## Trough of **disillusionment**

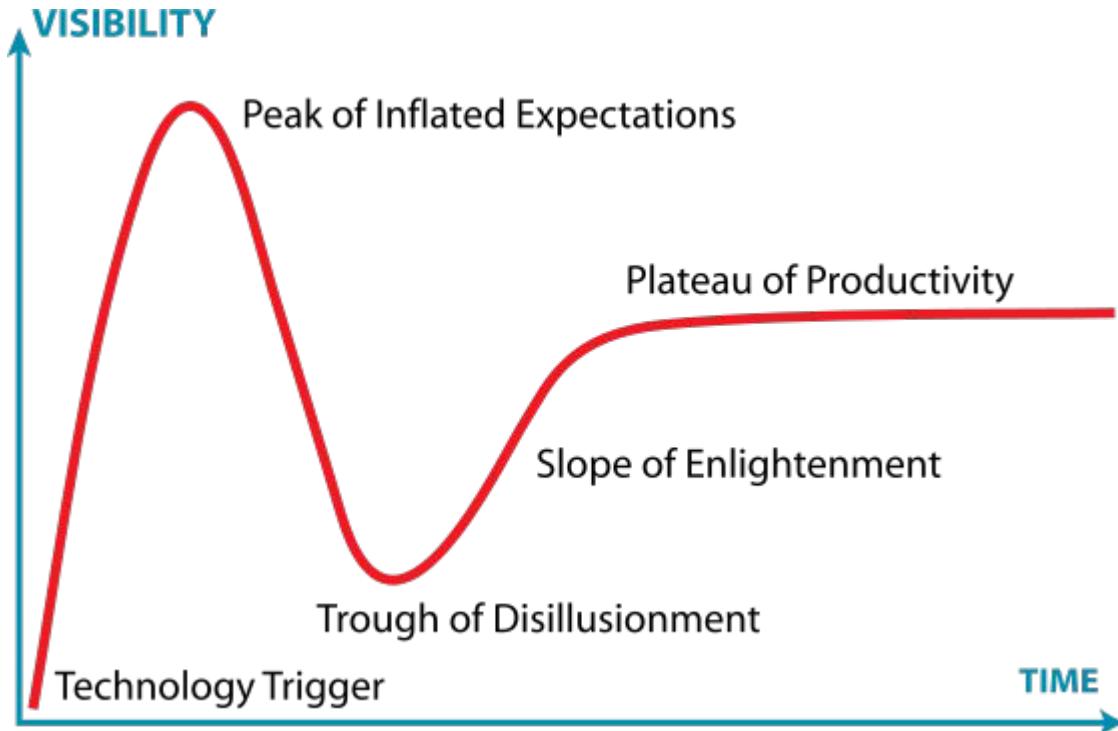

- ▶ Peak of inflated expectations
- ▶ Trough of disillusionment
- ▶ Plateau of productivity

# GARTNER'S HYPE CYCLE

The Hype Cycle is a **branded graphical presentation** developed and used by US Information Technology (IT) research and advisory firm Gartner for representing the **maturity, adoption** and **social application** of specific technologies.

Thank you Wikipedia!

# GARTNER'S HYPE CYCLE

## Peak of inflated expectations

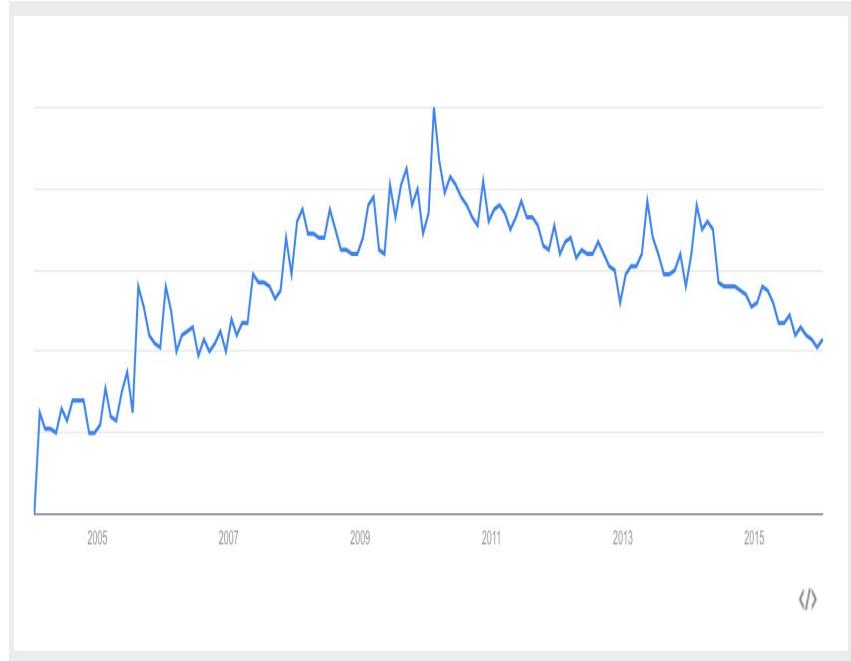

We over-promised:

- ▶ Jingle: voice & video
- ▶ PubSub
- ▶ Generic bus

# Trough of disillusionment

- ▶ XML vs JSON
- ▶ Still not mobile
- ▶ Inline media

Same **feeling everywhere**:  
stackoverflow, hacker news, reddit, quora, slashdot, etc.

# Plateau of productivity

- ▶ Community revival
- ▶ Emergence
- ▶ Clean up

# Peak of inflated expectations

Community “mea culpa”

# Trough of disillusionment

Is it over yet?

# Plateau of productivity

Wake up call

## A bit of **cleanup**

- ▶ Obsolescence
- ▶ Optimisations,  
simplifications
- ▶ Implementors

# Obsolescence

- ▶ Lots of implementations are:
  - ▷ Obsolete
  - ▷ Unmaintained
  - ▷ Uneven
- ▶ The overall feeling is not right

# Optimisations, simplifications

Great progress has been made, just not enough:

- ▶ Simple Reconnection
- ▶ 3rd generation features
  - ▷ Ubiquitous MAM & Carbons
  - ▷ Inline media
  - ▷ Archive search
  - ▷ Correction with archiving
  - ▷ Presenceless group chat

# Implementors

- ▶ XSF and standards are not enough
- ▶ Network of implementors

# Obsolescence

Another dimension

# Simplifications

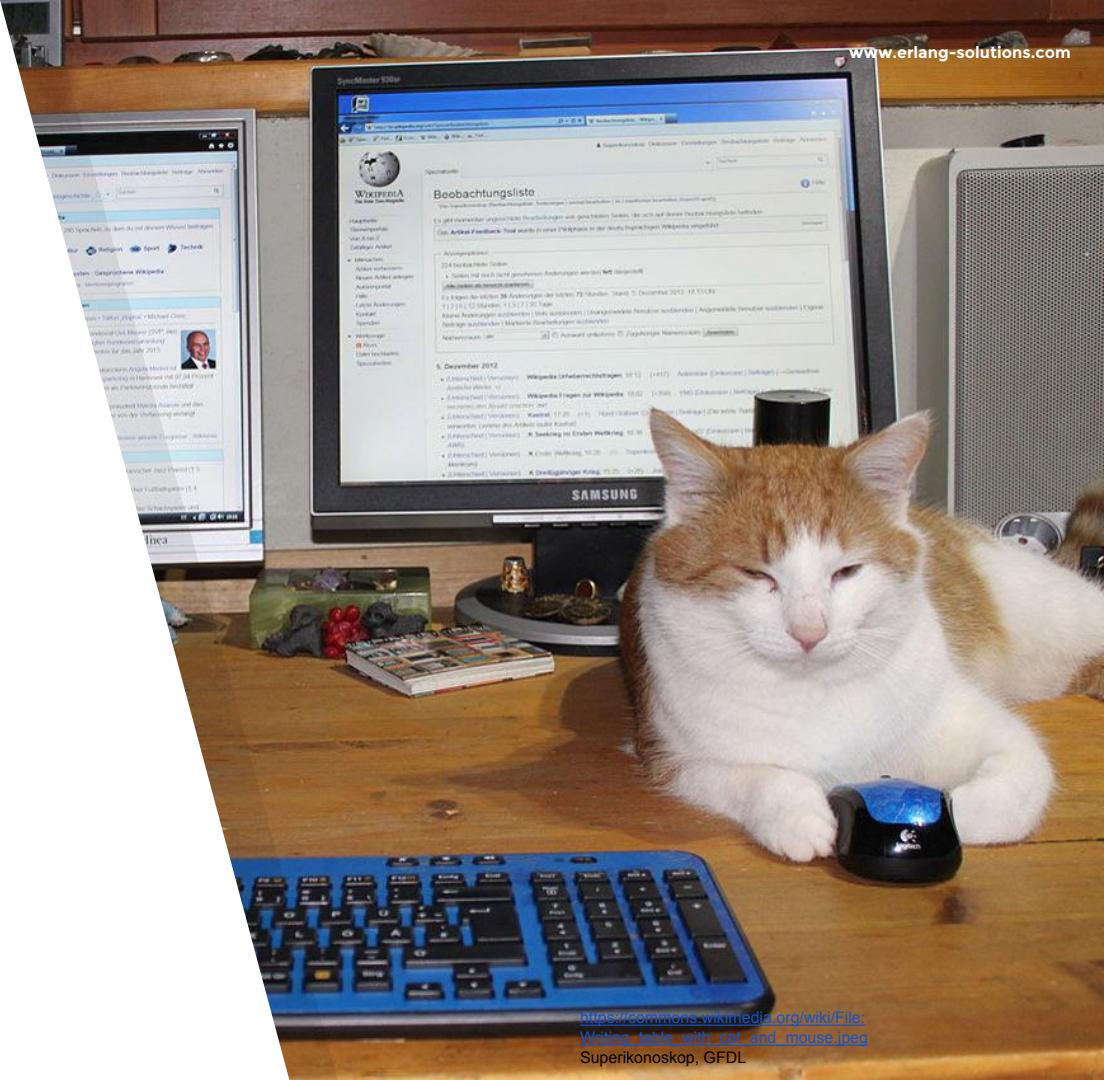

Even cats love mobile!

# Implementors

Even cats code!
