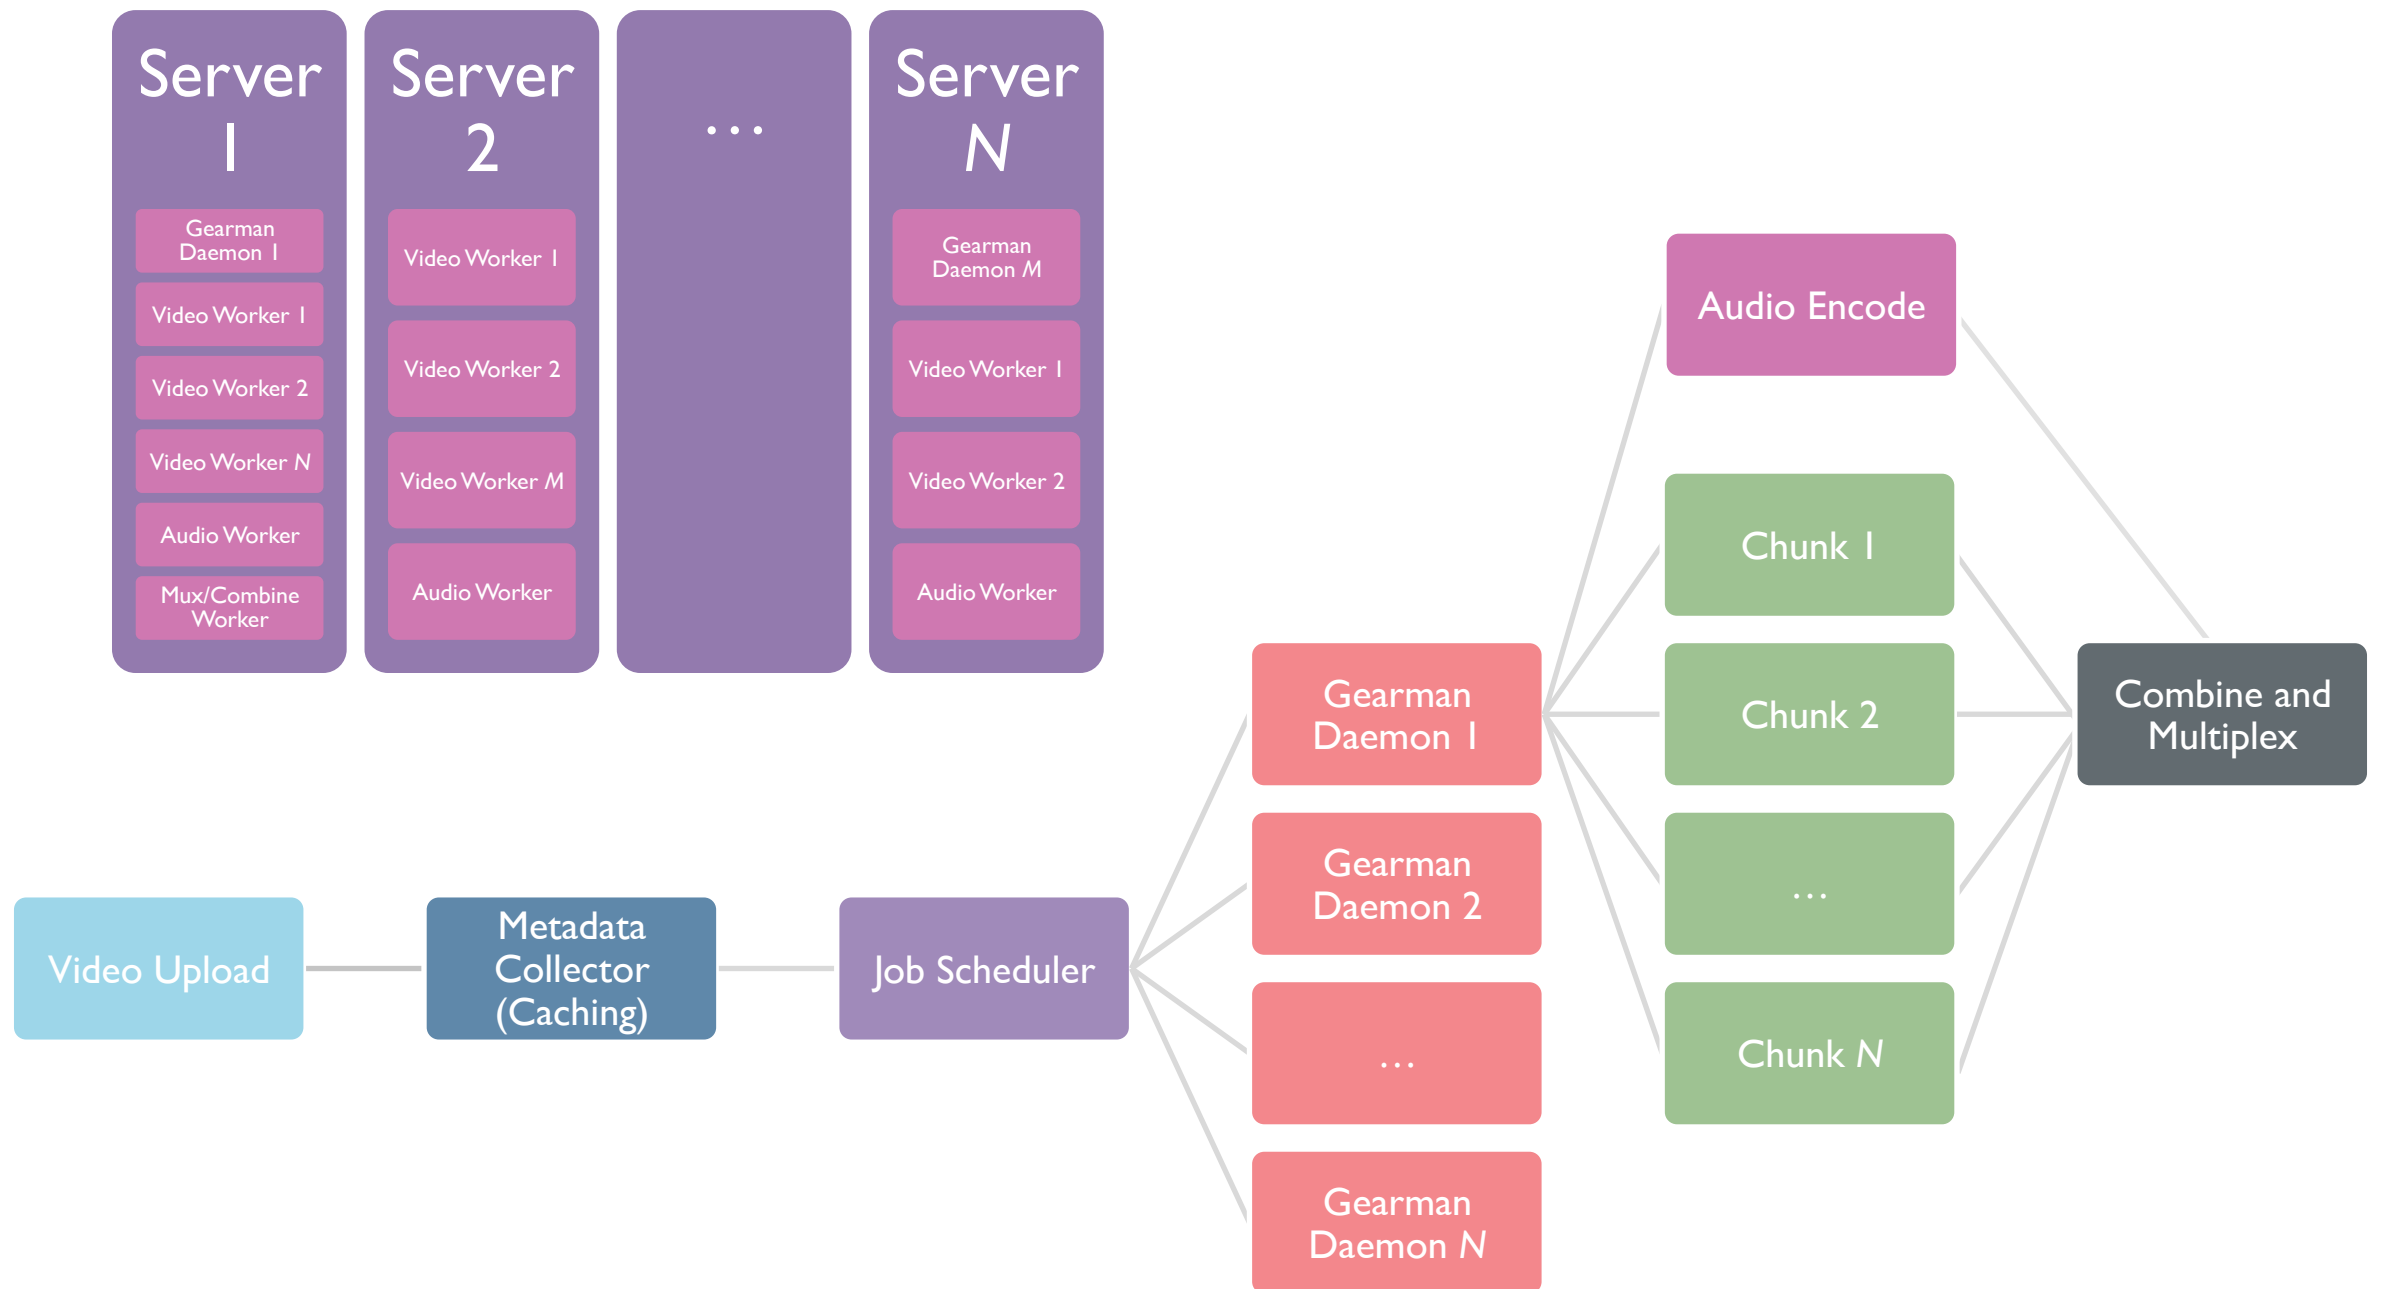

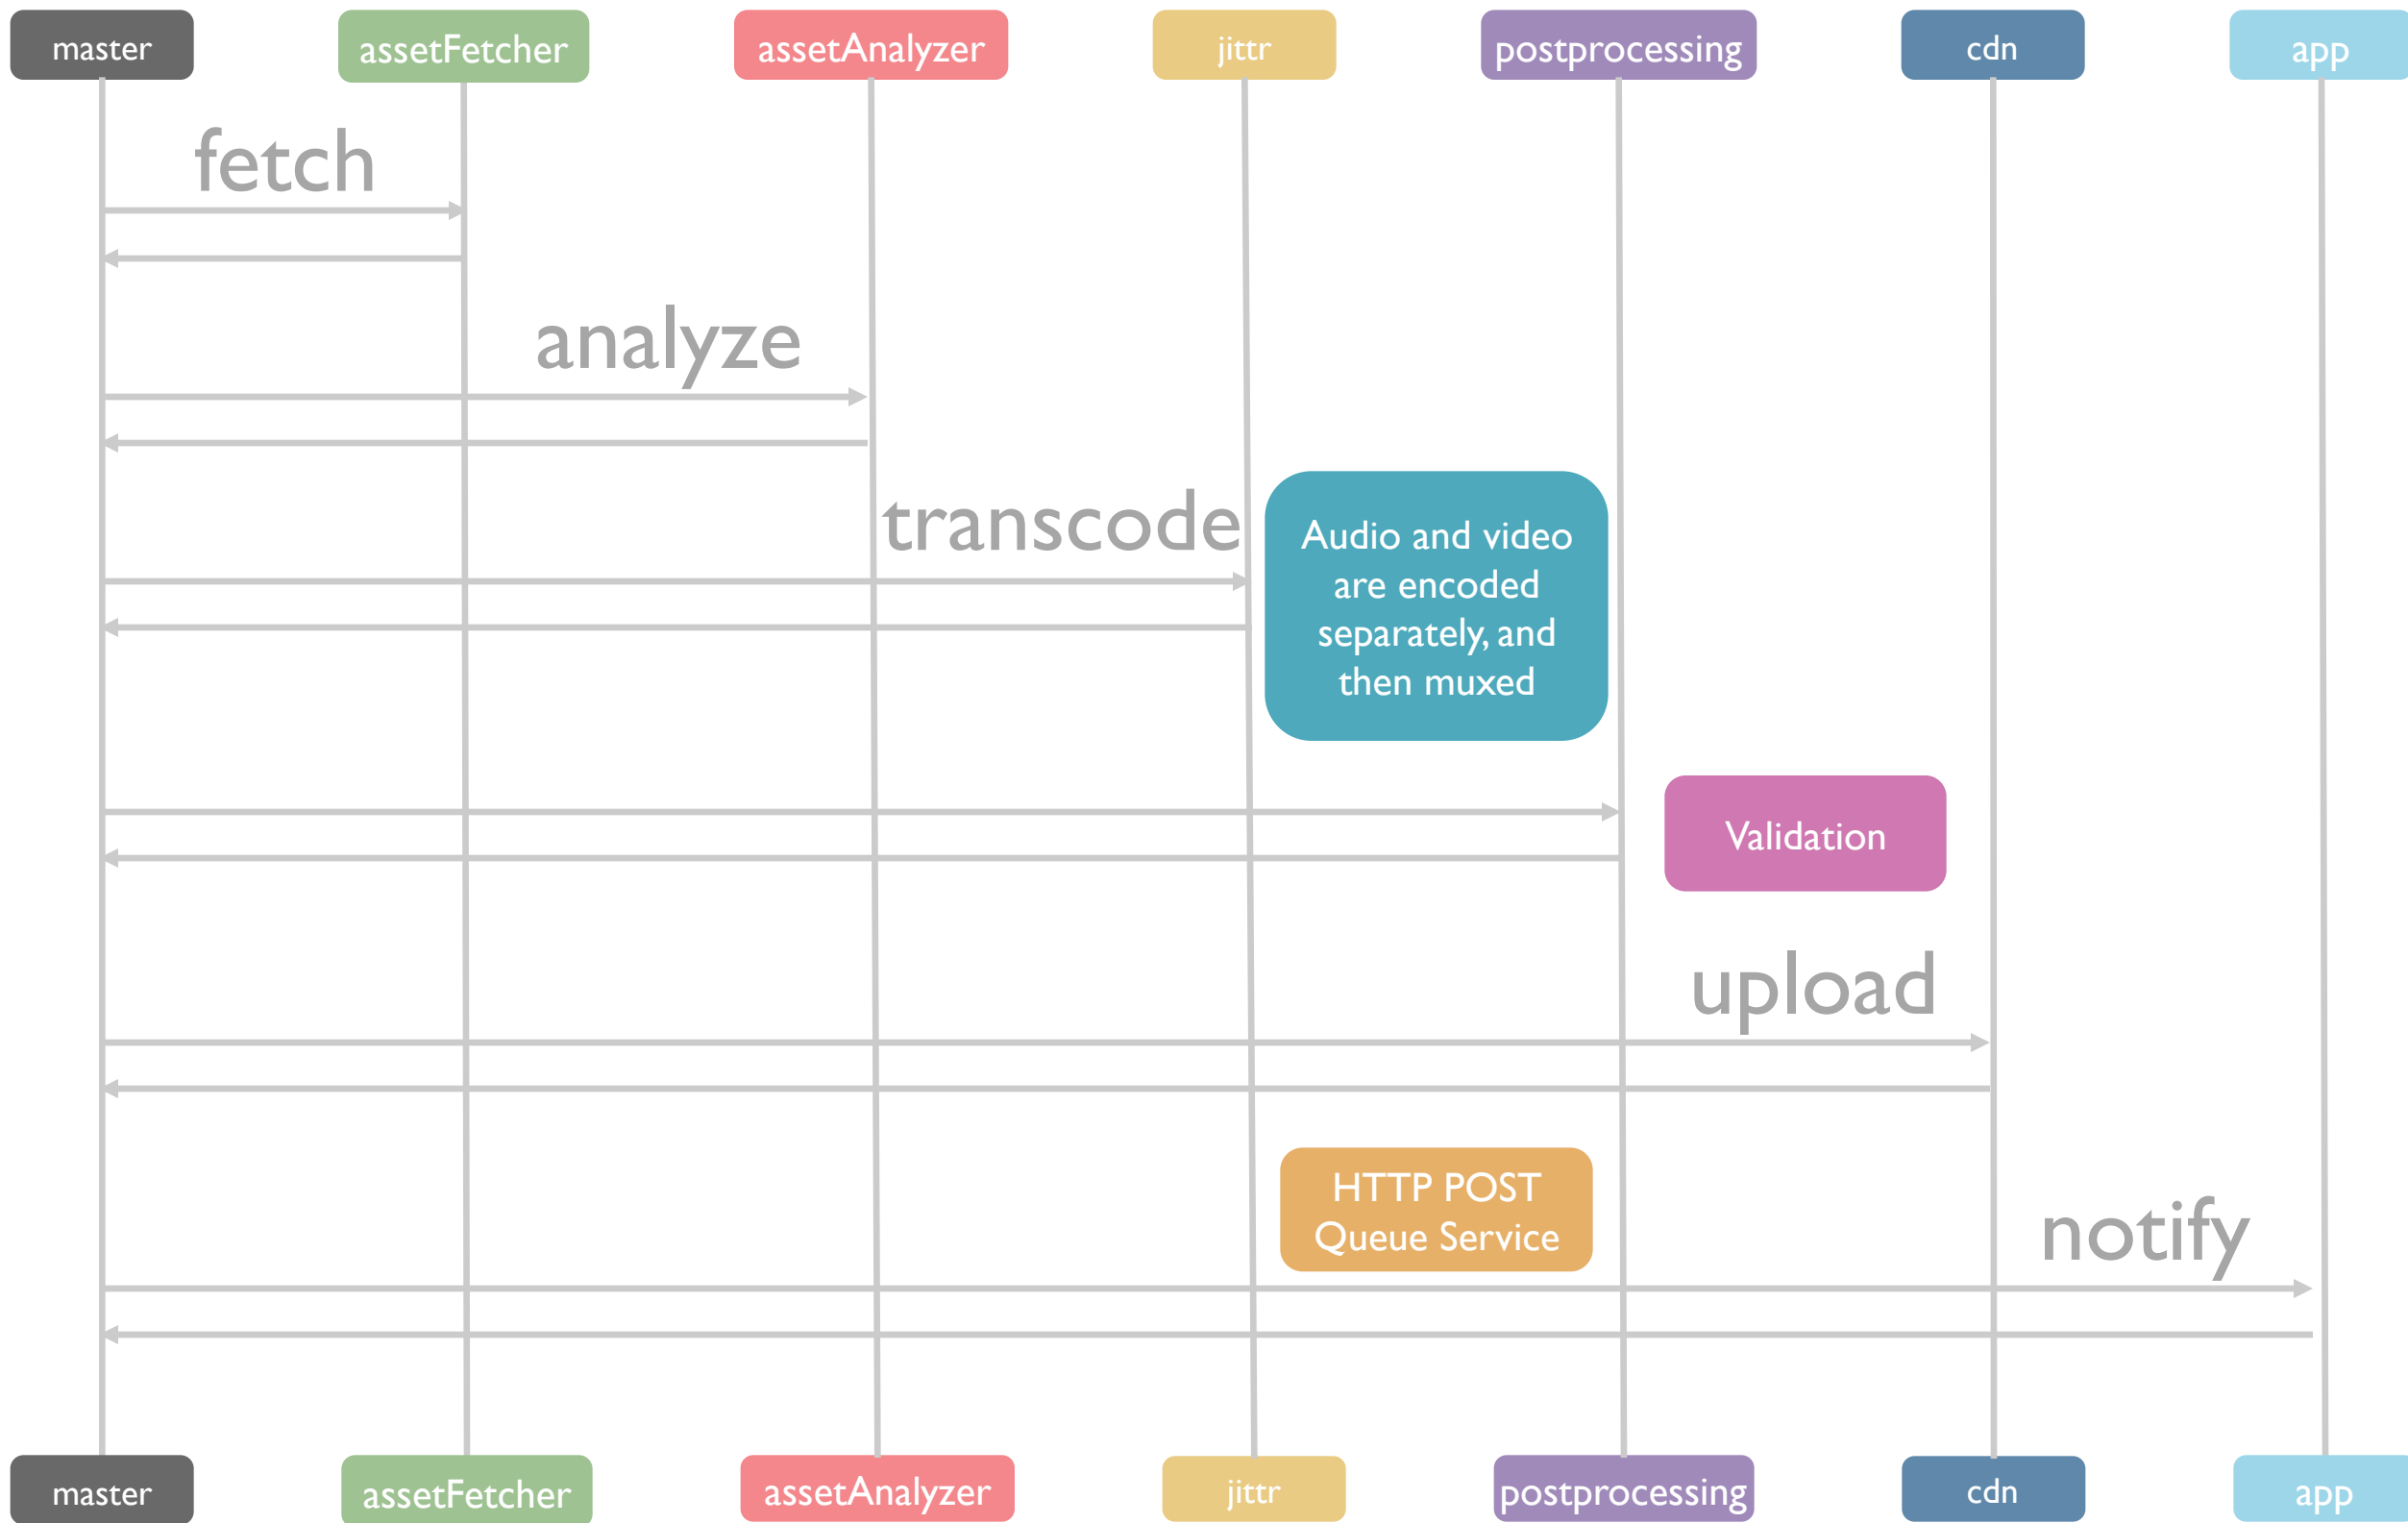

Architecture

Transcoding

Software in action

A Few Awesome Media Projects

- **Gearman** – Great distributed job server with a simple protocol usable from any language.
- **FFmpeg/Libav** – First class multimedia toolkit.
- **x264** – The Best H.264 encoder around.
- **L-SMASH** – Our preferred library for MP4 creation and demuxing/info. Rigidly strict to the specs, nice upstream developers, practical and realistic, has fewer LoC than the space shuttle.

VARNISH

Architecture

CACHE

Software in action

A Few Awesome Media Projects

- **ffms2** – Offers frame-accurate, and pre-indexed seeking using the libav* libraries, and has an easy-to-use API.
- **FDK-AAC** – Fraunhofer AAC encoder.
- **MedialInfo** – Very good probe tool.
- Many packages for **Go**.
- Many more!

 **Gearman**

X264

 **FFmpeg**

CACHE

Future Software

- **Daala** – Doing interesting, possibly great things. Definitely worth keeping an eye on.
- **DASH** – Using a Vimeo-flavored L-Smash and lavf combination.
- **x265** – Shaping up well, still not useful in production yet.
- **Opus** – Now available in MP4RA.
- **4k** – !

mpeg-DASH

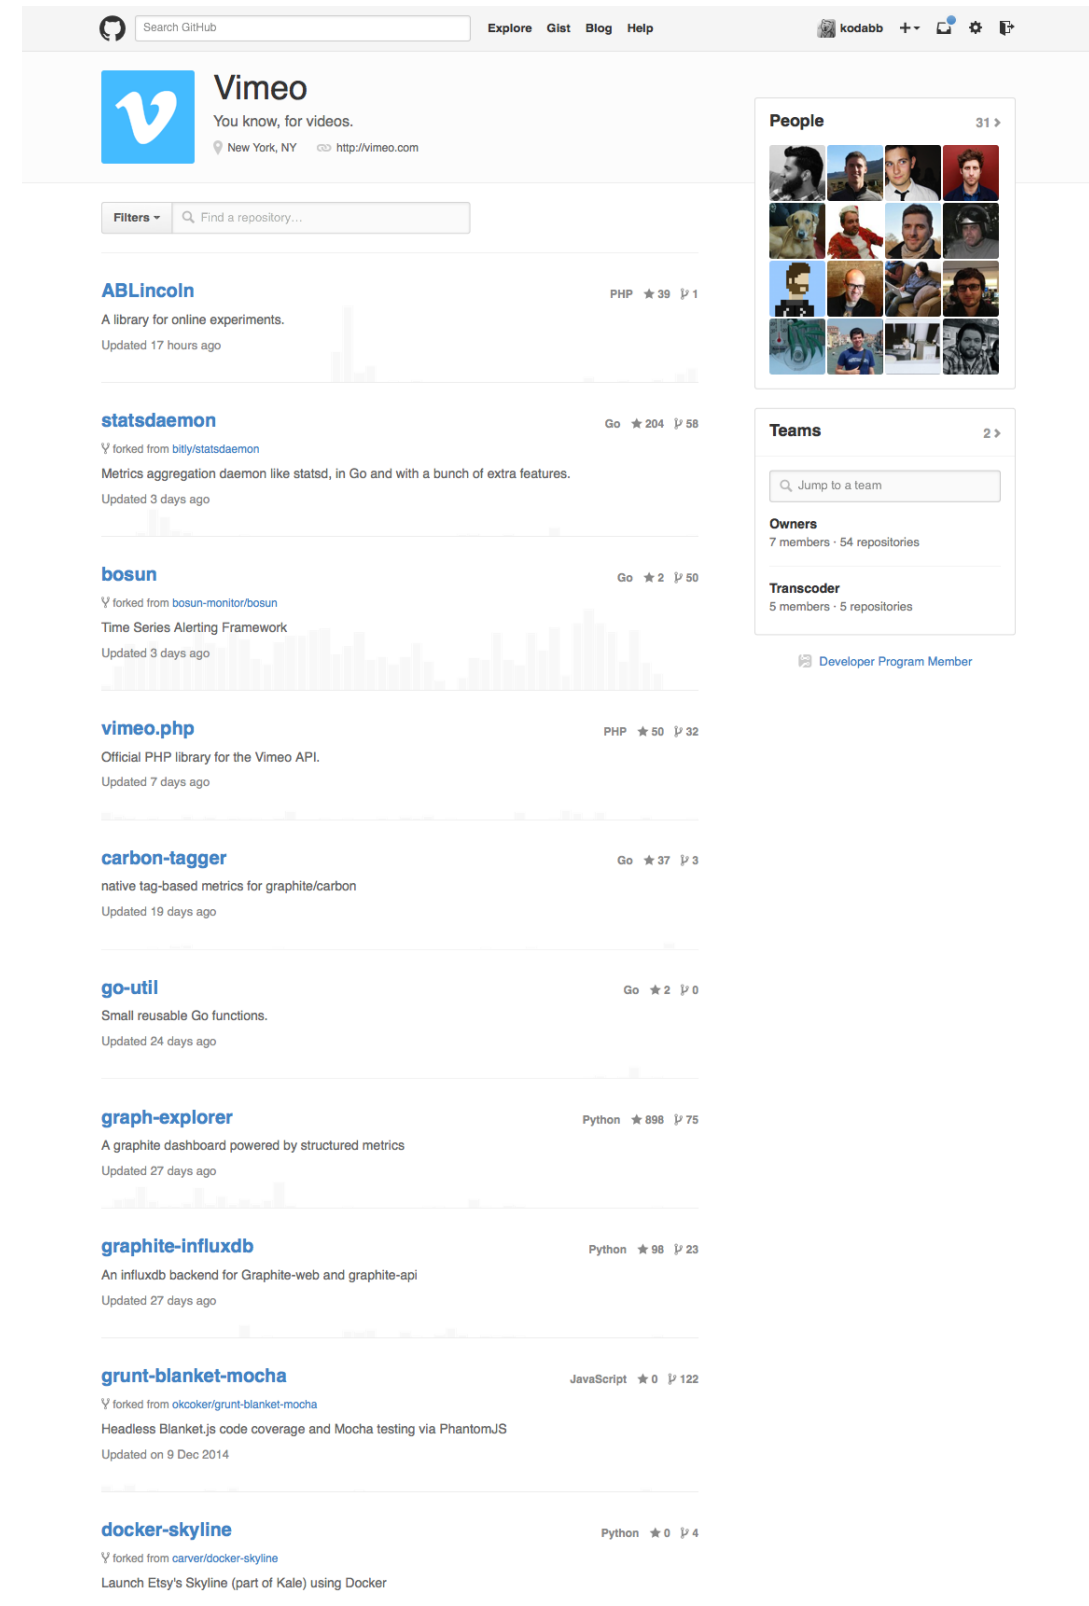

FOSS

Open Source Policies

Long Term Maintainability and Benefits

- Going against the trend, we do not use Open Source software in bad faith; we contribute bug fixes, features, and at-scale-testing back, and do not violate licenses.
- 3 of 4 members of the transcode team are or were upstream FFmpeg/Libav developers, and all are active open source contributors.
- It is not viable in the long term to fork internally, maintenance-wise, or feature-wise.
- Many things we have needed have been gladly implemented by non-employee Open Source developers who appreciate our contributions and resources.

The screenshot displays the Vimeo GitHub profile page. At the top, the Vimeo logo and name are visible, along with the tagline "You know, for videos." and location "New York, NY". Below this is a search bar and a list of repositories. The repositories listed include:

- ABLincolin**: A library for online experiments. Updated 17 hours ago. (PHP, 39 stars, 1 fork)
- statsdaemon**: Metrics aggregation daemon like statsd, in Go and with a bunch of extra features. Updated 3 days ago. (Go, 204 stars, 58 forks)
- bosun**: Time Series Alerting Framework. Updated 3 days ago. (Go, 2 stars, 50 forks)
- vimeo.php**: Official PHP library for the Vimeo API. Updated 7 days ago. (PHP, 50 stars, 32 forks)
- carbon-tagger**: native tag-based metrics for graphite/carbon. Updated 19 days ago. (Go, 37 stars, 3 forks)
- go-util**: Small reusable Go functions. Updated 24 days ago. (Go, 2 stars, 0 forks)
- graph-explorer**: A graphite dashboard powered by structured metrics. Updated 27 days ago. (Python, 898 stars, 75 forks)
- graphite-influxdb**: An influxdb backend for Graphite-web and graphite-api. Updated 27 days ago. (Python, 98 stars, 23 forks)
- grunt-blanket-mocha**: Headless Blanket.js code coverage and Mocha testing via PhantomJS. Updated on 9 Dec 2014. (JavaScript, 0 stars, 122 forks)
- docker-skyline**: Launch Etsy's Skyline (part of Kale) using Docker. (Python, 0 stars, 4 forks)

On the right side of the page, there are sections for "People" (31 members) and "Teams" (2 teams). The "Teams" section lists "Owners" (7 members, 54 repositories) and "Transcoder" (5 members, 5 repositories). A "Developer Program Member" badge is also visible.

Open Source Policies

Collaborating with the people
whose code you are benefiting
from has benefits for everyone.
Being a jerk benefits nobody.

Published Oct 1, 2014		
VIMDeeplink	Swift ★ 1	1/0
Simple Objc and Swift wrappers around the Vimeo iOS deeplink API Updated on 17 Nov 2014		
vimeo.py	Python ★ 21	1/17
Official Python library for the Vimeo API. Updated on 14 Nov 2014		
go-magic	Go ★ 2	1/0
Go Bindings for libmagic and an idiomatic API for getting a file's MIME type. Updated on 8 Nov 2014		
go-iccjpeg	Go ★ 1	1/0
A small utility package to extract ICC profiles from JPEGs. Updated on 5 Nov 2014		
go-imgparse	Go ★ 0	1/0
A small go library to efficiently parse the resolution of various image format streams. Updated on 5 Nov 2014		
go-taglog	Go ★ 3	1/0
Based on, and compatible with, the Go standard log package, but also provides additional functionality and features such as tagging. Updated on 5 Nov 2014		
vimeo.js	JavaScript ★ 23	1/6
Official Node.js library for the Vimeo API. Updated on 30 Oct 2014		
whisper-to-influxdb	Go ★ 20	1/3
migrate (import) graphite data from whisper to influxdb Updated on 16 Oct 2014		
graphite-api-influxdb-docker	Shell ★ 18	1/1
docker image with graphite-api and graphite-influxdb Updated on 2 Oct 2014		
graph-explorer-docker	Shell ★ 0	1/0
Updated on 2 Oct 2014

Good Practices

- Work with your upstream.
- Report bugs and send patches.
- Release your proprietary software.
 - ✓ *When it makes sense.*
 - ✓ *With an appropriate license.*
- Get your code across as many projects as possible.
- Accept patches.

Bad Practices

- Ignoring bug reports.
- Using an Open Source repository as a code dump.
- “Fork and forget”.
- Claiming ownership of a project.
- Complex CLA.

Conclusions

Advice

- Do not be afraid of using Open Source software.
- Do not be shy of admitting you use Open Source software.
- Do not ignore your Open Source community.
- Do not get involved in Open Source politics.

Quote

“Not everything that can be counted counts,
and *not everything that counts can be
counted.*” - Albert Einstein

Thanks for your attention
