# imacat / Yang Shih-Ching

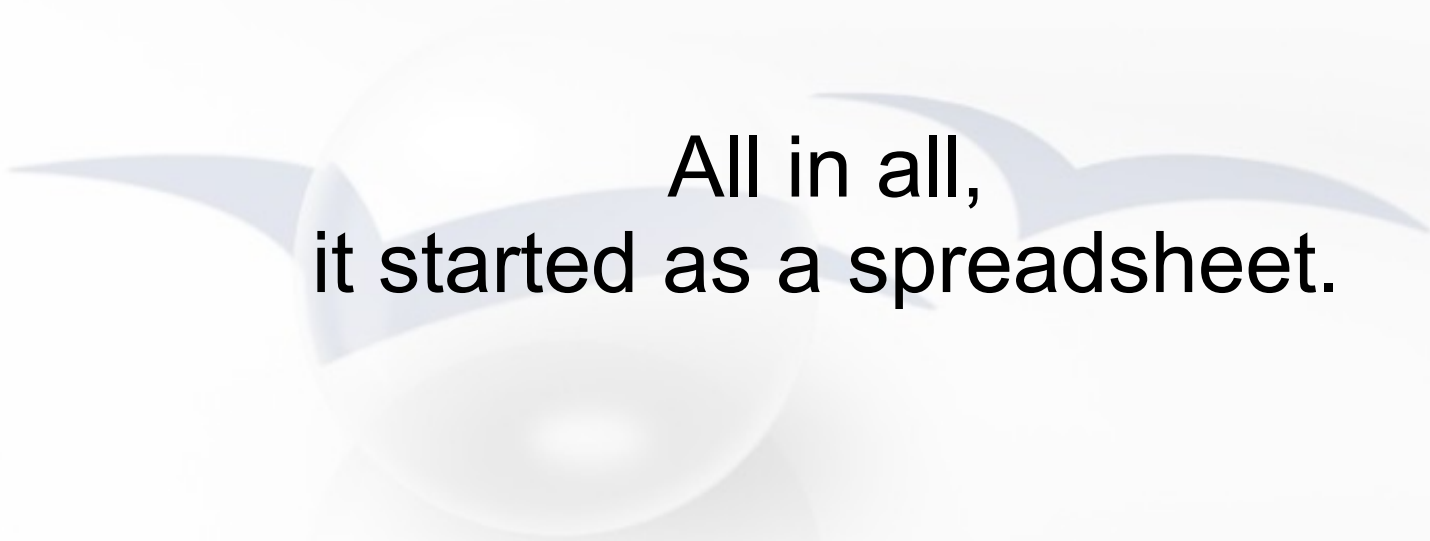

---

- Taiwan OpenOffice/LibreOffice community
- Apache OpenOffice PMC
- Women in FOSS in Taiwan
- A game player for almost three decades.
  - MS-DOS, Windows 95, 98, Linux Steam
  - PC game, MUD, Wii, mobile games
  - My favorite genre: RPG

All in all,  
it started as a spreadsheet.

# A Spreadsheet

- A spreadsheet is a convenient place to store data.

	A	B	C
1	Name	Age	Score
2	Jean Perry	19	67
3	Timothy Powell	16	52.6
4	Janice Jenkins	15	55.4
5	Craig Long	16	62.6
6	Jeremy Wilson	20	92.6
7	Steven Alexander	17	66.3
8	Irene Watson	16	95.5
9	Shirley Patterson	18	60.5
10	Jennifer Williams	15	74.6
11	Johnny Bennett	22	68.9
12	Tammy Cooper	18	72
13	Laura Thomas	17	88.8
14	Gary Adams	22	51.7
15	Juan Turner	22	84.2
16	Evelyn Hernandez	21	83.6

# A Spreadsheet

- You don't have to worry about the meta-data: data types, size, precision, etc.

LONG?  
DECIMAL(4,2)?  
INT?  
VARCHAR(32)?  
VARCHAR(64)?  
DOUBLE?

I use spreadsheets to store all kinds of daily information.

For example, ...

# Journal Account

	A	B	C	D	E	
1	Date	Summary	Income	Expense	Balance	
2	2017/1/4	Lunch		\$4	\$8,476	
3	2017/1/4	Bus		\$3	\$8,473	
4	2017/1/5	Salary	\$1,800		\$10,273	
5	2017/1/5	Lunch		\$3	\$10,270	
6	2017/1/5	Coffee		\$3	\$10,267	
7	2017/1/5	Shoes		\$40	\$10,227	
8	2017/1/5	Eggs		\$2	\$10,225	
9	2017/1/6	Lunch		\$4	\$10,221	
10	2017/1/6	Bus		\$3	\$10,218	
11	2017/1/6	Milk		\$4	\$10,214	
12	2017/1/7	Lunch		\$3	\$10,211	
13	2017/1/7	Bus		\$3	\$10,208	

# Students' Scores

	A	B	C	D	E

Now it goes for Pokémon GO.

# Pokémon GO CP & IV

- In Pokémon GO, every Pokémon has its CP (combat power), that indicates how strong it is.

# Pokémon GO CP & IV

**CP 576**

**CP 445**

- We often compare Pokémon by their CP to know which one is stronger than the other.

# Pokémon GO CP & IV

- Some species are just stronger than others.

# Pokémon GO CP & IV

CP 1594

CP 1555

- But even within the same species, their CP may still be different. They are still different from one another.

# Pokémon GO CP & IV

- Base stats

- Pokémon of the same species share the same set of base stats.

- Pikachu

- Base Attack: 112
- Base Defense: 101
- Base Stamina: 70

- Slowbro

- Base Attack: 177
- Base Defense: 194
- Base Stamina: 190

# Pokémon GO CP & IV

---

- Individual values (IV)
  - In addition, Pokémons have their own individual values (IV). IV are added to the base stats. They range from 0 to 15.
    - IV Attack: 0~15
    - IV Defense: 0~15
    - IV Stamina: 0~15

# Pokémon GO CP & IV

- Level
  - Pokémon also have their levels. Levels are indicated by the arc below CP.

# Pokémon GO CP & IV

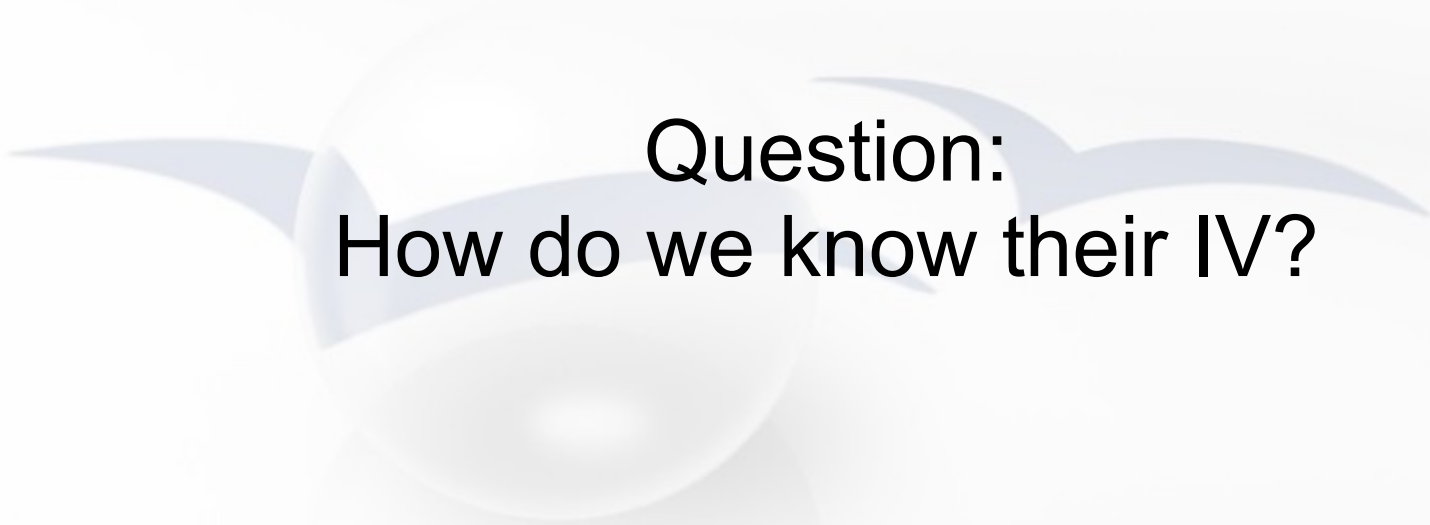

- Level
  - Levels are advanced by “Power Up”.
  - Each “Power Up” advanced the level by 0.5.

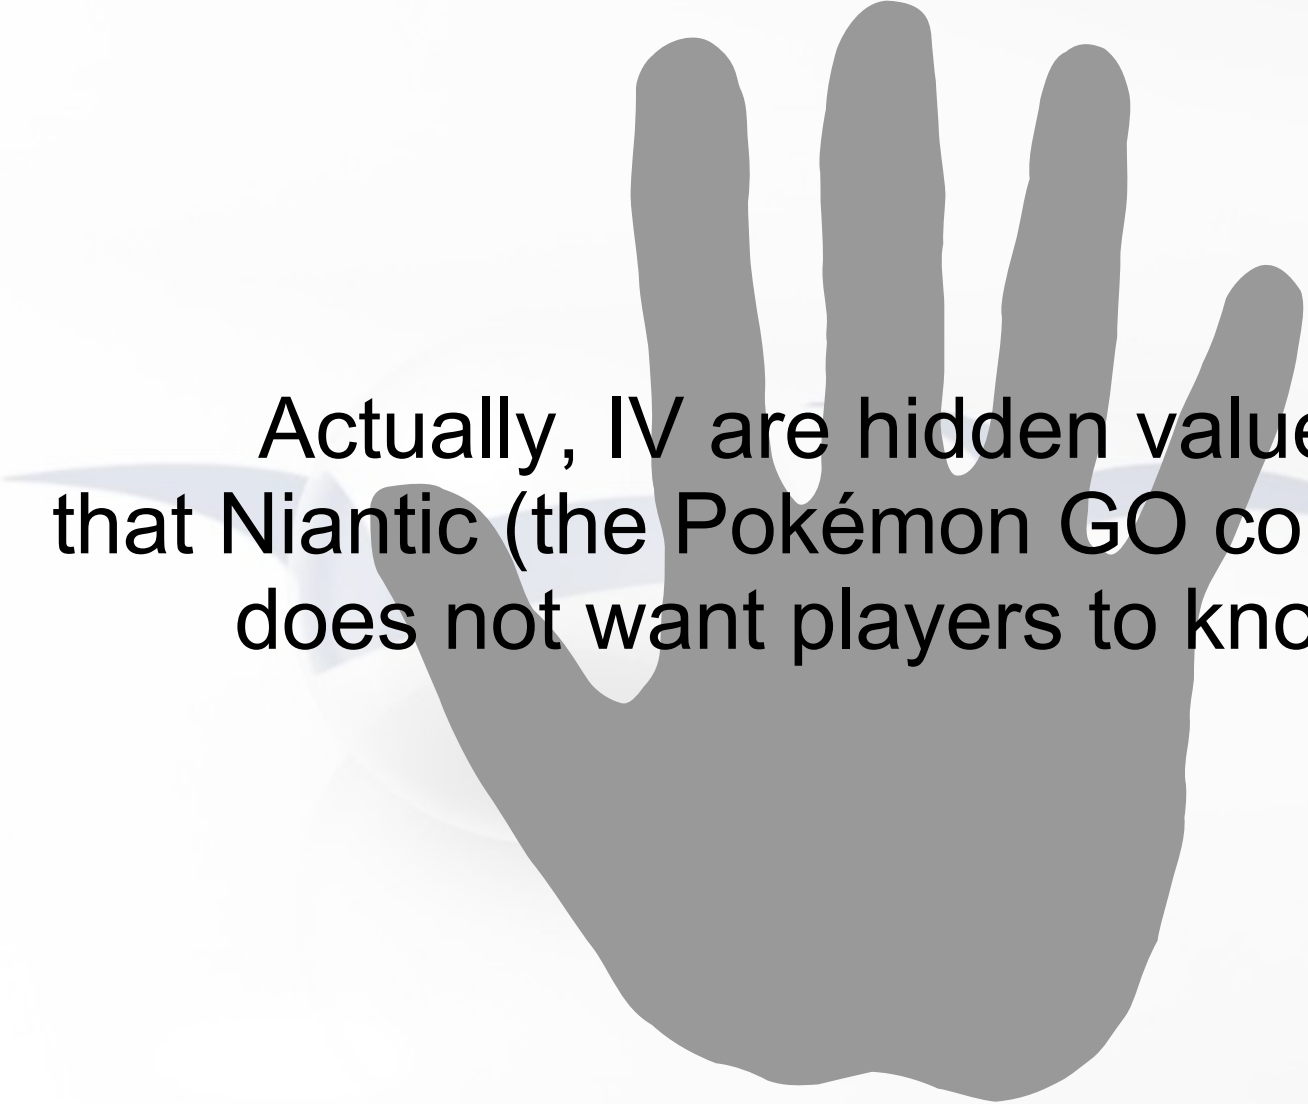

# Pokémon GO CP & IV

- To get the strongest Pokémon, we...
  1. Choose strong species with high base stats;
  2. Within a species, pick the Pokémon with highest IV;
  3. Power up to maximum advance its level.

Question:  
How do we know their IV?

Actually, IV are hidden values that Niantic (the Pokémon GO company) does not want players to know.

You will be banned  
if you are found to peep the IV.

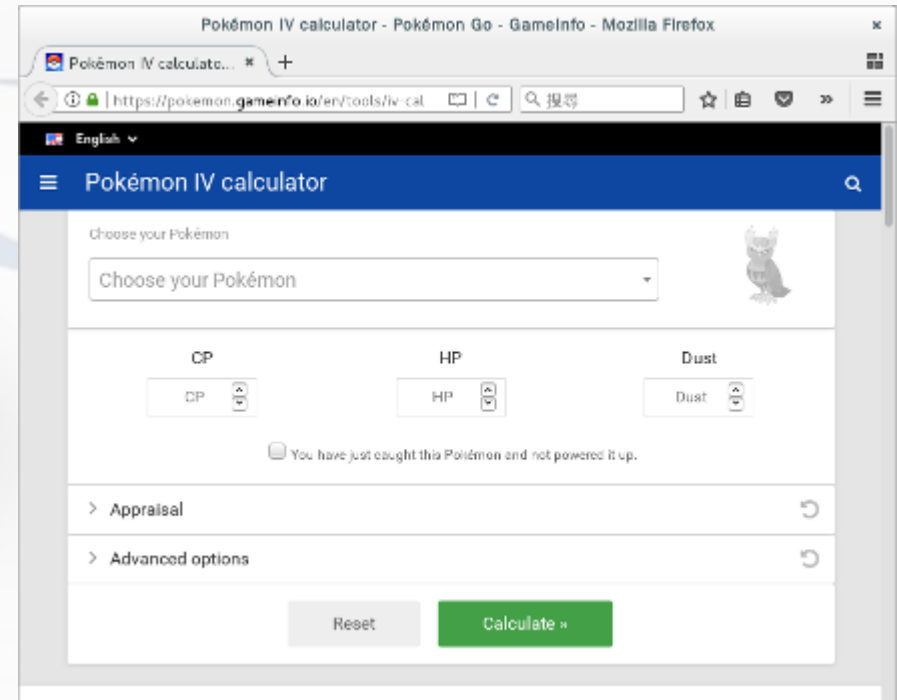

But, we are hackers.

We can still infer the IV  
from the given hints and clues.

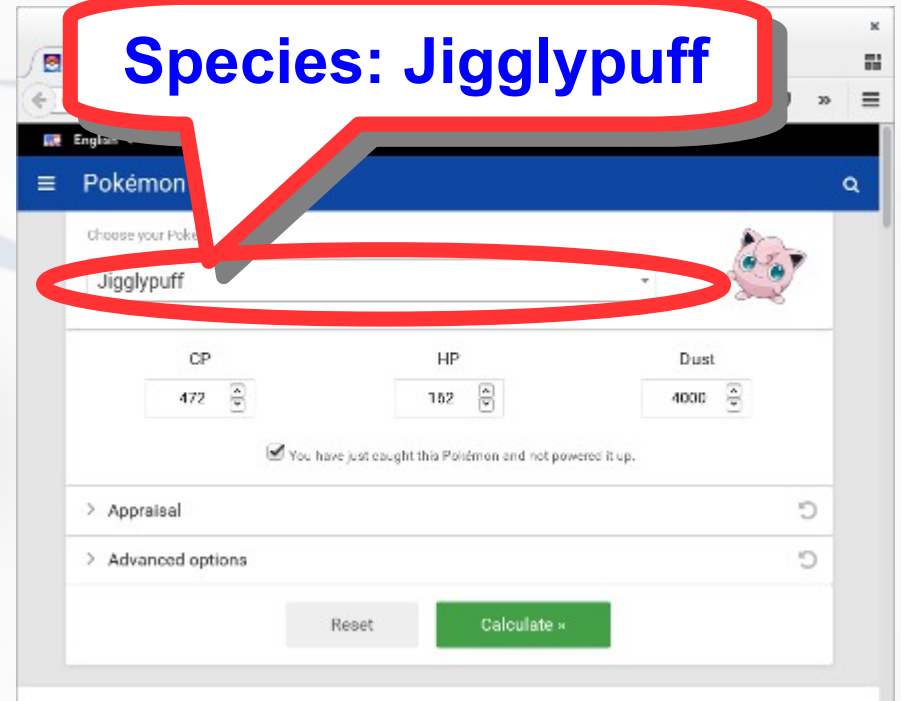

# Pokémon GO IV

- There are several websites that calculates Pokémon IV for you.

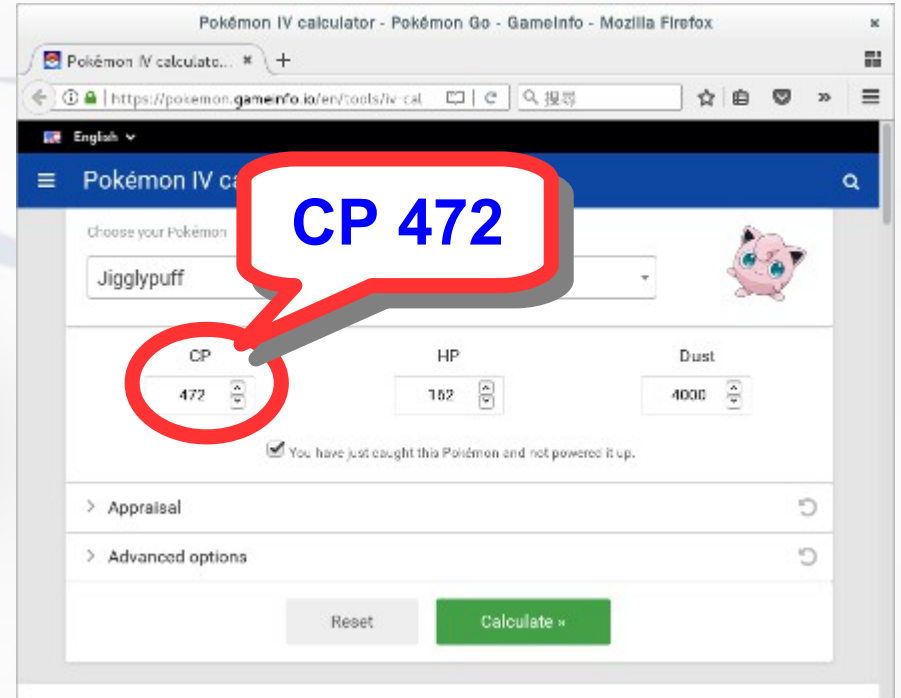

# Pokémon GO IV

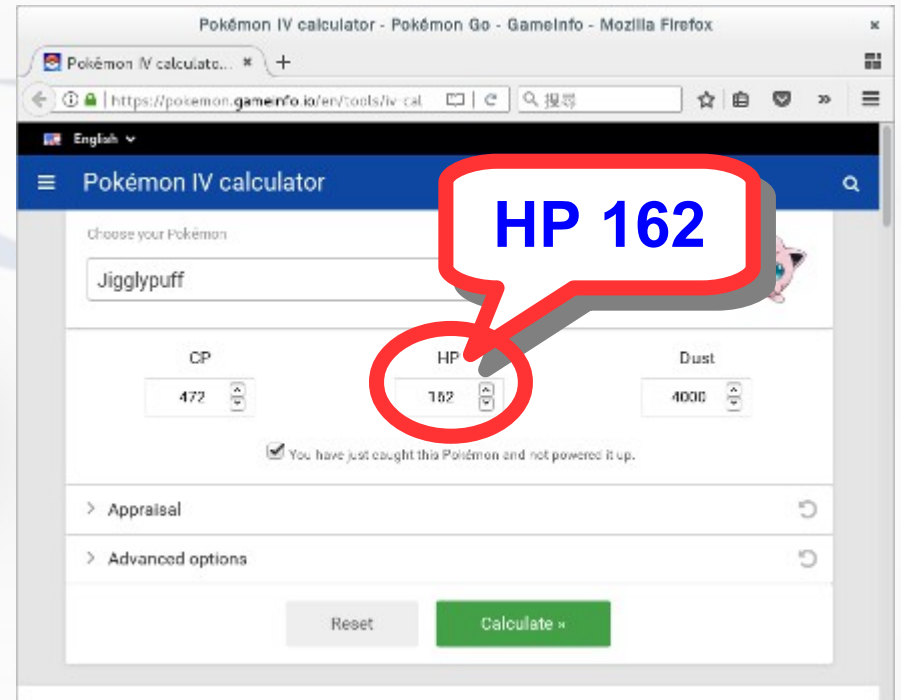

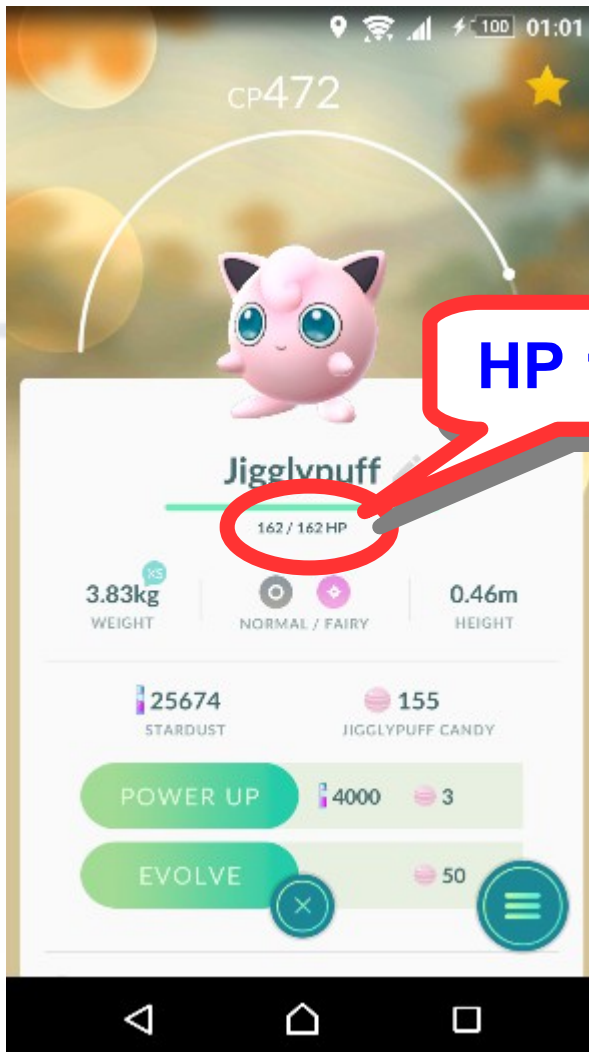

# Pokémon GO IV

CP 472

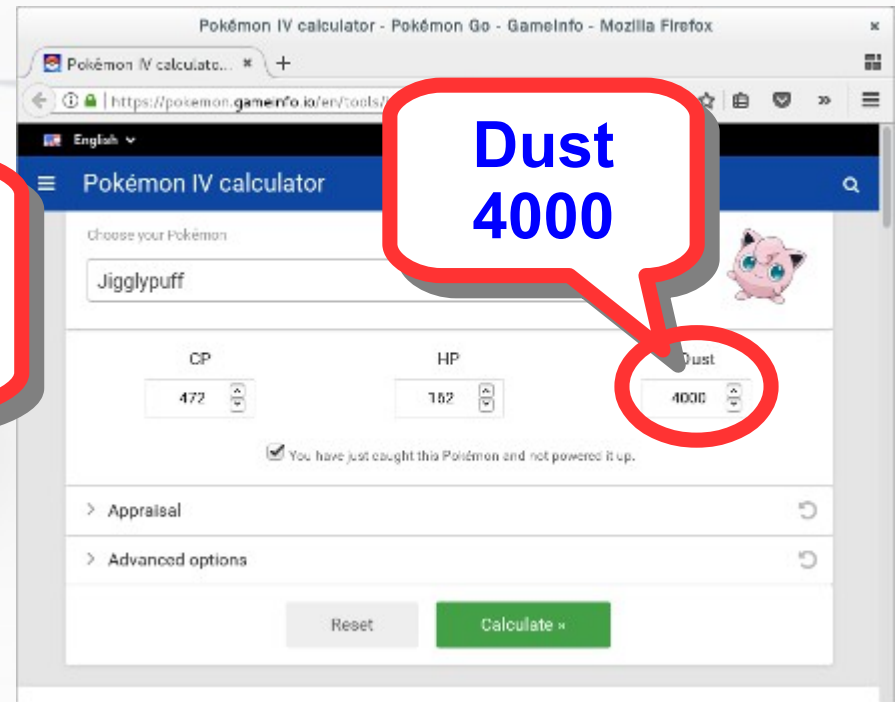

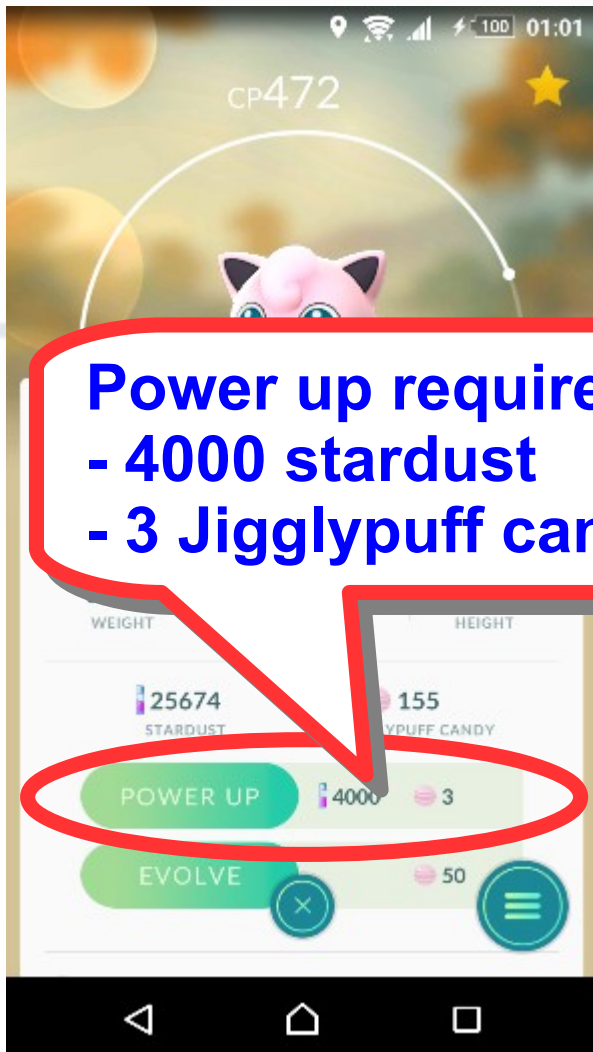

# Pokémon GO IV

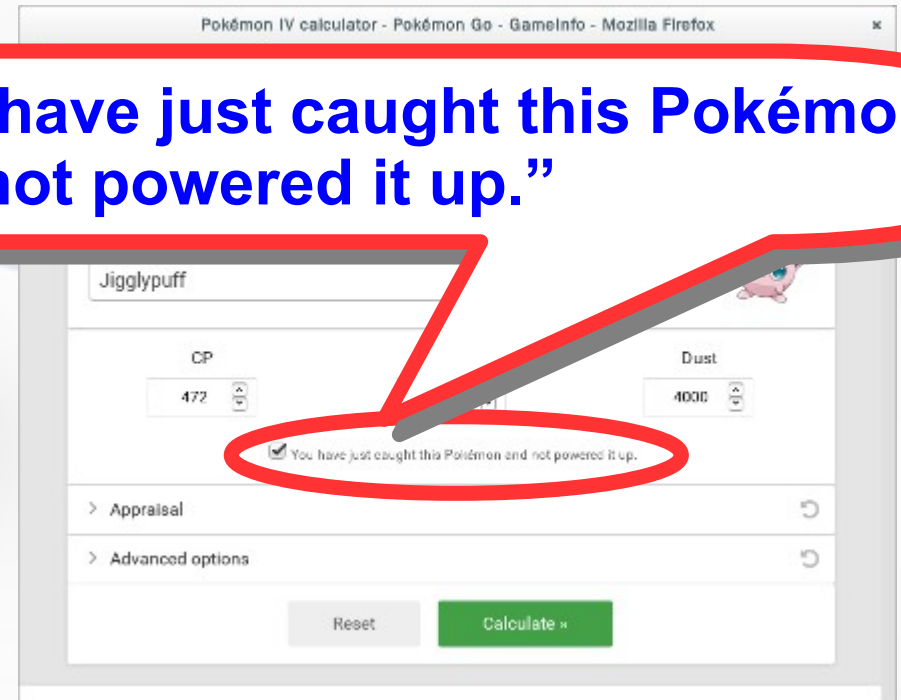

# Pokémon GO IV

# Pokémon GO IV

**“You have just caught this Pokémon and not powered it up.”**

# Pokémon GO IV

- Found 8 possible IV combinations.

62-82% Jigglypuff - Pokemon Go IV calculator - Mozilla Firefox

62-82% Jigglypuff - ... \* +

# Refine by Appraisal

- Found!
  - Level 25
  - Attack 14
  - Defense 8
  - Stamina 14

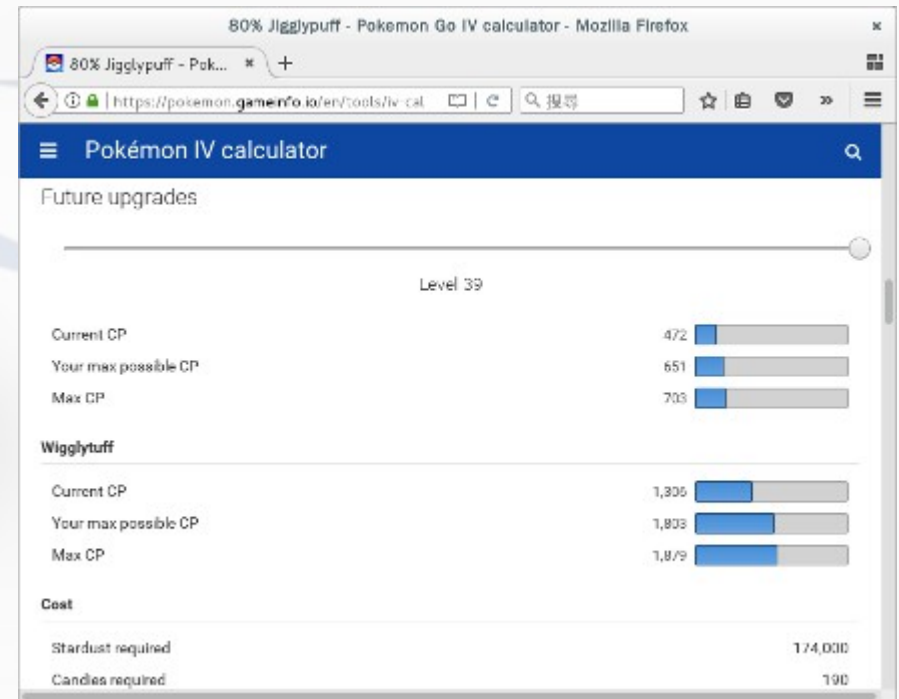

The screenshot shows a web browser window titled "80% Jigglypuff - Pokemon Go IV calculator - Mozilla Firefox". The address bar shows the URL "https://pokemon.gameinfo.io/en/tools/iv-cal". The page content includes a search bar, a "Pokémon IV calculator" header, and a section for "Perfection" which displays "1 possible IV combinations - perfection range of: 80%". Below this, a table lists the IV combinations:

Level	Attack	Defense	Stamina	Percentage perfect
25	14	8	14	80%

At the bottom, there is a section for "Future upgrades" with a slider control.

# Refine by Appraisal

- Future power-up estimation, for Pokémon level 39
  - Max CP: 1803
  - Require 174,000 stardust
  - Require 190 Jigglypuff candies

# Pokémon GO Data Sheet

	A	B	C	D	E	F	G	H	I
1	Pokémon	CP	Lv	Atk	Def	Sta	IV	Max CP	
2	Bulbasaur	428	16	9	15	15	87%	2193	
3	Ivysaur	883	20	15	15	14	98%	2250	
4	Venusaur	2138	20	13	15	14	93%	2229	
5	Charmeleon	1199	29	14	15	10	87%	2315	
6	Charizard	1535	20	14	13	10	82%	2303	
7	Squirtle	445	20	14	13	11	84%	1070	

- Using the IV calculator, I created a spreadsheet to record my strongest Pokémon.

# A More Advanced Spreadsheet

Now I have a question ...

# A More Advanced Spreadsheet

- My Lapras has the following IV:
  - Level: 20, Attack: 13, Defense: 12, Stamina: 11
- For Pokémon level 39, to max power up:
  - 205,000 stardust, 218 Lapras candies, CP 2866

# A More Advanced Spreadsheet

- My Lapras has the following IV:
  - Level: 20, Attack: 13, Defense: 12, Stamina: 11
- For Pokémon level 39, to max power up:
  - 205,000 stardust, 218 Lapras candies, CP 2866
- But I only have the following resources:
  - 237,436 stardust, **29** Larpas candies.

# A More Advanced Spreadsheet

- My Lapras has the following IV:
  - Level: 20, Attack: 13, Defense: 12, Stamina: 11
- For Pokémon level 39, to max power up:
  - 205,000 stardust, 218 Lapras candies, CP 2866
- But I only have the following resources:
  - 237,436 stardust, **29** Larpas candies.
- What's its max CP under this limitation?  
Should I power it up?

To answer this question,  
I need to be able to calculate CP myself.

For a popular game like Pokémon GO,  
someone must have hacked the formula.

And this is true.  
With a little Google,  
the CP formula is found.

# The CP (Combat Power) Formula

$$Attack_{Level} = Attack \cdot CPM_{Level} = (Attack_{Base} + Attack_{IV}) \cdot CPM_{Level}$$

$$Defense_{Level} = Defense \cdot CPM_{Level} = (Defense_{Base} + Defense_{IV}) \cdot CPM_{Level}$$

$$Stamina_{Level} = Stamina \cdot CPM_{Level} = (Stamina_{Base} + Stamina_{IV}) \cdot CPM_{Level}$$

$$CP = \frac{Attack_{Level} \cdot \sqrt{Defense_{Level}} \cdot \sqrt{Stamina_{Level}}}{10}$$

$$= \frac{(Attack \cdot CPM_{Level}) \cdot \sqrt{Defense \cdot CPM_{Level}} \cdot \sqrt{Stamina \cdot CPM_{Level}}}{10}$$

$$= \frac{Attack \cdot \sqrt{Defense} \cdot \sqrt{Stamina} \cdot CPM_{Level}^2}{10}$$

$$= \frac{(Attack_{Base} + Attack_{IV}) \cdot \sqrt{Defense_{Base} + Defense_{IV}} \cdot \sqrt{Stamina_{Base} + Stamina_{IV}} \cdot CPM_{Level}^2}{10}$$

# The CP (Combat Power) Formula

- Base stats
  - The basic attributes for each species
  - This can be found on the internet.

	A	B	C	D
1	Pokémon	Atk	Def	Sta
2	Bulbasaur	118	118	90
3	Ivysaur	151	151	120
4	Venusaur	198	198	160
5	Charmander	116	96	78
6	Charmeleon	158	129	116
7	Charizard	223	176	156
8	Squirtle	94	122	88
9	Wartortle	126	155	118
10	Blastoise	171	210	158
11	Caterpie	55	62	90
12	Metapod	45	94	100
13	Butterfree	167	151	120
14	Weedle	63	55	80

# The CP (Combat Power) Formula

- CPM (CP multiplier)
  - A list of constants increase with level.
  - This can be found on the internet, too.
  - CPM of 0.5 levels are calculated at real time:

$$CP_{lv} = \sqrt{\frac{CP_{lv-0.5}^2 + CP_{lv+0.5}^2}{2}}$$

	A	B	C
1	Level	CP Multiplier	
2	1	0.094	
3	2	0.16639787	
4	3	0.21573247	
5	4	0.25572005	
6	5	0.29024988	
7	6	0.3210876	
8	7	0.34921268	
9	8	0.37523559	
10	9	0.39956728	
11	10	0.42250001	
12	11	0.44310755	
13	12	0.46279839	
14	13	0.48168495	
15	14	0.49985844	

# The CP (Combat Power) Formula

- For example, my Butterfree is:
  - Base: Attack 167, Defense 151, Stamina 120
  - IV: Attack 14, Defense 15, Stamina 9
  - Level 22, CPM 0.62656713

$$\begin{aligned}
 CP &= \frac{(Attack_{Base} + Attack_{IV}) \cdot \sqrt{Defense_{Base} + Defense_{IV}} \cdot \sqrt{Stamina_{Base} + Stamina_{IV}} \cdot CPM_{Level}^2}{10} \\
 &= \frac{(167 + 14) \cdot \sqrt{151 + 15} \cdot \sqrt{120 + 9} \cdot 0.62656713^2}{10} \approx 1039.83
 \end{aligned}$$

For my Lapras problem,

# My Larpas Problem

- The amount of stardust and candies to power up can be found on the internet, too.

	A	B	C	D	E
1	From	To	Dust	•	
2	1	1.5	200	1	
3	1.5	2	200	1	
4	2	2.5	200	1	
5	2.5	3	200	1	
6	3	3.5	400	1	
7	3.5	4	400	1	
8	4	4.5	400	1	
9	4.5	5	400	1	
10	5	5.5	600	1	
11	5.5	6	600	1	
12	6	6.5	600	1	
13	6.5	7	600	1	
14	7	7.5	800	1	
15	7.5	8	800	1	

# My Larpas Problem

- With a total 29 candies, I can power up my Lapras from level 20 to level 25.

	B	C	D	E	F
1	To	Dust	.		
37	19	2200	2	Lapras	
38	19.5	2500	2	Dust	.
39	20	2500	2	0	0
40	20.5	2500	2	2500	2
41	21	2500	2	5000	4
42	21.5	3000	3	8000	7
43	22	3000	3	11000	10
44	22.5	3000	3	14000	13
45	23	3000	3	17000	16
46	23.5	3500	3	20500	19
47	24	3500	3	24000	22
48	24.5	3500	3	27500	25
49	25	3500	3	31000	28
50	25.5	4000	3		
51	26	4000	3		

# My Larpas Problem

- At level 25, my Lapras is:
  - Base: Attack 186, Defense 190, Stamina 260
  - IV: Attack 13, Defense 12, Stamina 11
  - Level 25, CPM 0.667934

$$\begin{aligned}
 CP &= \frac{(Attack_{Base} + Attack_{IV}) \cdot \sqrt{Defense_{Base} + Defense_{IV}} \cdot \sqrt{Stamina_{Base} + Stamina_{IV}} \cdot CPM_{Level}^2}{10} \\
 &= \frac{(186 + 13) \cdot \sqrt{190 + 12} \cdot \sqrt{260 + 11} \cdot 0.667934^2}{10} \approx 2077.21
 \end{aligned}$$

# A More Advanced Spreadsheet

	A	B	C	D	E	F	G	H	I	J	K	L	M
1	Lv	30											
2	Pokémon	CP	Lv	Atk	Def	Sta	IV	Ev.X	Dust	•	Ev.1	Ev.2	Ev.3
3	Bulbasaur	428	16	9	15	15	87%	2193	108600	96	428	683	1141
4	Ivysaur	883	20	15	15	14	98%	2250	91000	80	558	883	1463
5	Venusaur	2138	20	13	15	14	93%	2229	91000	80	549	872	1449
6	Charmeleon	1199	29	14	15	10	87%	2315	26000	22	664	1199	2184
7	Charizard	1535	20	14	13	10	82%	2303	91000	80	454	821	1498
8	Squirtle	445	20	14	13	11	84%	1970	91000	80	445	735	1281

- With the ability to calculate CP, I produced a more advanced spreadsheet to tell the potentials of my Pokémon.

# From a Spreadsheet to an Application

Knowing the CP formula,  
My own CP calculator  
is just one step away.

It is simply *brute force*.

# The Pokémon GO IV Calculator

---

```
' Psuedo code
Found = Array()
For Level = 1 To 40 Step 0.5
  For StaIV = 0 To 15
    For AtkIV = 0 To 15
      For DefIV = 0 To 15
        If CalcCP(Level, AtkIV, DefIV, StaIV) = CP Then
          AddFound(Found, Level, AtkIV, DefIV, StaIV)
        End If
      Next IVDef
    Next IVAtk
  Next IVSta
Next Level
```

This runs  
 $79 \times 15 \times 15 \times 15 = 266,625$  times.

This runs  
 $79 \times 15 \times 15 \times 15 = 266,625$  times.

**A HUGE number!!**

# Refining the Brute Force

# Refining the Brute Force

- Knowing the amount of stardust to power up limits the number of possible levels from 79 to 4.

	A	B	C	D	
32	16	16.5	1900	2

# Refining the Brute Force

---

- $HP$  is the value of  $Stamina_{Level}$  (as a whole number).

$$HP = Stamina_{Level} = (Stamina_{Base} + Stamina_{IV}) \cdot CPM_{Level}$$

- This limits  $Stamina_{IV}$  to one or two values.

The number of runs is reduced to  
 $2 \times 2 \times 15 \times 15 = 900$  times.

The number of runs is reduced to  
 $2 \times 2 \times 15 \times 15 = 900$  times.

A lot smaller.

# Further Refinement with Team Leader Appraisal

# Team Leader Appraisal #1

## The Total

- “Overall, your [Pokémon] simply amazes me. It can accomplish anything!”
  - $Atk_{IV} + Def_{IV} + Sta_{IV} \geq 37$
- “Overall, your [Pokémon] is a strong Pokémon. You should be proud!”
  - $30 \leq Atk_{IV} + Def_{IV} + Sta_{IV} \leq 36$
- “Overall, your [Pokémon] is a decent Pokémon.”
  - $23 \leq Atk_{IV} + Def_{IV} + Sta_{IV} \leq 29$
- “Overall, your [Pokémon] may not be great in battle, but I still like it!”
  - $Atk_{IV} + Def_{IV} + Sta_{IV} \leq 22$

# Team Leader Appraisal #2

## The Best Stats

- “Its HP/Attack/Defense is its strongest feature.”
- (Optional) “I'm just as impressed with its HP/Attack/Defense.”
  - The listed HP/Attack/Defense are equally its best stats.

# Team Leader Appraisal #3

## The Maximmm Stat Value

- “I'm blown away by its stats. WOW!”
  - $\text{Max}(Atk_{IV}, Def_{IV}, Sta_{IV}) = 15$
- “It's got excellent stats! How exciting!”
  - $\text{Max}(Atk_{IV}, Def_{IV}, Sta_{IV}) = 13$  or  $14$
- “Its stats indicate that in battle, it'll get the job done.”
  - $8 \leq \text{Max}(Atk_{IV}, Def_{IV}, Sta_{IV}) \leq 12$
- “Its stats don't point to greatness in battle.”
  - $\text{Max}(Atk_{IV}, Def_{IV}, Sta_{IV}) \leq 7$

# The Pokémon GO IV Calculator

Pokémon GO IV Calculator

Pokémon: Dragonite 

CP: 1823 HP: 109 Star dust: 2200 Player level: 24

This Pokémon has not been powered-up yet.

Team Leader Appraisal

 Team:  Valor  Mystic  Instinct

 Candela, leader of Team Valor, says:

Overall, your Dragonite simply amazes me. It can accomplish anyth

Its  Attack  is its strongest feature.

I'm just as impressed with its Defense.

I'm just as impressed with its HP.

I'm blown away by its stats. WOW!

OK Cancel

But things are not always so easy.

# Case #1

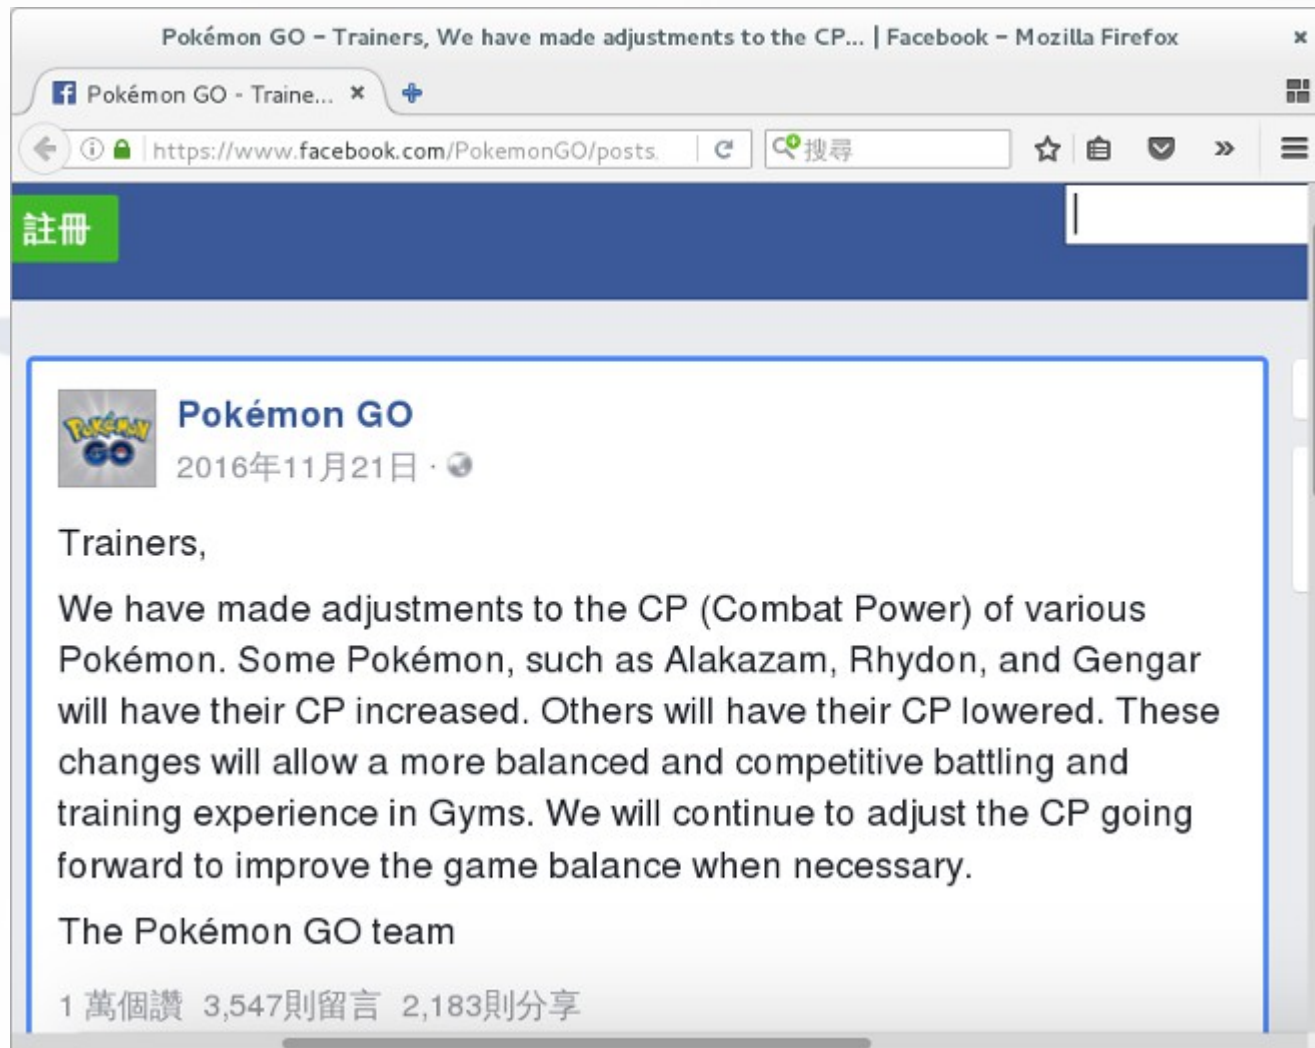

One morning in November when I woke up,  
I found my second and third strongest  
Pokémon, my Gyarados sisters,  
become much stronger than I remembered!

In fact, not only my Gyarados sisters,  
but all of them have different CP!

I went to the Pokémon GO fan page,  
and found the following announcement...

# Update: Pokémon CP Adjustment

Pokémon GO - Trainers, We have made adjustments to the CP... | Facebook - Mozilla Firefox

註冊

 **Pokémon GO**  
2016年11月21日 · 🌐

Trainers,

We have made adjustments to the CP (Combat Power) of various Pokémon. Some Pokémon, such as Alakazam, Rhydon, and Gengar will have their CP increased. Others will have their CP lowered. These changes will allow a more balanced and competitive battling and training experience in Gyms. We will continue to adjust the CP going forward to improve the game balance when necessary.

So the base stats was updated?  
That is a *terrible* news!

Fortunately,  
my IV calculator was not published yet.

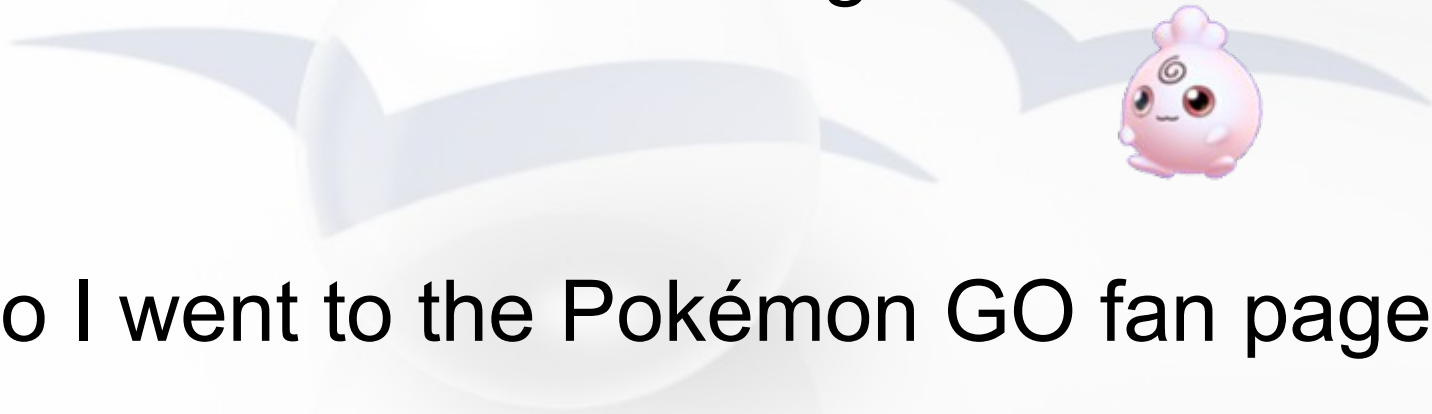

I Googled,  
and found someone has already published  
a new base stats table.

I immediately applied it to my IV calculator.

# Case #2

The other day when I was walking,  
I hatched something I had never seen!

So I went to the Pokémon GO fan page again.

# Update: New Pokémon Added!

Pokémon GO – Trainers, Professor Willow has discovered... | Facebook – Mozilla Firefox

Pokémon GO - Traine... x

註冊

 **Pokémon GO**  
2016年12月12日 · 🌐

Trainers,

Professor Willow has discovered Togepi and Pichu hatching from Eggs! Starting later today, Trainers will have the opportunity to hatch these and several other Pokémon that were originally discovered in the Johto Region in Pokémon Gold and Pokémon Silver video games. These are the first of more Pokémon coming to Pokémon GO over the next few months. Be sure to use the hashtag [#PokemonGO](#) on Twitter to share your experiences as you explore your local neighborhoods with family and friends, walk to hatch these Pokémon from Eggs, and register them to your collection this holiday season. We can't wait to

**Ouch!**  
**I don't have the data of these babies yet!**

It's not hard to Google  
for the base stats of these new babies.

But I do not have their images!

I spent all my game coins  
to hatch these baby Pokémon.

And, in the end,  
I beg my every friend  
for screenshots of baby Pokémon  
that I missed.

# Lessons I Learned

## Lesson #1

If you are creating some game hacking tool without commercial support, you had better *not* publish it.

When the game updates,  
you'll have to update immediately.

It's a nightmare.

## Lesson #2

For strong species like Dragonite, base stats take the largest part of the CP.

Dragonite is just stronger!

$$\text{Attack: } 263 + \text{IV } 15 = 278$$

$$\text{Defense: } 201 + \text{IV } 15 = 216$$

$$\text{Stamina: } 182 + \text{IV } 11 = 193$$

The second factor  
is the Pokémon level (the CPM).

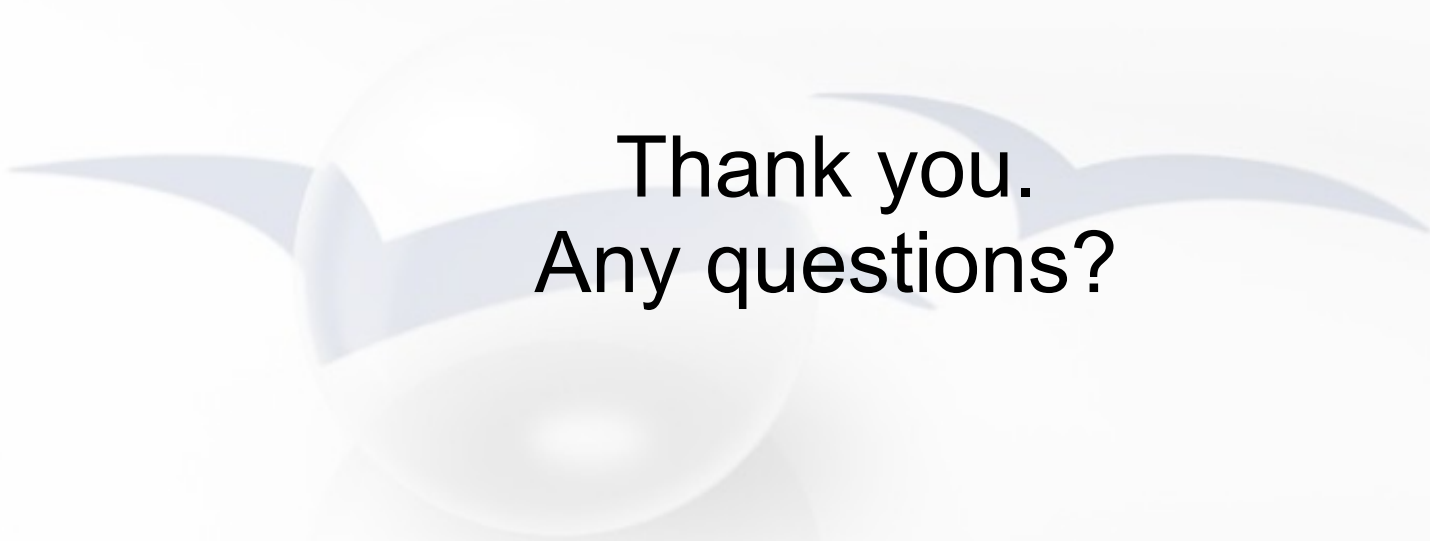

And your individual values (IV)?

Well, it doesn't really matter. :p

Thank you.  
Any questions?
