

Yet Another repoman

Anton Marchukov

@martchukov

- **Software Engineer at Red Hat.**
- Member of **oVirt Community Infra** teams.
- **CI** and related **infrastructure** for the projects.

[oVirt](#) is a free, open-source virtualization management platform based on the KVM hypervisor.

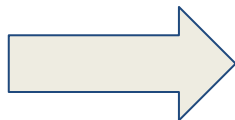

**Efficiently aggregate
1000s RPMs/day into
usable repositories.**

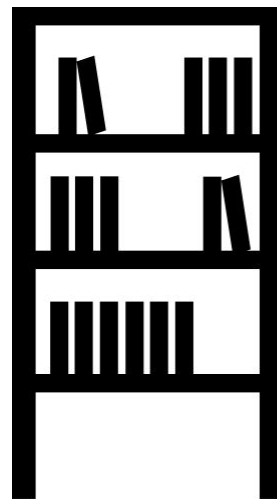

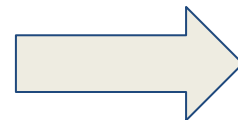

```
[amarchuk@resources02 ~]$ repoman --help
usage: repoman [-h] [-v] [-n] [-c CONFIG] [-o OPTION] [-t TEMP_DIR]
              [-s STORES] [-k KEY] [--passphrase PASSPHRASE] [--with-sources]
              [--create-latest-repo]
              dir
              {add,generate-src,createrepo,remove-old,sign-rpms,sign-artifacts,docs}
              ...
```

Artifact repositories manager. The "dir" argument is always required, so in order to see the docs, you can pass a dummy "dir", for example "repoman shrubbery docs filters"
