

# Go at Tailscale

Brad Fitzpatrick  
FOSDEM, Feb 2021

Hello again!

Long time, no see!

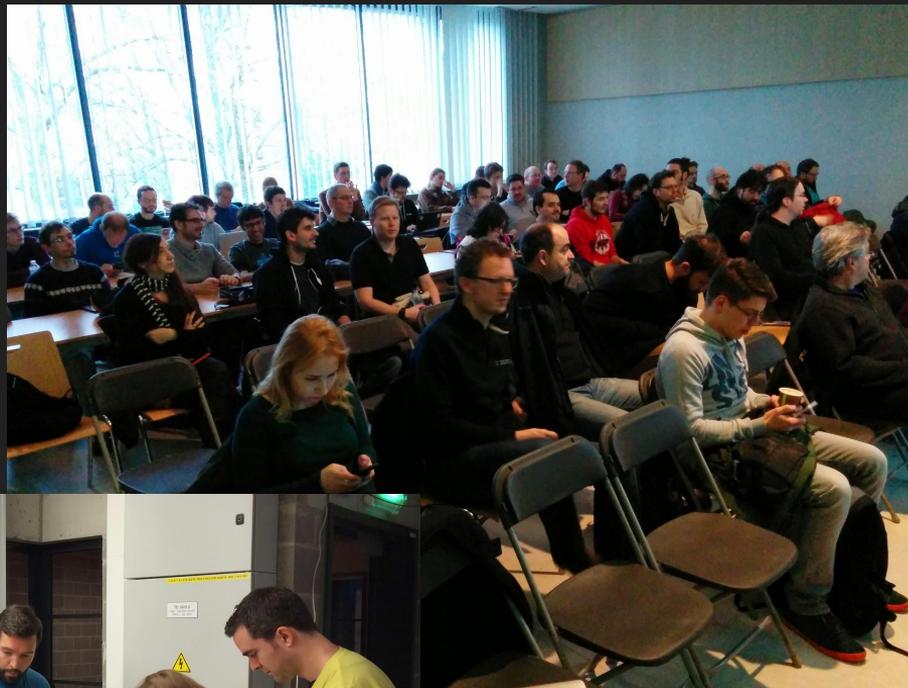

**FOSDEM** <sup>15</sup>

**Go**

K.3.401

Conference? Nope!

Ball!

Hello for the  
first time!!

LiveJournal, memcached, OpenID, ...

a wise friend, Evan

You should try Debian.

- 1999

I reimplemented git in  
Ocaml and Haskell and  
have opinions.

Rust looks like it will be interesting.

- 2006/2007-ish

No more Linux.  
I only use Windows  
now.  
Won't tell you why.

LiveJournal, memcached, OpenID, ...

Google

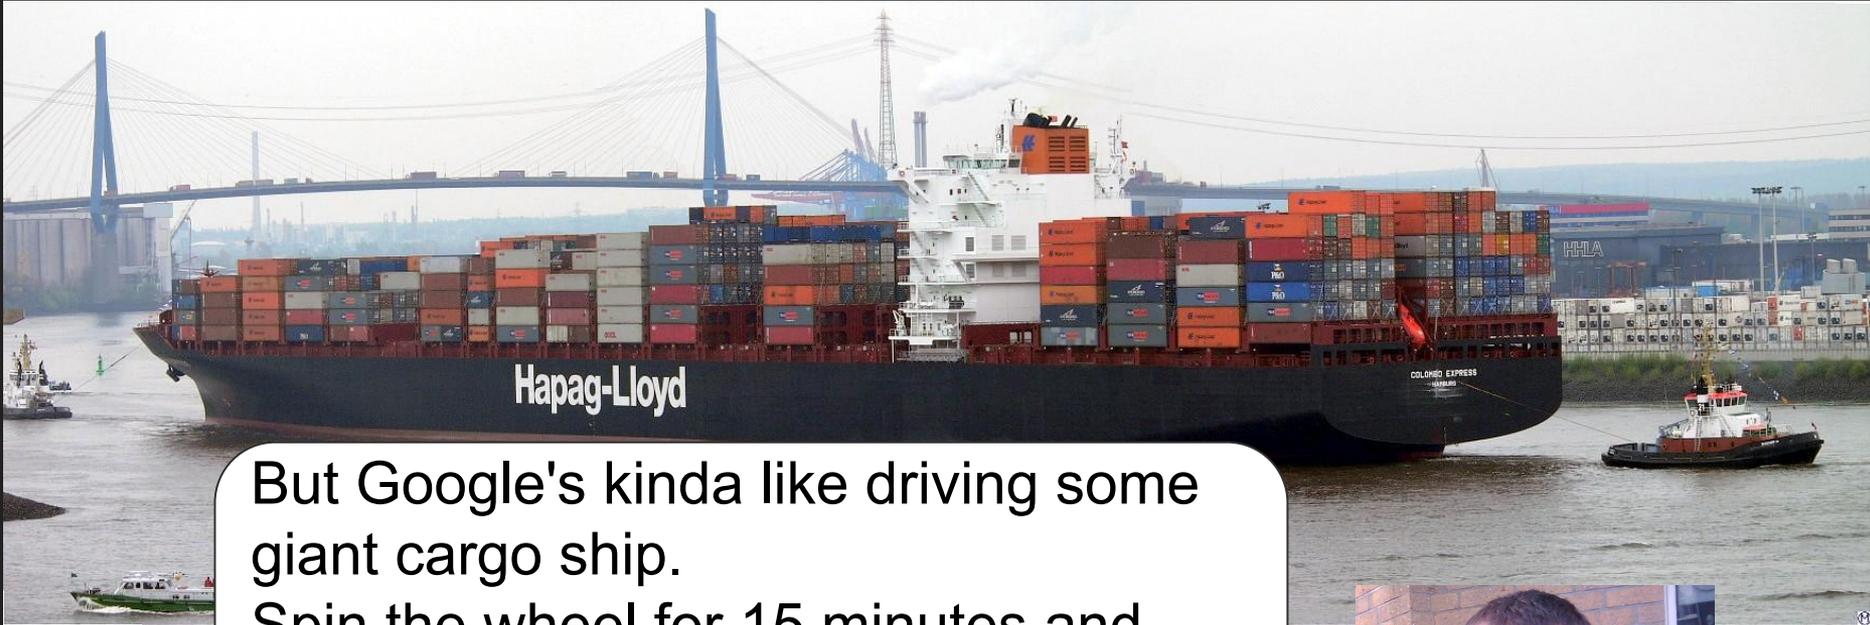

Welcome to Google!

... a start-up is kinda like driving a jet-ski.

But Google's kinda like driving some giant cargo ship. Spin the wheel for 15 minutes and nothing happens. But that momentum when it does! And those resources!

LiveJournal, memcached, OpenID, ...

Google (social, gmail BE, Android)

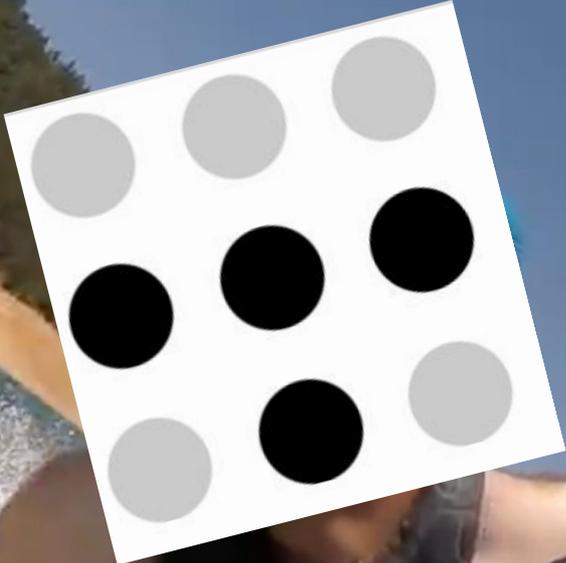

Go for 10 yrs (std, http, CI, ...)

....

But time for a change!

What is Tailscale?

# Tailscale

- "new style" VPN
  - we don't run any "exit nodes" (you can)
  - end-to-end encryption, SSO identity
- you can talk with peers in your network (your or your organization's devices)
  - or share devices with friends/coworkers
- WireGuard + SSO + key management + ACLs + NAT/firewall traversal
  - "mesh" VPN: peers communicate directly without HW or SW "concentrator"
- gives each of your devices a **magic IP addresses that Just Works** between any OS, any device, any network, without network config
- open source: non-GUI client, Android app, core
  - others beat us to releasing open source server component
- free for individuals
  - we make money from companies

Any OS?

Linux

Windows

macOS

iOS

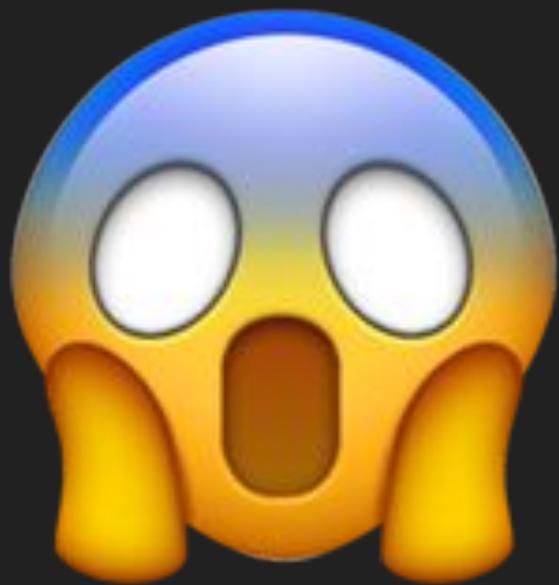

Android

FreeBSD, pfSense, OPNsense

Synology

Ubiquiti EdgeRouter

....

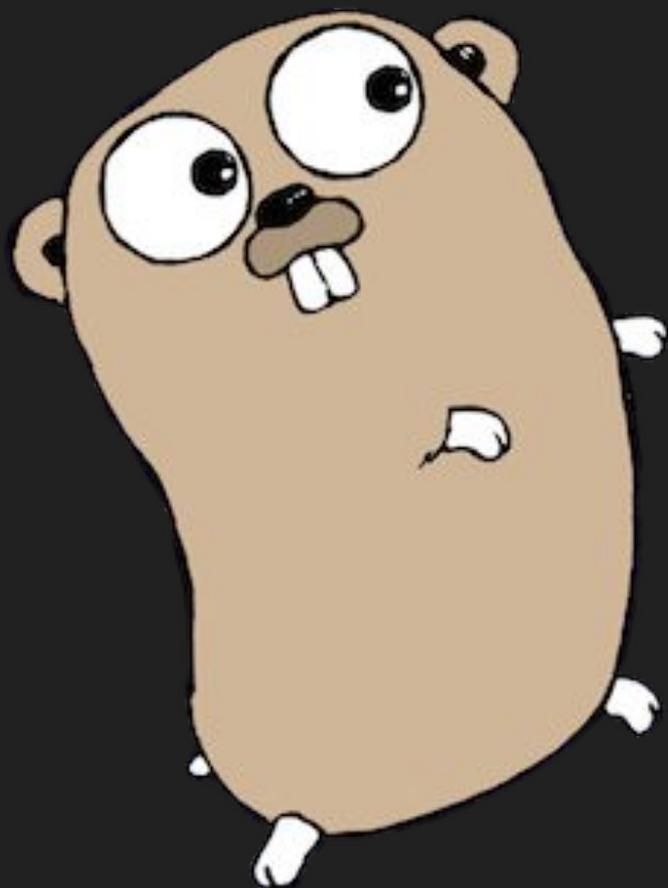

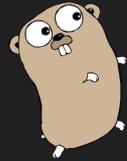

If only there was a way to write  
cross-platform native applications!

Electron!

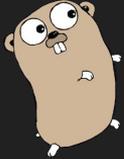

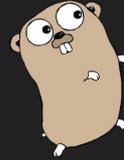

Naah

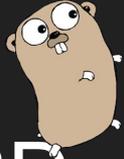

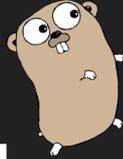

Linux

Windows

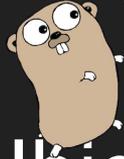

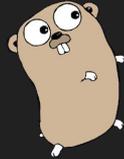

macOS

iOS

Android

FreeBSD, pfSense, OPNsense

Synology

Ubiquiti EdgeRouter

....

Linux

Linux, \*BSD, etc

CLI & daemon

go install tailscale.com/cmd/tailscale{,d}  
/dev/net/tun  
netlink, devd for changes

# TUN

inject IP packets in/out of kernel  
(Tailscale is all userspace)

plan to use faster userspace interfaces  
later

Windows

Auth expires in: 3240 hours

My address: 100.85.149.128

# Windows

use wireguard-go's Wintun  
tailscaled (OSS)

tailscale.exe CLI (OSS)

[golang.org/x/sys/windows](https://golang.org/x/sys/windows){,svc}  
system tray GUI (uses lxn/walk)

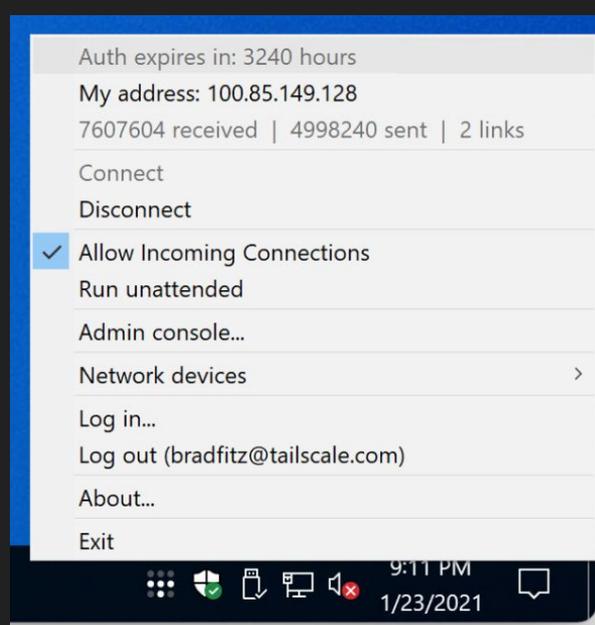

winui.go

```
import ("github.com/lxn/walk" ..)
```

```
...  
    if a.ni, err = walk.NewNotifyIcon(a.mw); err != nil {  
        return err  
    }  
}
```

```
...  
a.Start = a.addActionLocked("&Connect", false, func() {  
    a.b.UpdatePrefs(func(p *ipn.Prefs) { p.WantRunning = true })  
})  
a.Stop = a.addActionLocked("&Disconnect", false, func() {  
    a.b.UpdatePrefs(func(p *ipn.Prefs) { p.WantRunning = false })  
})  
a.addSeparatorLocked()
```

```
    a.AllowIncoming = a.addCheckedActionLocked("Allow &Incoming Connections",  
"ShieldsDown", true,  
    func(p *ipn.Prefs) bool { return !p.ShieldsUp },  
    func(p *ipn.Prefs, v bool) { p.ShieldsUp = !v })
```

macOS

macOS

go install tailscale.com/cmd/tailscale{,d}

*-or-*

GUI in App Store

The image shows a mobile application interface for Tailscale. At the top, there is a dark blue navigation bar with several icons: a power button, a grid of dots, a play button, a notification badge with ".32", a folder icon, a list icon, an American flag, a speaker icon, a Bluetooth icon, and an upward arrow. Below this bar is a white settings menu with the following items:

- About Tailscale
- My address: 100.123.101.40  
204.89 KB received | 143.80 KB sent | 1 link
- Allow incoming connections
- Connect
- Disconnect
- Admin console...
- Network devices >
- Log in...
- Log out (bradfitz@tailscale.com)
- Quit

Go from Swift

```
go build -o $X -buildmode c-archive
```

## foo.h

```
extern void goBeCLI(const char * sharedDir);
```

## foo.swift

```
func applicationDidFinishLaunching(_ aNotification: Notification) {
    if let dir = FileManager.default.containerURL(forSecurityApplicationGroupIdentifier:
FileHelper.appGroupId ?? "") {
        dir.path.withCString {
            goBeCLI($0)
        }
    }
}
```

## foo.go (the c-archive part)

```
import "C"
```

```
//export goBeCLI
```

```
func goBeCLI(sharedDirStr unsafe.Pointer) {
    ...
    if err := cli.Run(os.Args[1:]); err != nil {
        log.Fatal(err)
    }
    os.Exit(0)
}
```

func (c *Conn) SetMark(value uint32) error
func (c *Conn) SetNetInfoCallback(fn func(*tailcfg.NetInfo))
func (c *Conn) SetNetworkMap(nm *controlclient.NetworkMap)
```

net.IP

```
package net  
type IP []byte
```

mutable

transparent

*underlying type* is part of the go1 contract,  
can't fix after the fact like time.Time

*not comparable\**  
  

(can't do == or be a map key)

unnecessarily big

24 byte slice header + separate 4 or 16  
byte address array = 28-40 bytes

IPv6 address only 16 bytes

## net.IP vs net.IPAddr

a net.IP can't store an IPv6 zone  
net.IPAddr does that  
(two IP types in std!)

```
bytes.Equal(net.ParseIP("1.2.3.4"),  
            net.ParseIP("::ffff:0102:0304"))
```

inet.af/netaddr.IP

```
package netaddr
```

```
type IP struct {  
    addr      uint128  
    famOrZone *intern.Value  
}
```

```
type uint128 struct {  
    hi, lo uint64  
}
```

- + *immutable*

- + *comparable*
- + *24 bytes*
- + *IPv4 != IPv6*
- + *does v6 zones*

[go4.org/intern](https://go4.org/intern)

## type Value

```
type Value struct {  
    // contains filtered or unexported fields  
}
```

A Value pointer is the handle to an underlying comparable value. See func Get for how Value pointers may be used.

## func (\*Value) Get

```
func (v *Value) Get() interface{}
```

Get returns the comparable value passed to returned v.

## func Get ¶

### func GetByString

```
func GetByString(s string) *Value
```

```
func Get(cmpVal interface{}) *Value
```

Get returns a pointer representing the comparable value cmpVal.

The returned pointer will be the same for Get(v) and Get(v2) if and only if v == v2, and can be used as a map key.

```
var (  
    // mu guards valMap, a weakref map of *Value by underlying value.  
    // It also guards the resurrected field of all *Values.  
    mu      sync.Mutex  
    valMap  = map[key]uintptr{} // to uintptr(*Value)
```

```
// We play unsafe games that violate Go's rules (and assume a non-moving
// collector). So we quiet Go here.
// See the comment below Get for more implementation details.
//go:nocheckptr
func get(k key) *Value {
    mu.Lock()
    defer mu.Unlock()

    var v *Value
    if valSafe != nil {
        v = valSafe[k]
    } else if addr, ok := valMap[k]; ok {
        v = (*Value)((unsafe.Pointer)(addr))
        v.resurrected = true
    }
    if v != nil {
        return v
    }
    v = k.Value()
    if valSafe != nil {
        valSafe[k] = v
    } else {
        // SetFinalizer before uintptr conversion (theoretical concern;
        // see https://github.com/go4org/intern/issues/13)
        runtime.SetFinalizer(v, finalize)
        valMap[k] = uintptr(unsafe.Pointer(v))
    }
    return v
}
```

```
func finalize(v *Value) {
    mu.Lock()
    defer mu.Unlock()
    if v.resurrected {
        // We lost the race. Somebody resurrected it while we
        // were about to finalize it. Try again next round.
        v.resurrected = false
        runtime.SetFinalizer(v, finalize)
        return
    }
    delete(valMap, keyFor(v.cmpVal))
}
```

```
package netaddr
```

```
type IP struct {  
    addr          uint128  
    famOrZone *intern.Value  
}
```

```
// z0, z4, and z6noz are sentinel IP.z values.  
// See the IP type's field docs.  
var (

    z4    = new(intern.Value)  
    z6noz = new(intern.Value)  
)
```

```
// WithZone returns an IP that's the same as ip but with the provided
// zone. If zone is empty, the zone is removed. If ip is an IPv4
// address it's returned unchanged.
```

```
func (ip IP) WithZone(zone string) IP {
    if !ip.Is6() {
        return ip
    }
    if zone == "" {
        ip.z = z6noz
        return ip
    }
    ip.z = intern.GetByString(zone)
    return ip
}
```

```
// Zone returns ip's IPv6 scoped addressing zone, if any.  
func (ip IP) Zone() string {  
    if ip.z == nil {  
        return ""  
    }  
    zone, _ := ip.z.Get().(string)  
    return zone  
}
```
