

Scaling Jitsi Meet

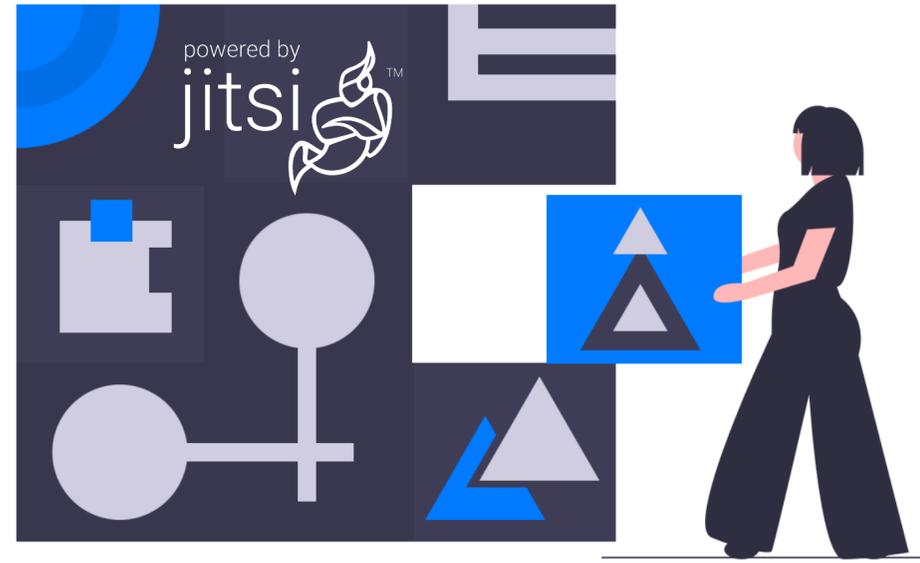

Challenges running `meet.jit.si` at scale during the pandemic

**Infrastructure overview
(pre-COVID19)**

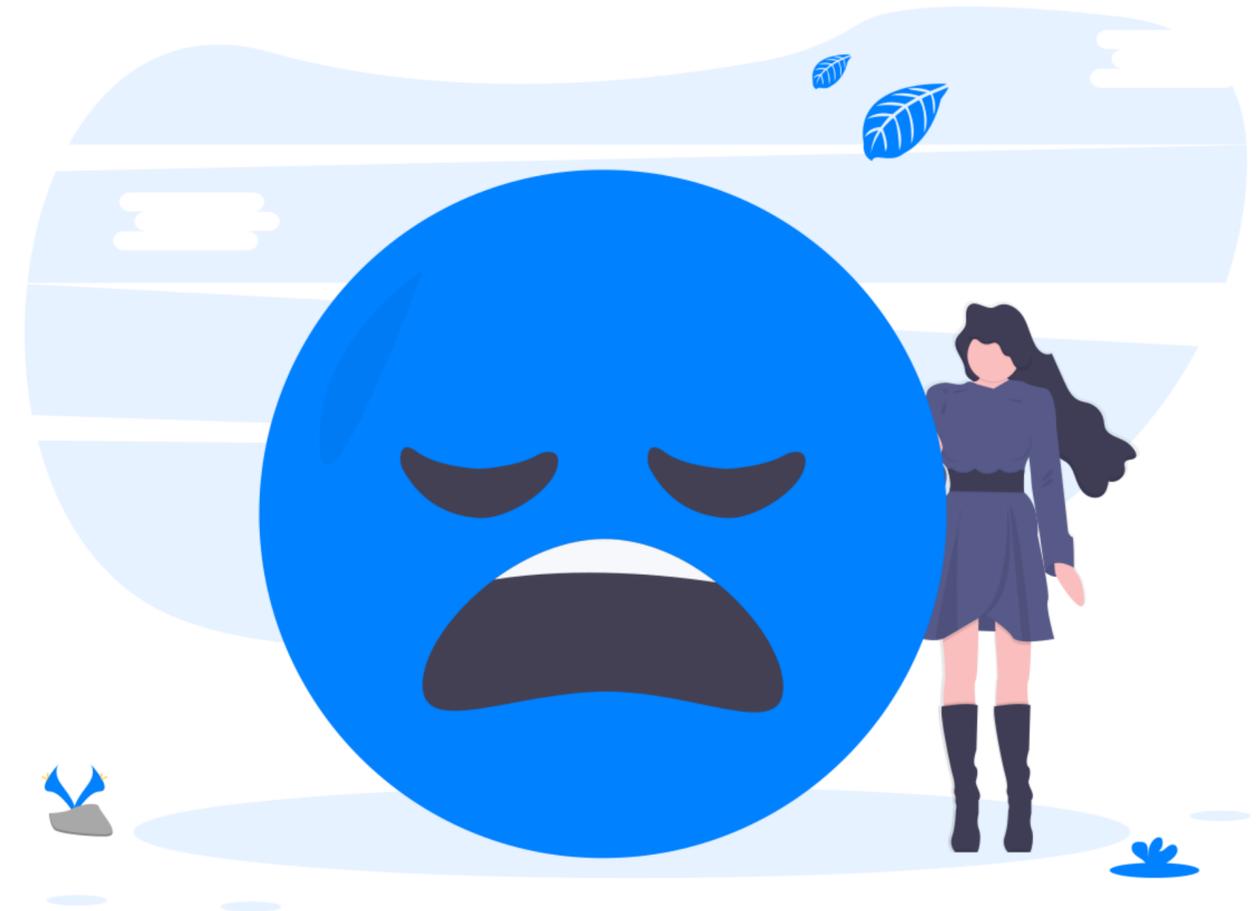

Growing pains

What broke as we scaled

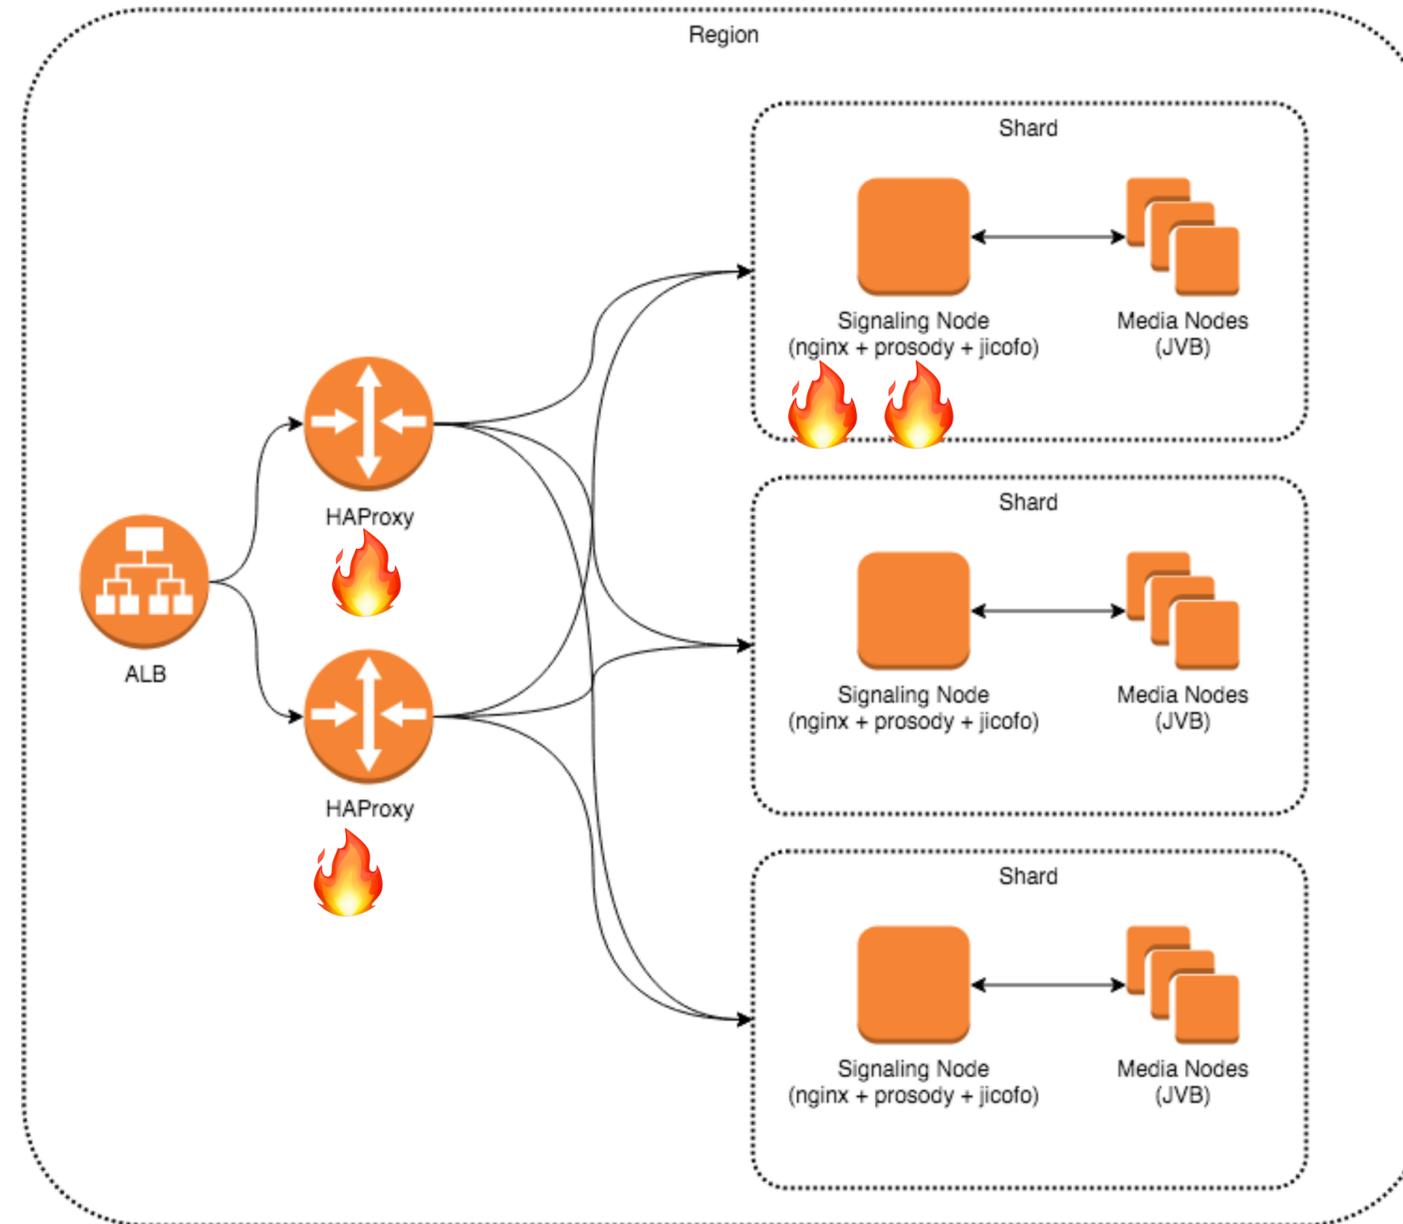

What didn't work

We tried to be ready but the load exceeded all expectations

- Too much load on the signalling nodes resulted in 504s
- Users were “alone” in the meeting
- Mobile users couldn't join (lots of 1 star reviews)
- First time users were not sure about how to use the tool
- Tons of forum posts
- 100s of emails

“Waterfall” failures

EMFILE

Incorrect file descriptor limits

- First affected Nginx, then Prosody
- Raise the limits!
- Reduce the number of connections, switch to WebSocket
- We ran `prlimit` in production, for real

Prosody overload

- CPU pegged at 100% — Timeouts, disconnections!
- Suboptimal custom modules
- Abuse
- Too much internal messaging in our clients / servers
- 0.11 perf improvements, shoutout to Matt and team!
- Make sure you're using the epoll backend

OCTO

Fine tuning bridge cascading

- OCTO: scaling a meeting beyond a single bridge
- All bridges connected to all shards didn't work, too much internal traffic
- OCTO is now enabled across all bridges of a single shard

Ephemeral port exhaustion

In the HAProxy

- Increase the number of IP address from which traffic is sent inwards
- The switch to WebSocket also helped

AWS Global Accelerator

- Central Europe was the busiest region (by far)
- With GA we could spread out the load to other close regions
- Also helps with region level outages

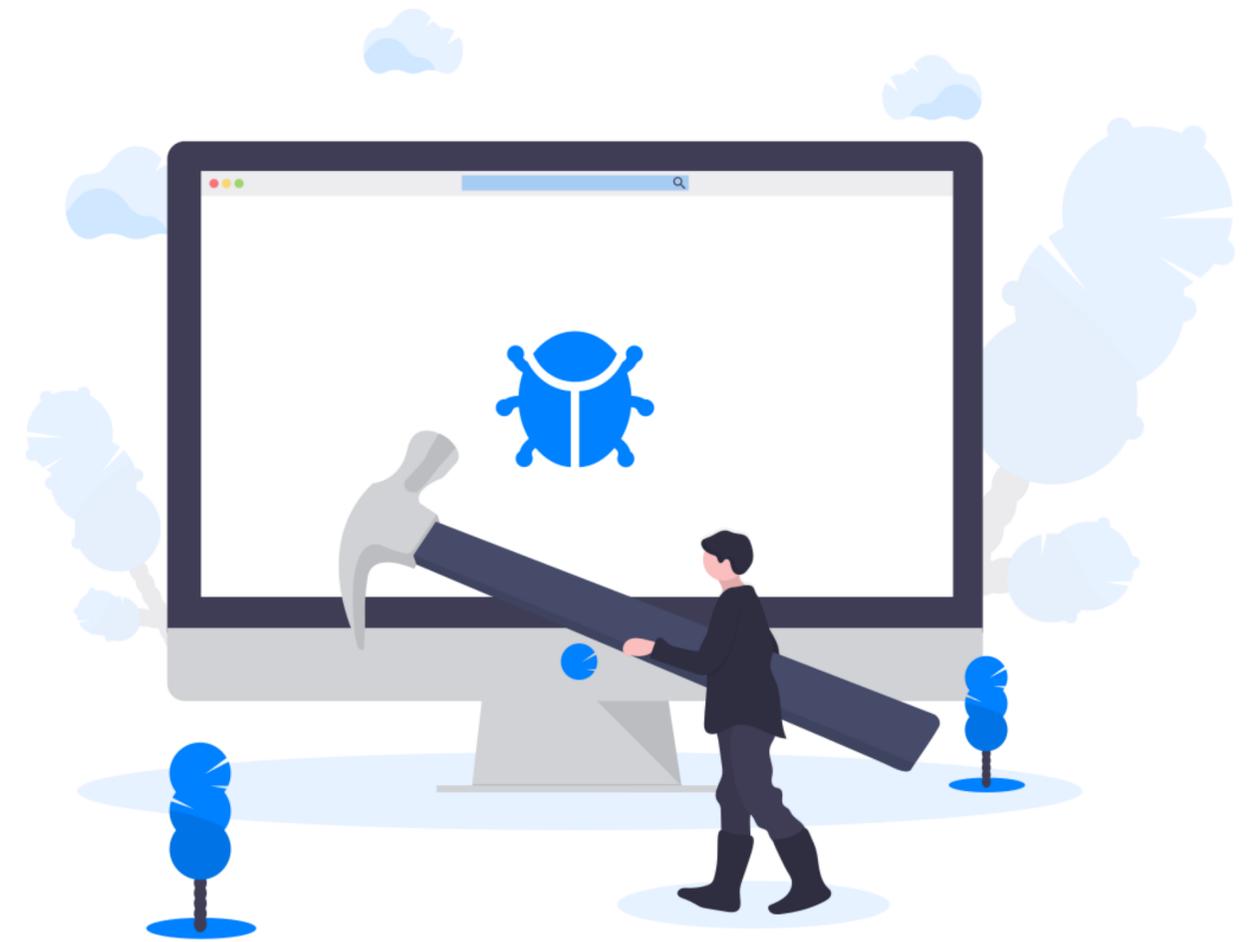

The community stepped up!

- Users helping each other in our forum
- Video guides
- Infographics
- “Word of mouth” on social media
- Myriad of instances run by many organisations and individuals

Time to fix other things

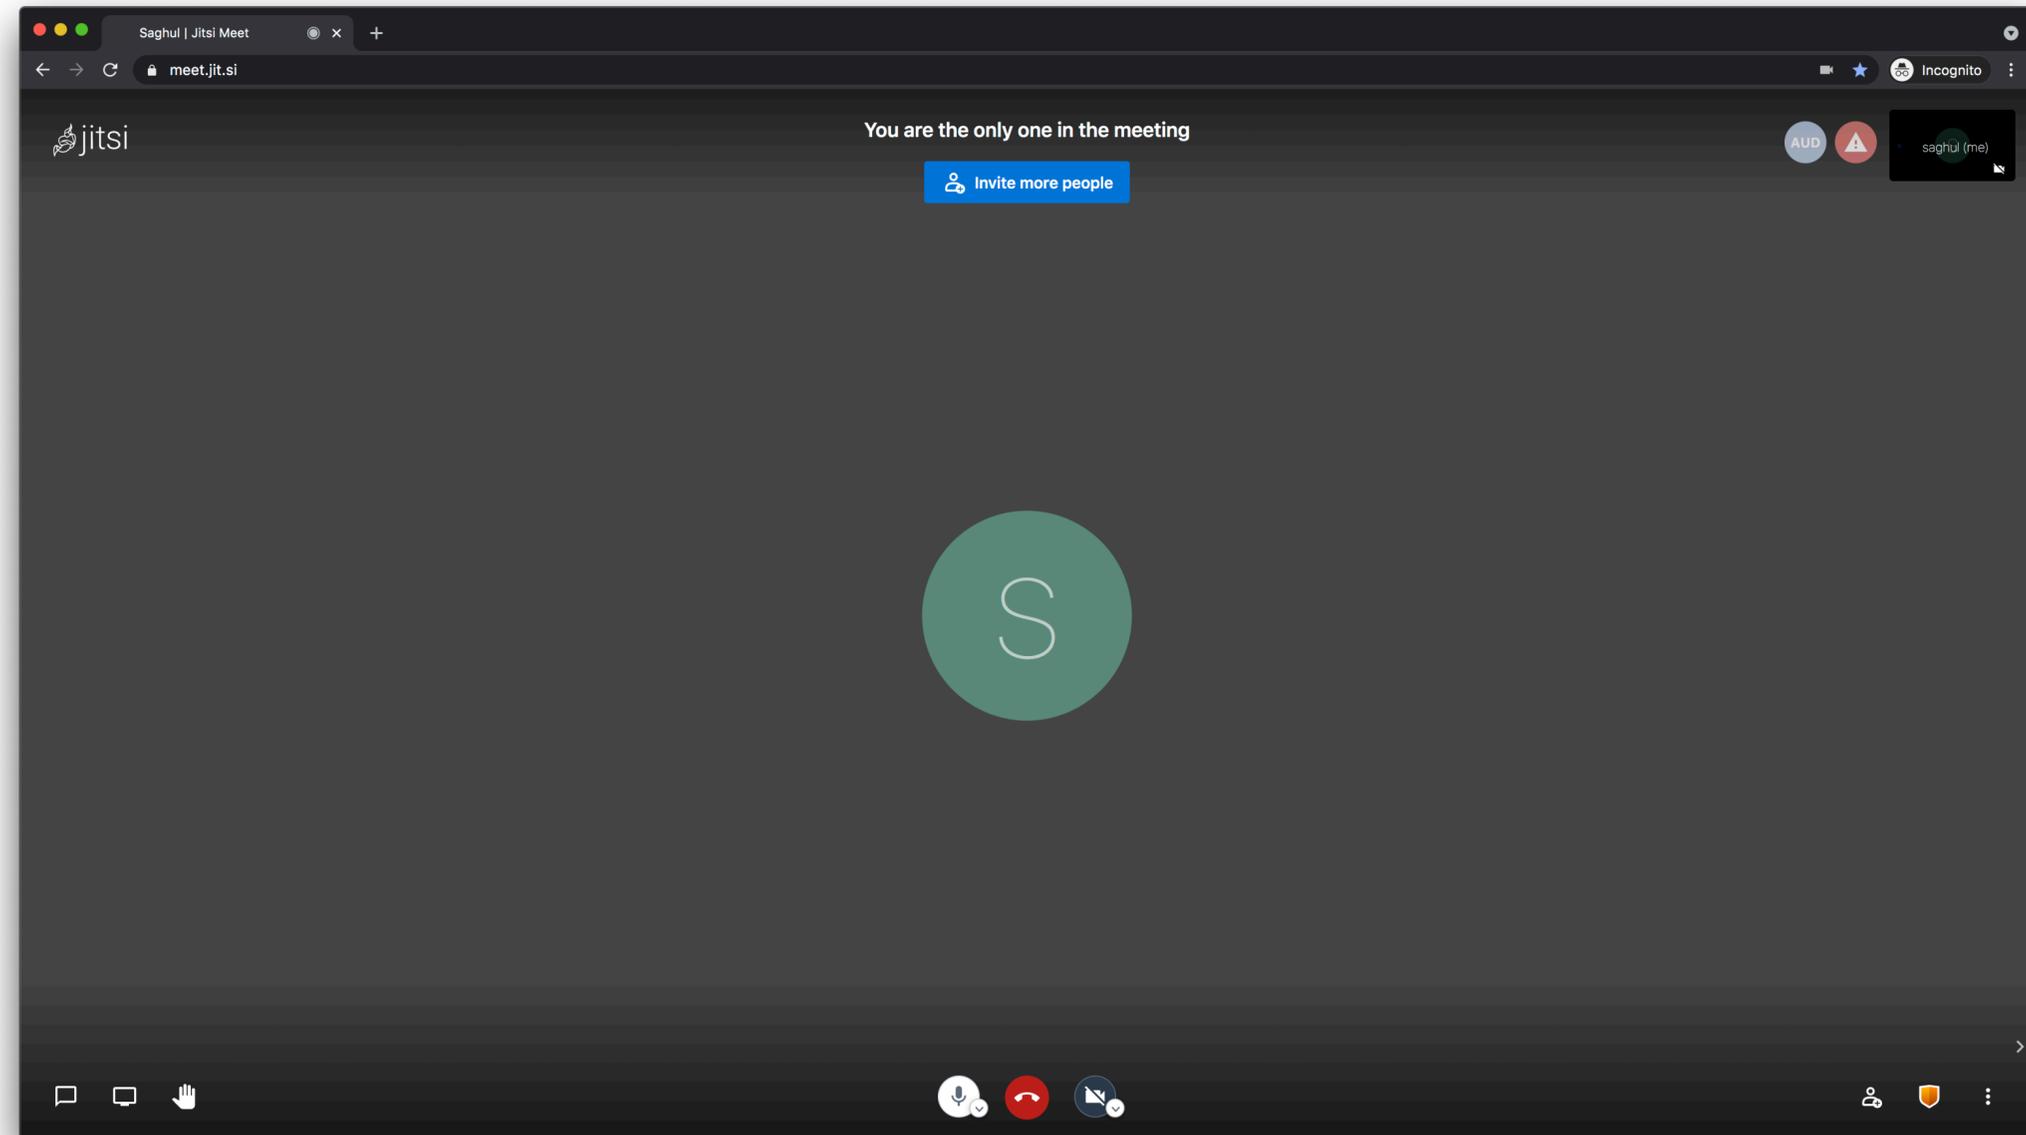

Bad UI/UX

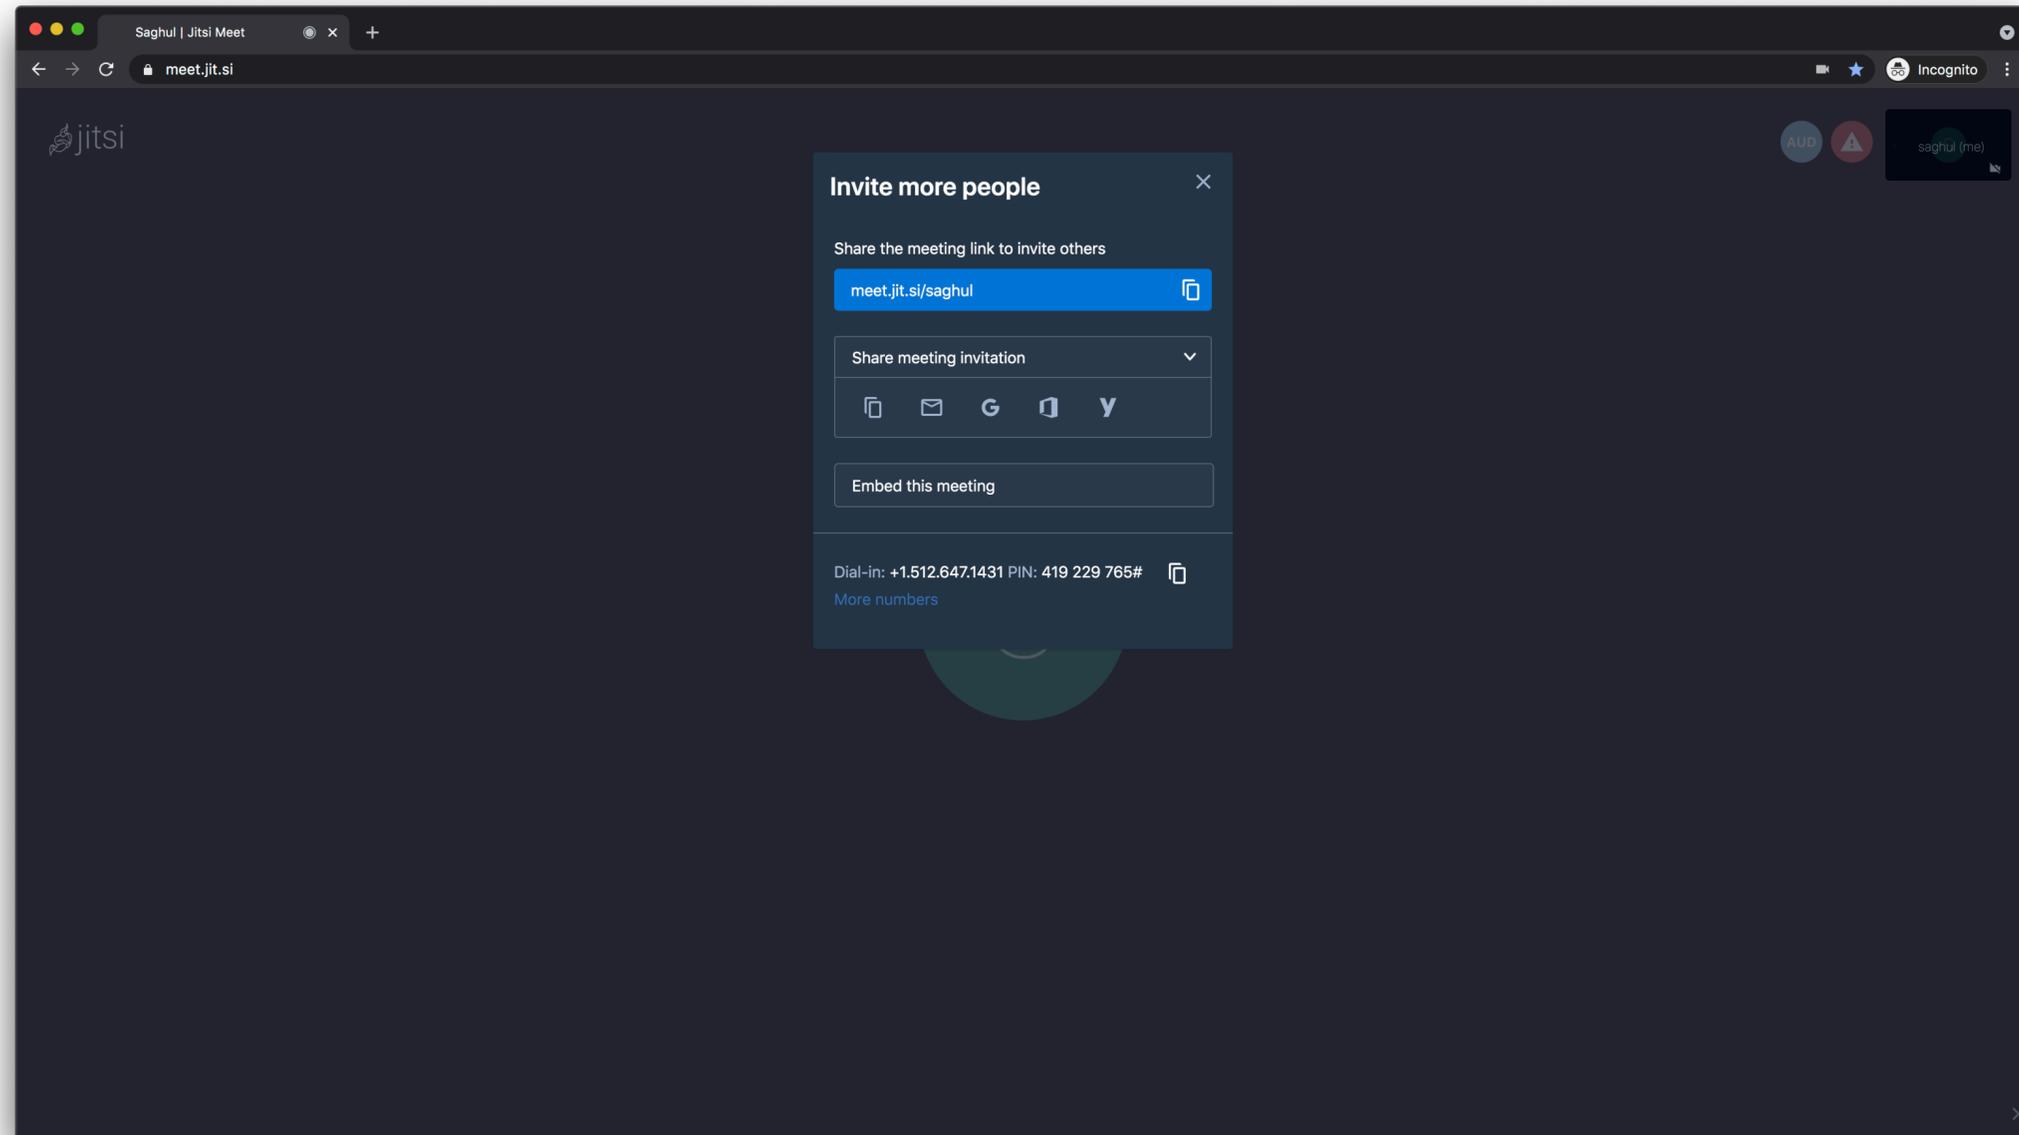

First time users were confused

- Quick indicators for inviting other participants
- New UI for inviting participants
- New UI with security options
- Improved safety measures

Improved “lonely” UX

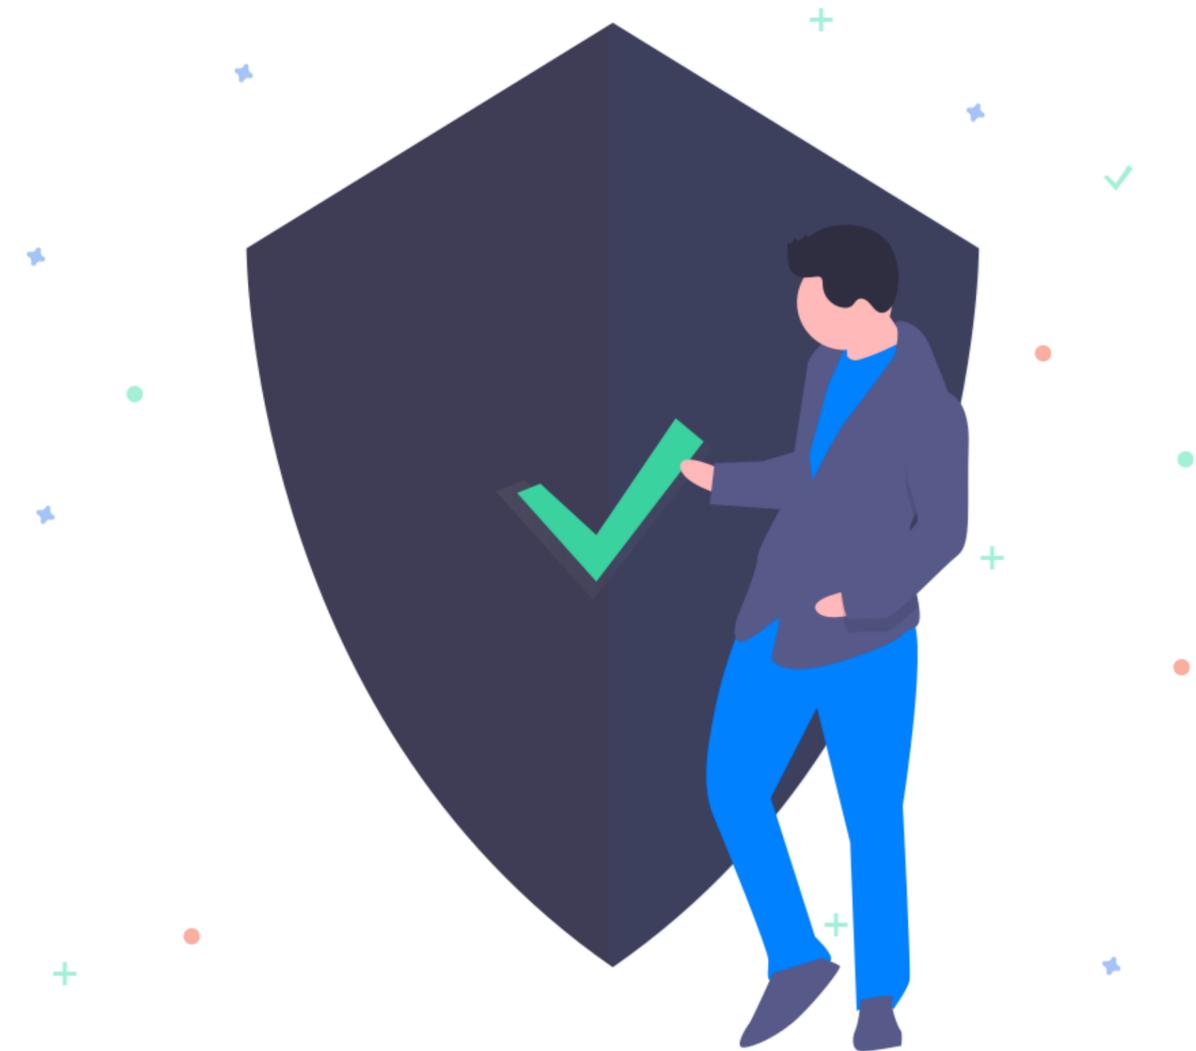

Improved invite UX

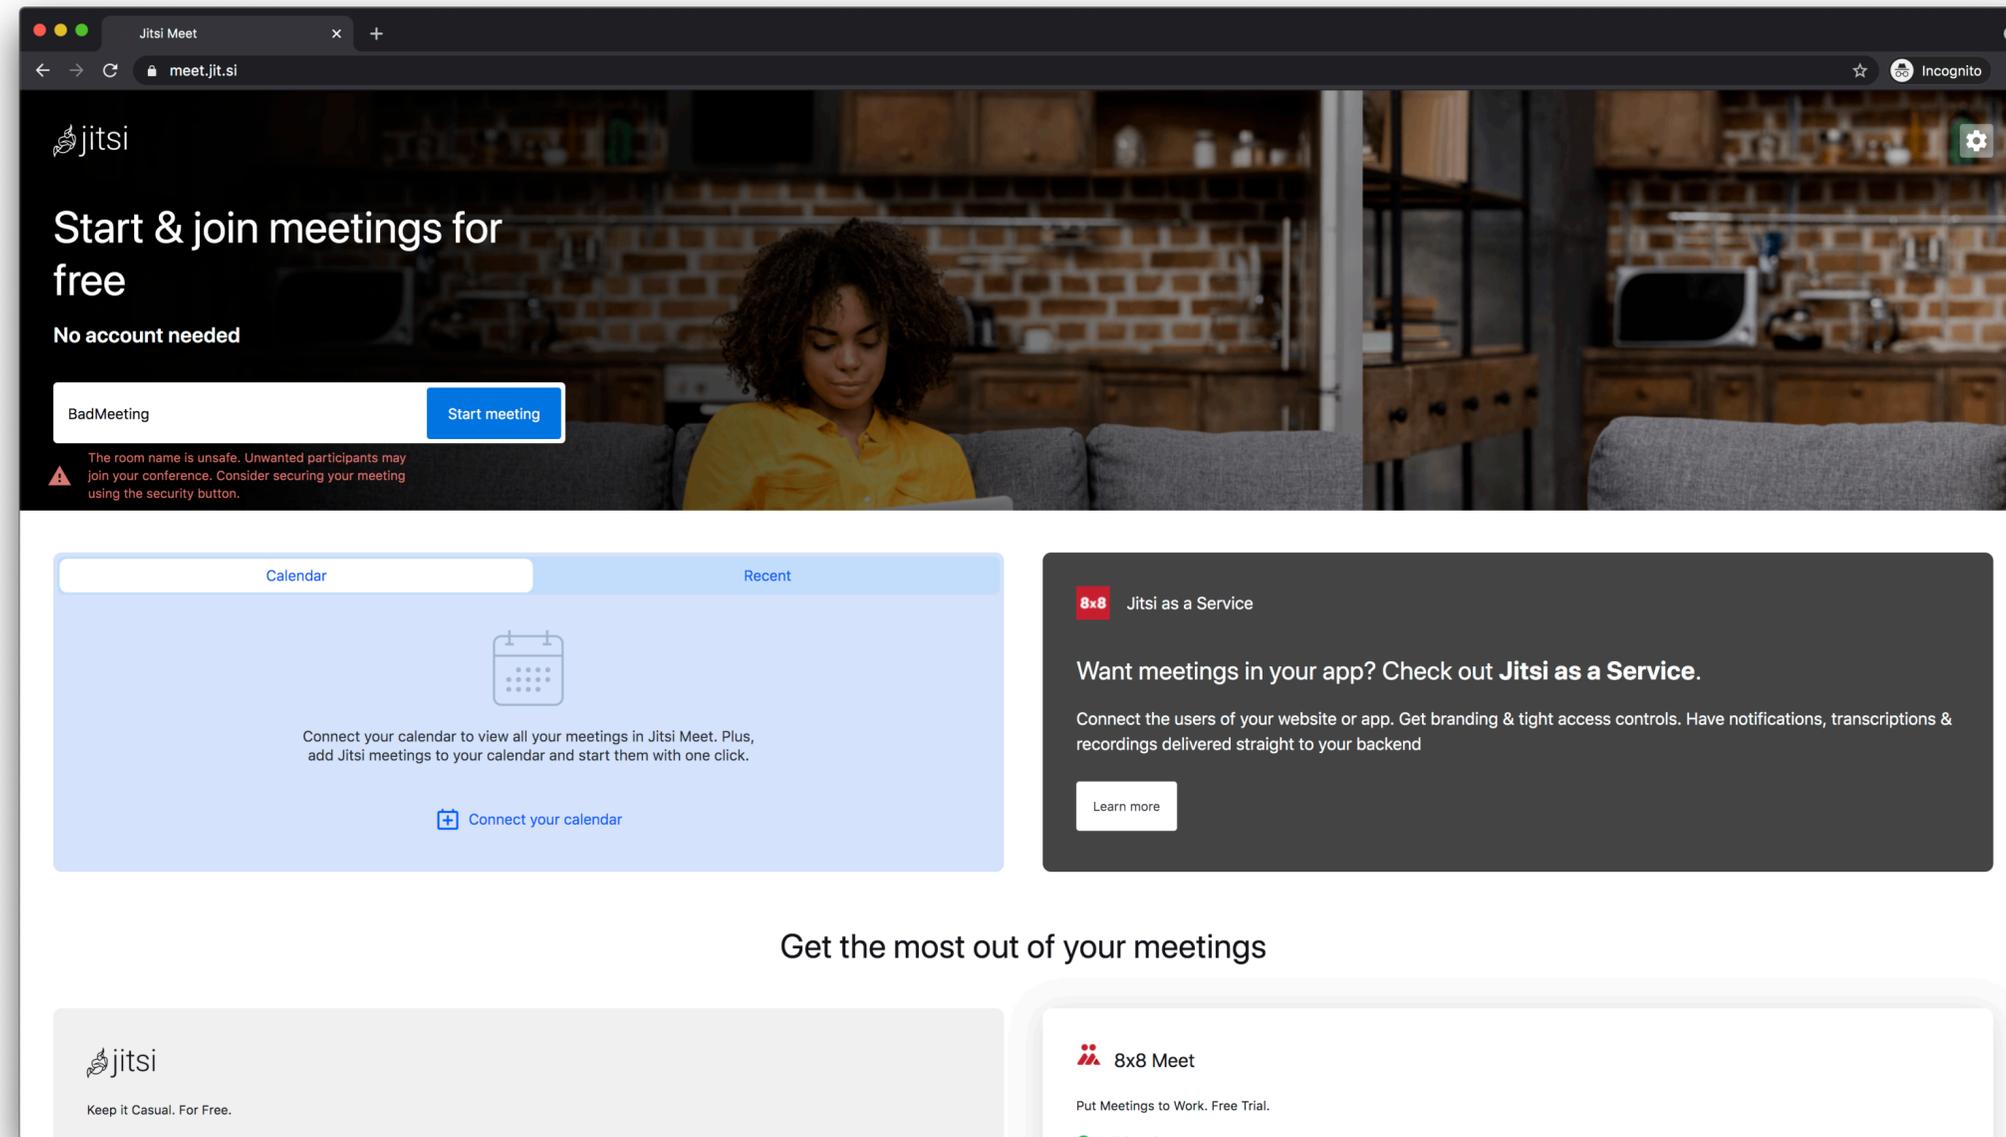

Doubling down on security and safety

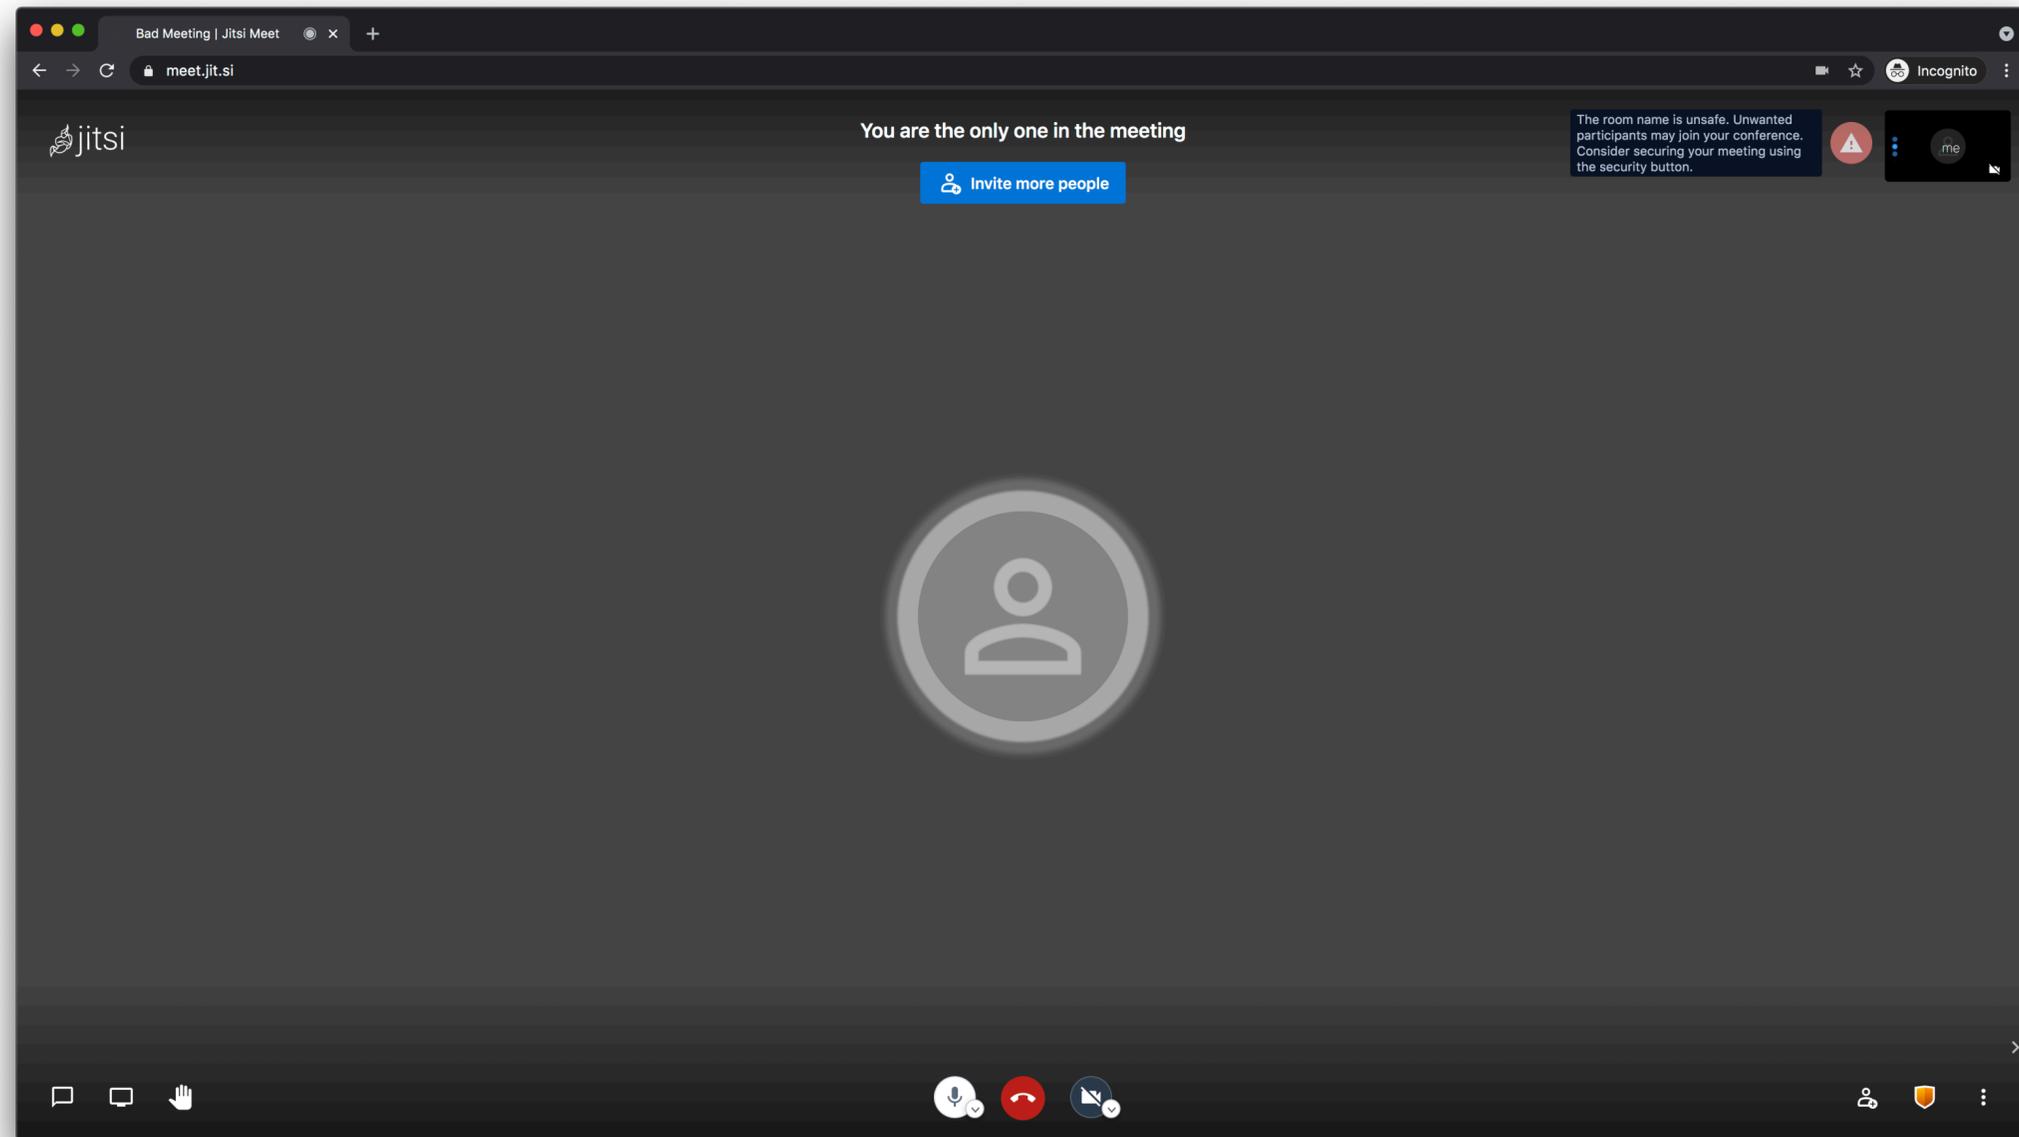

- It's challenging fight abuse in anonymous systems
- Users want more private, safer meetings: the warnings, prejoin and lobby are our answer to that
- Checkout my End-to-End Encryption talk on the RTC track!

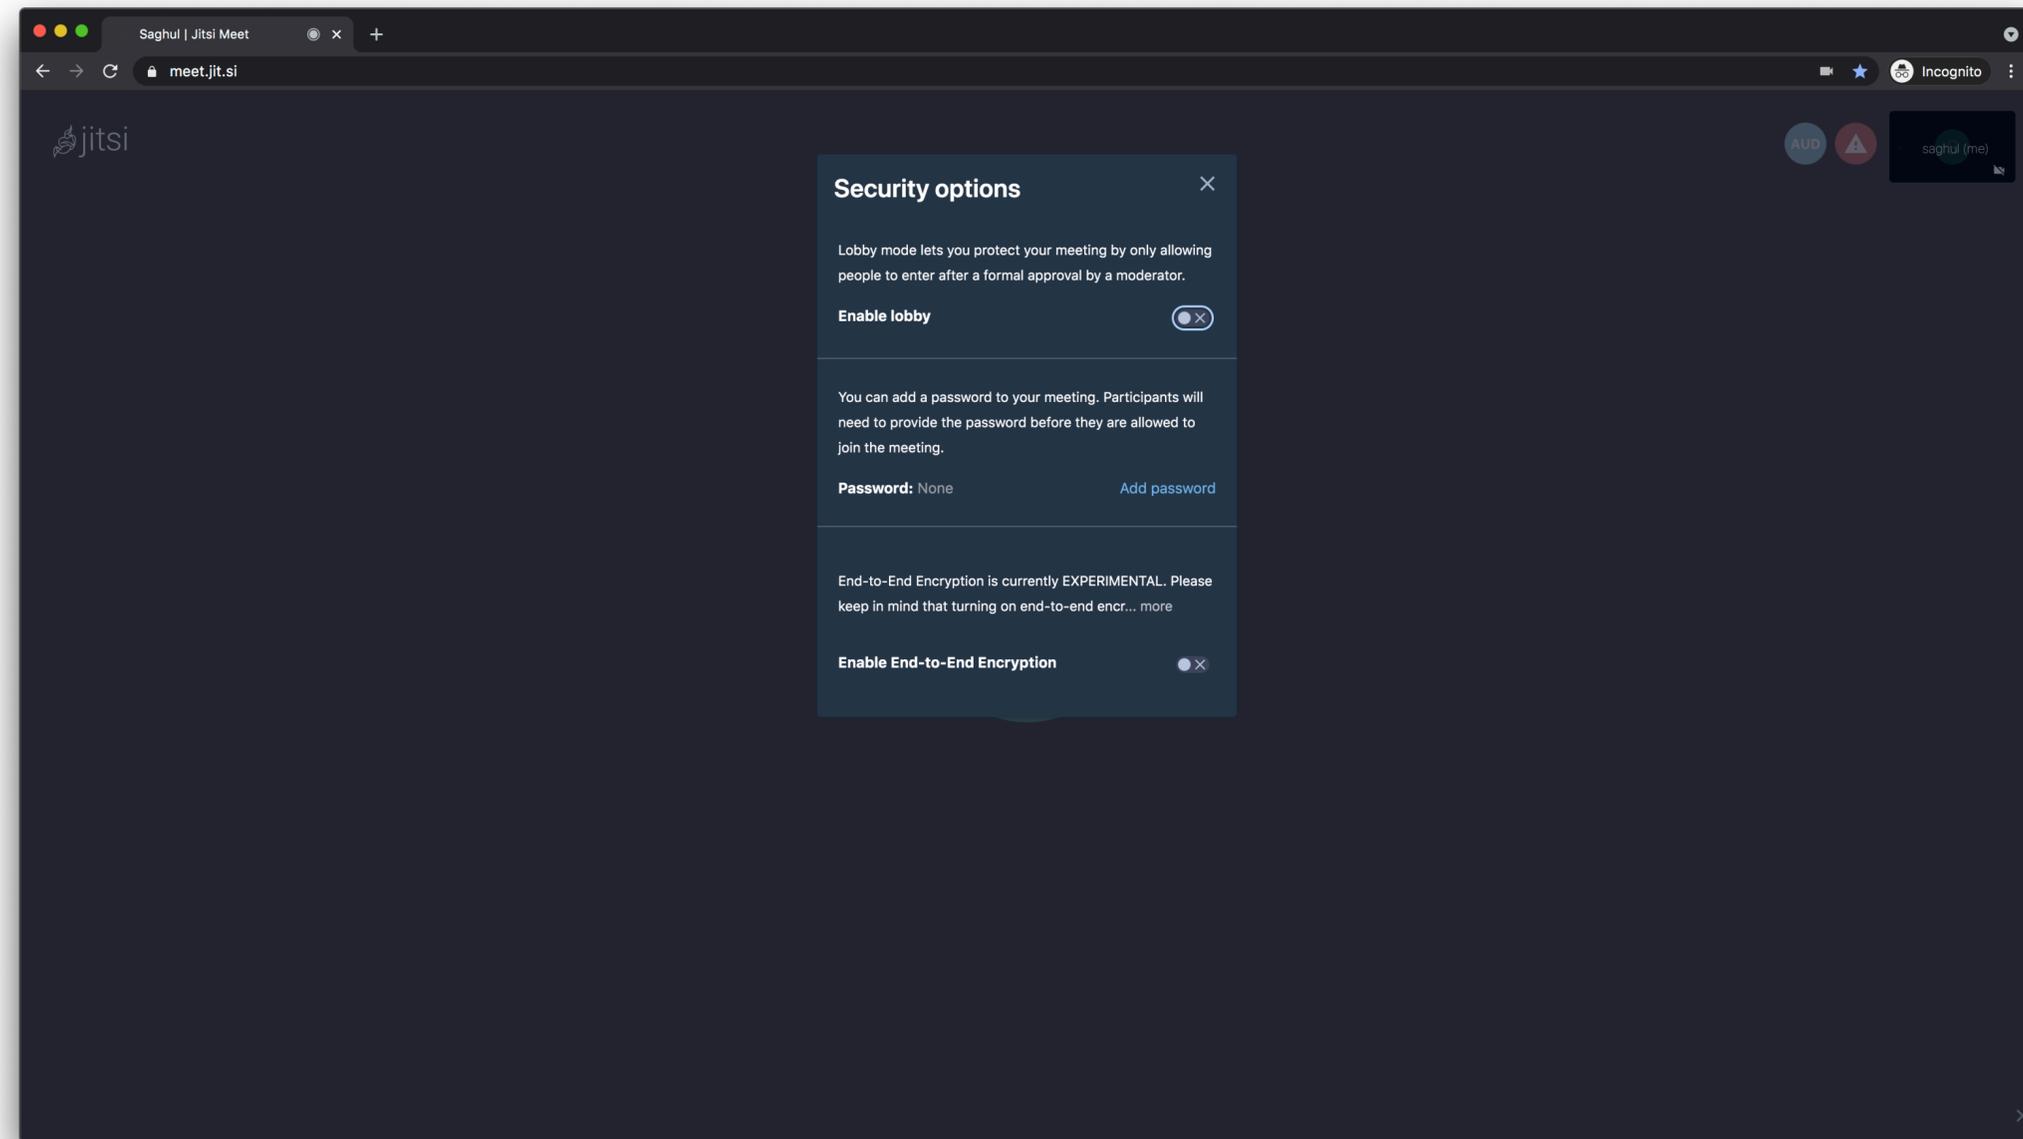

Unsafe meeting UX (I)

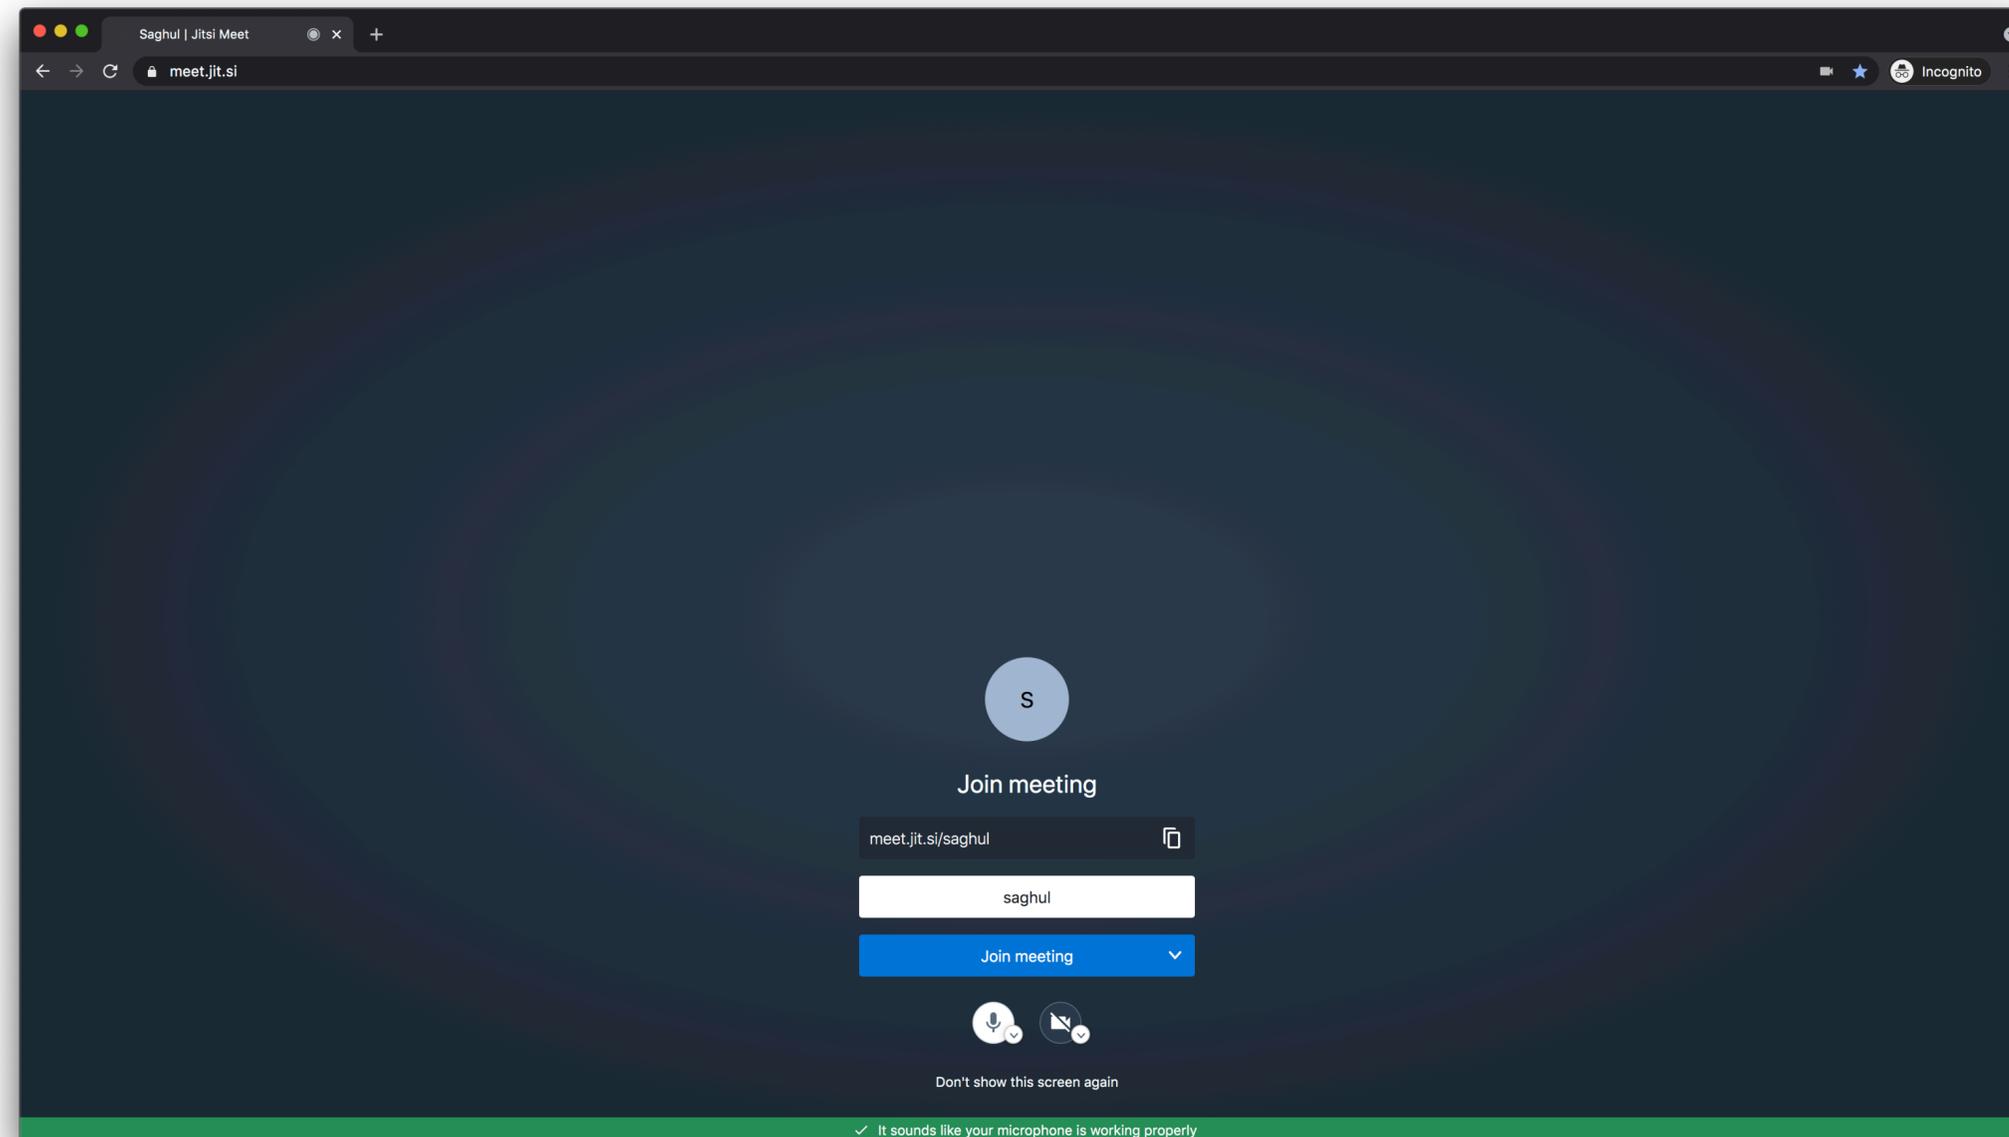

Unsafe meeting UX (II)

New security dialog

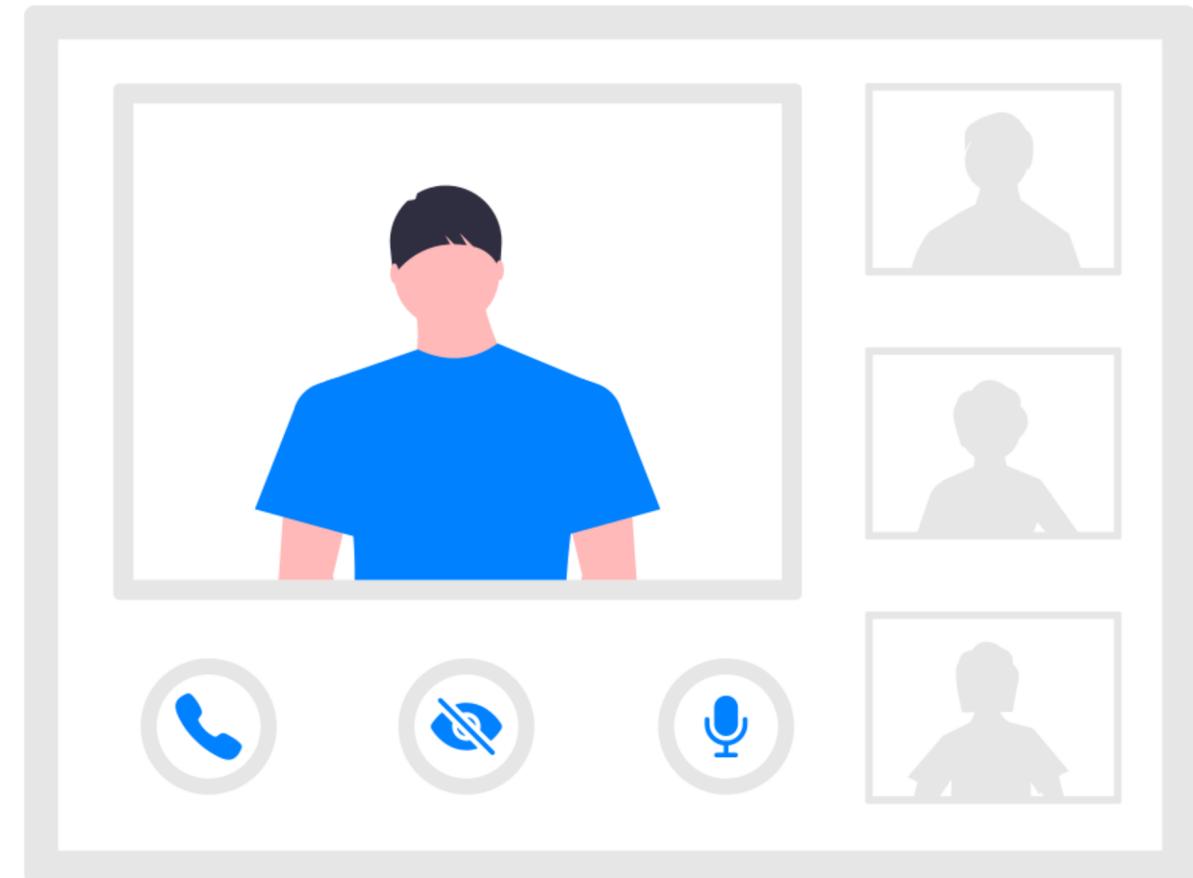

Prejoin screen

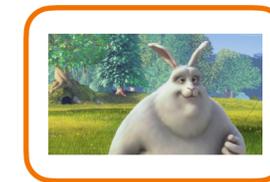

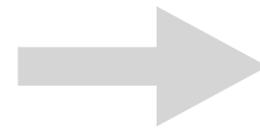

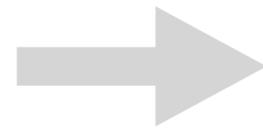

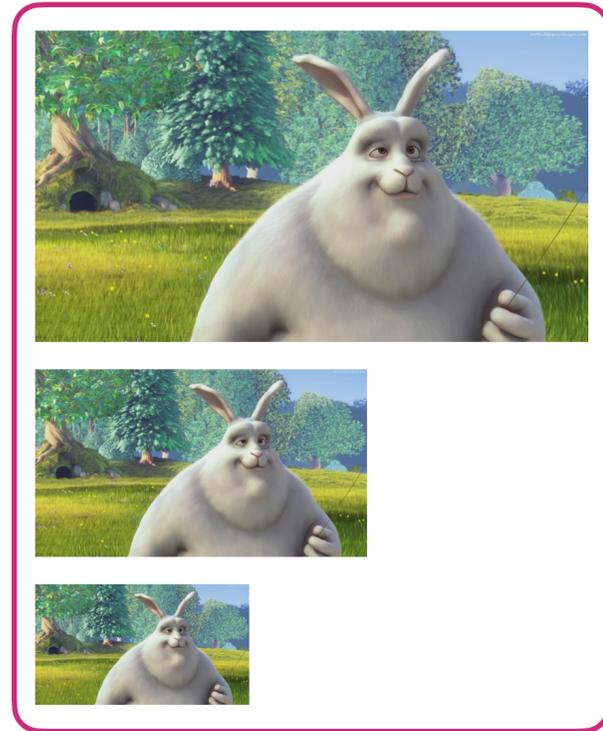

Optimizing sender video

For better CPU and bandwidth usage

- Auto tile view for > 2 participants
- Layer suspension

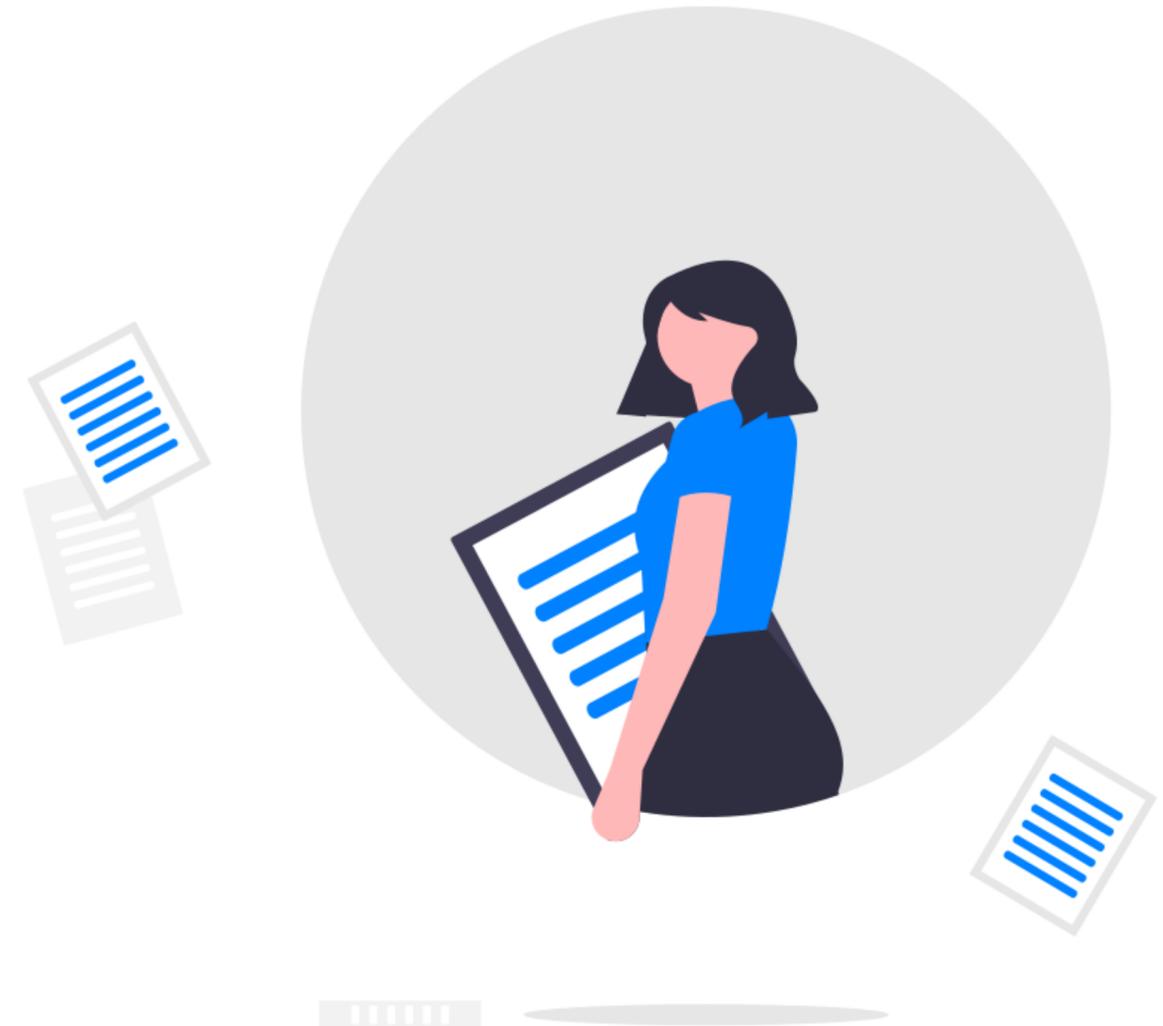

A quick simulcast primer

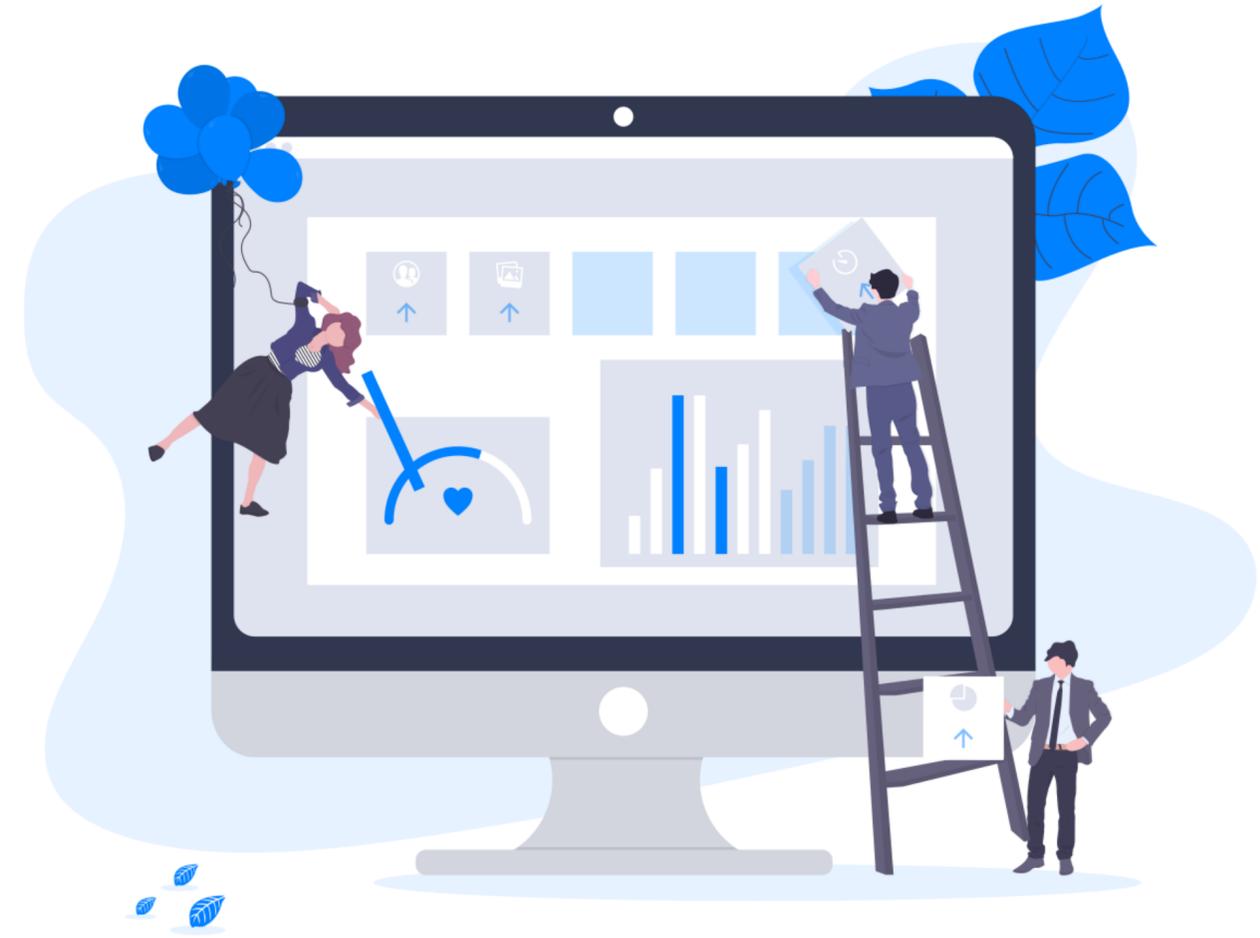

Documentation

We have a handbook now!

- Comprehensive guide to all of Jitsi Meet
- Lots of community contributions
- <https://jitsi.github.io/handbook/>

Some numbers

60x

More conferences

300x

More participants

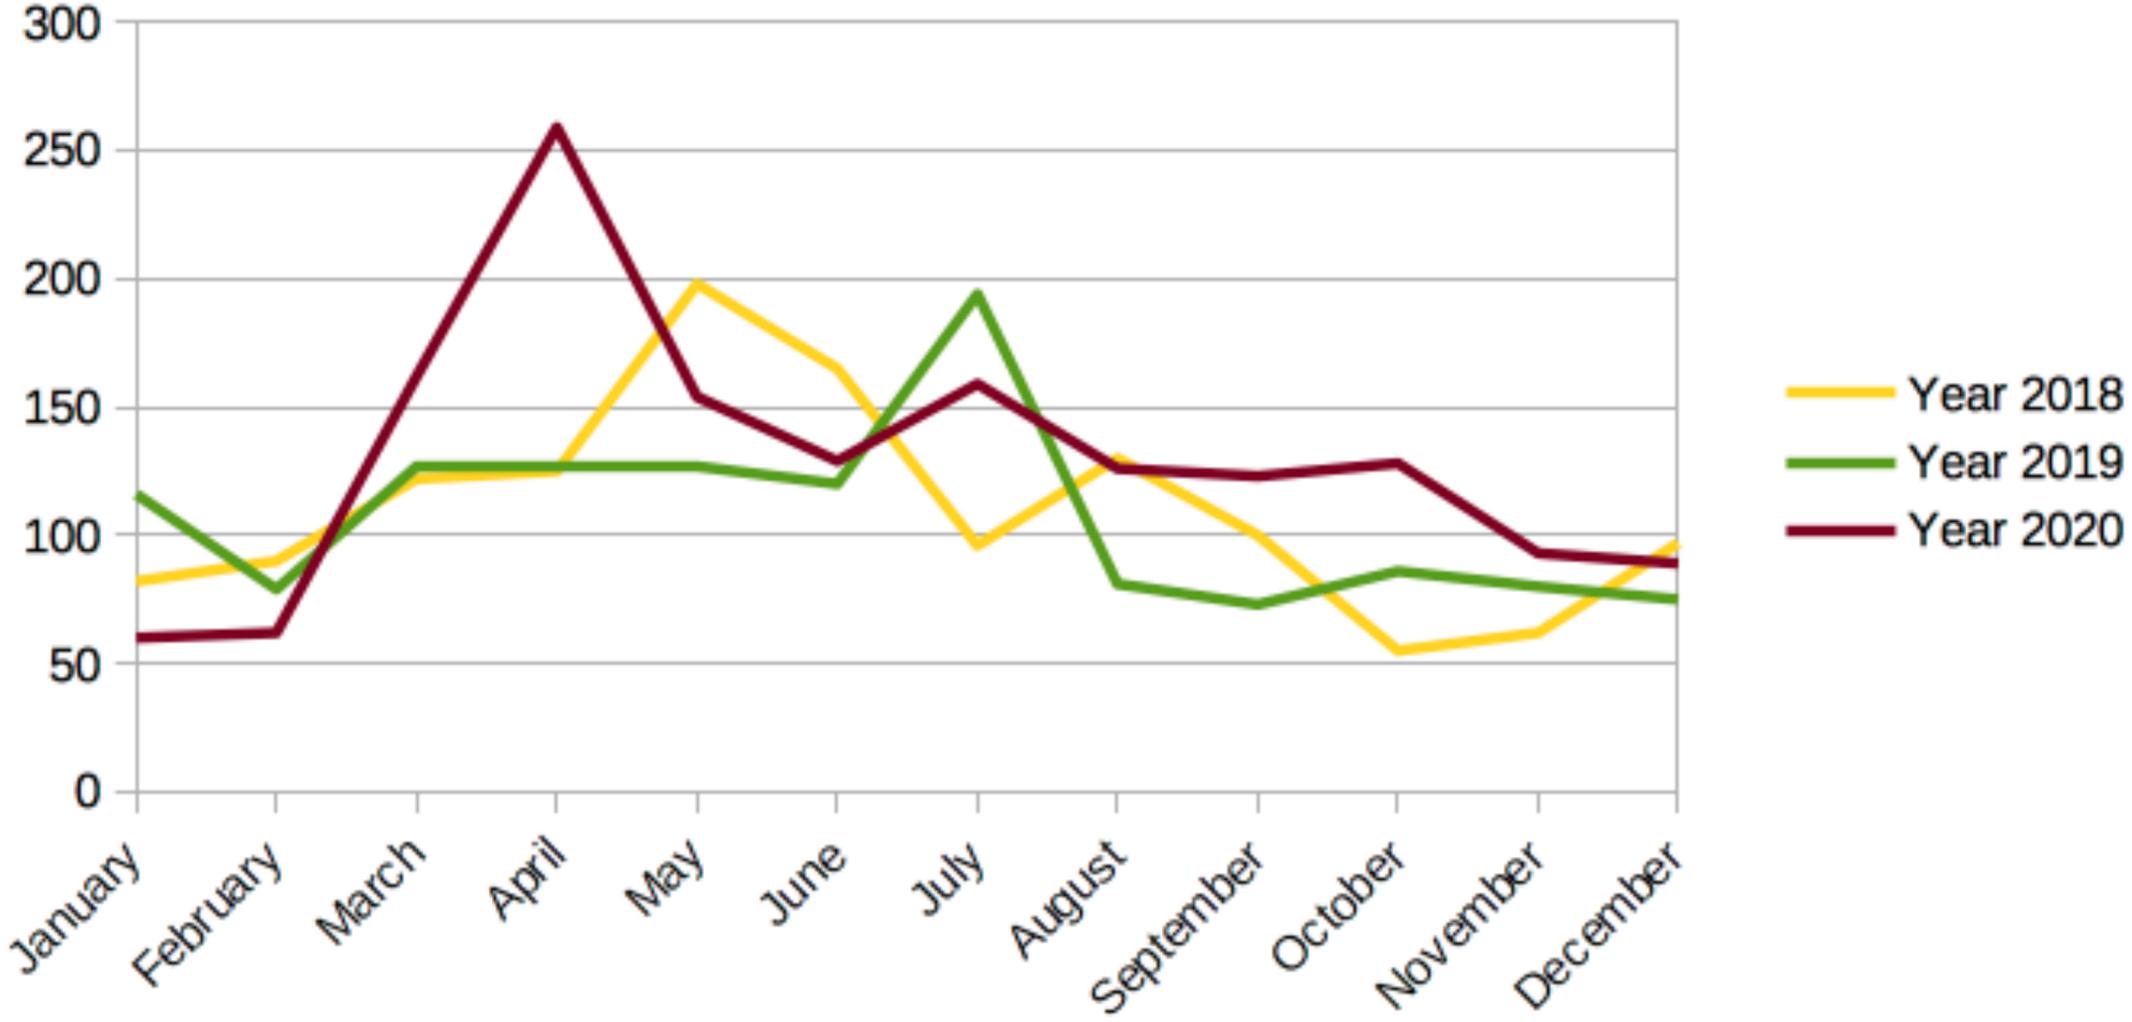

180x

More network traffic

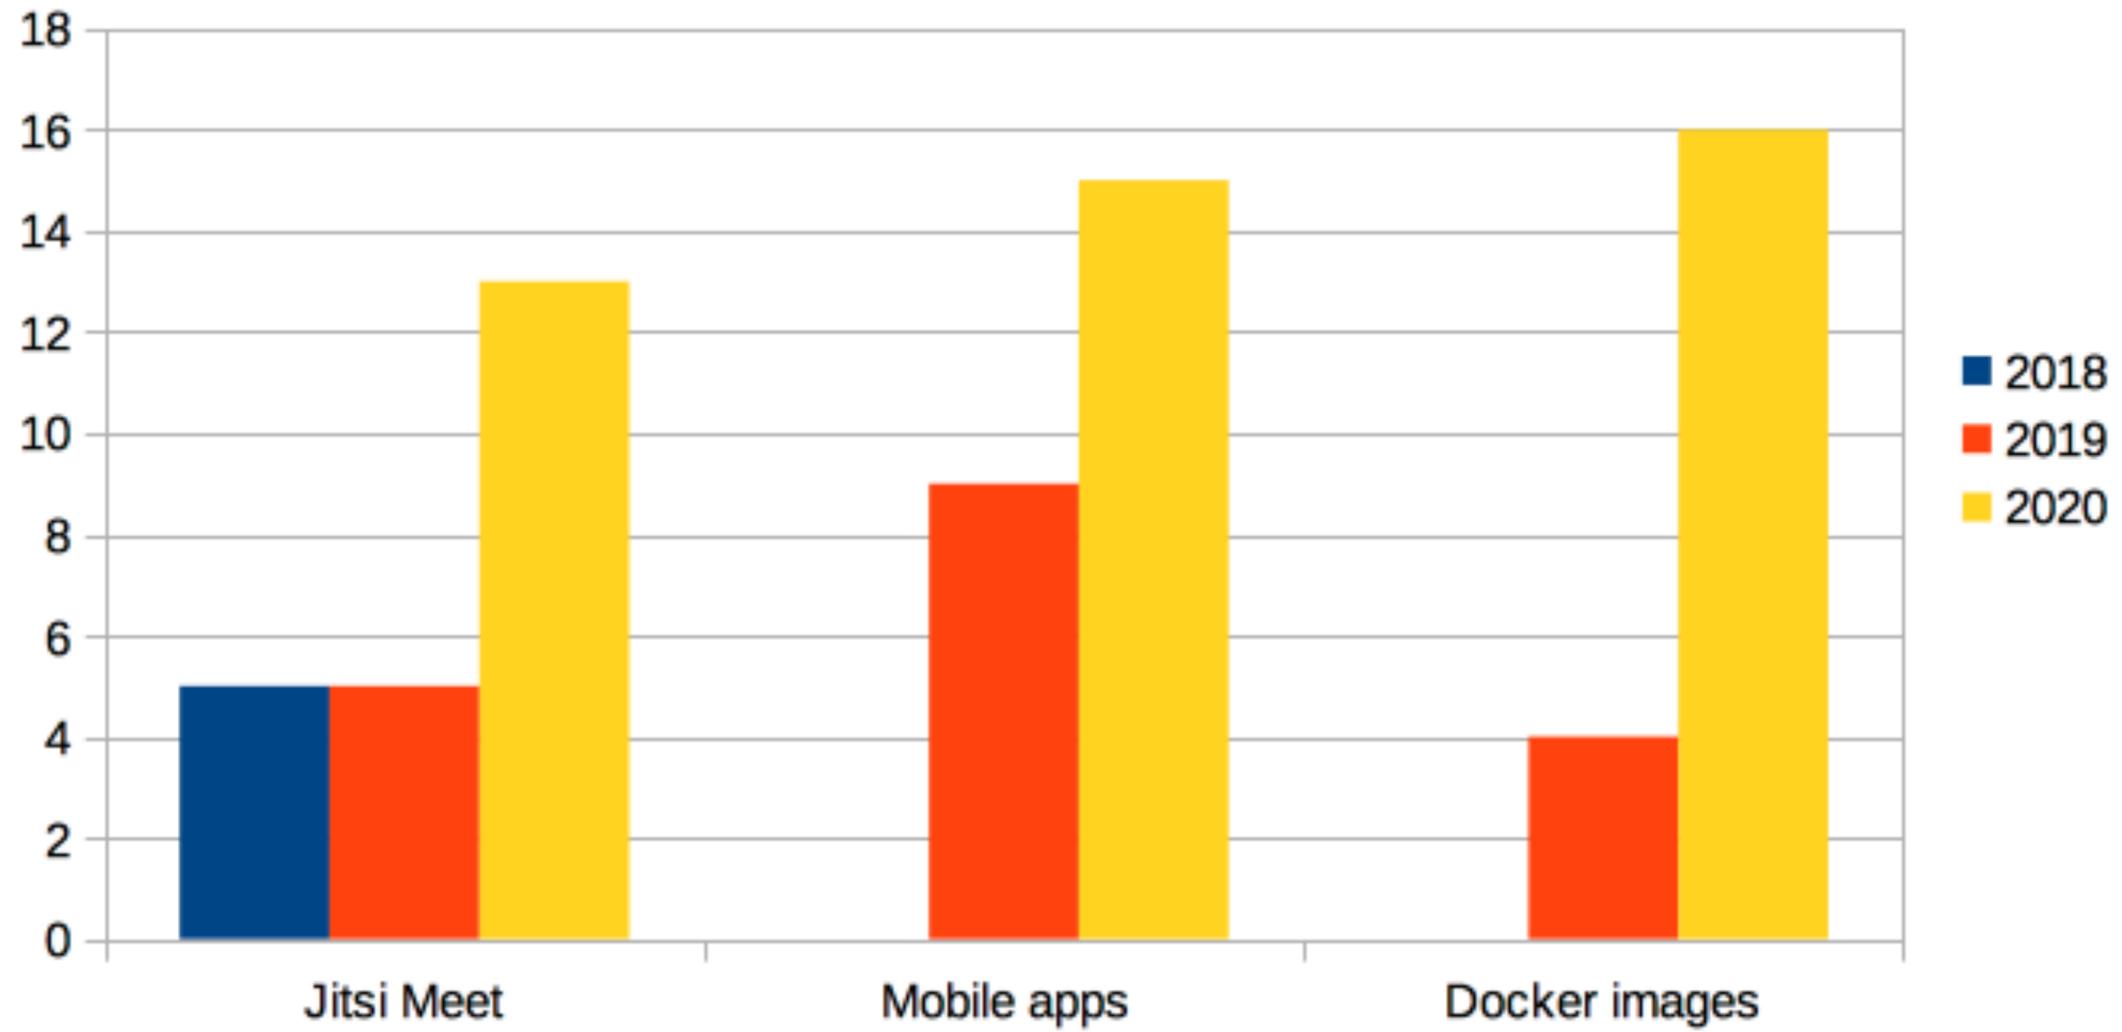

**1000s of
servers**

As opposed to just 10s

Commits per month

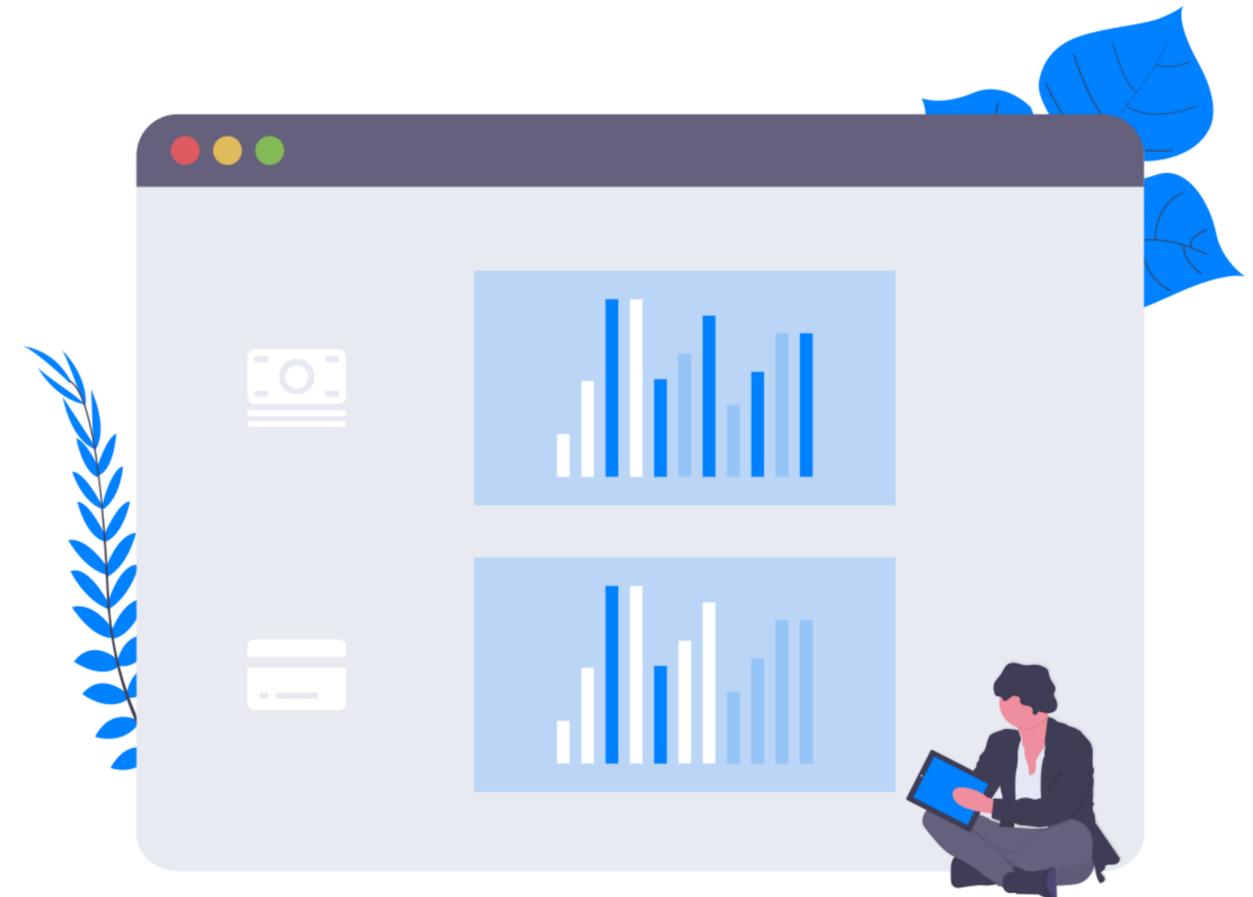

Releases per year

Scaling up revenue

Let's talk about the elephant in the room

Introducing new Jitsi Meet based products

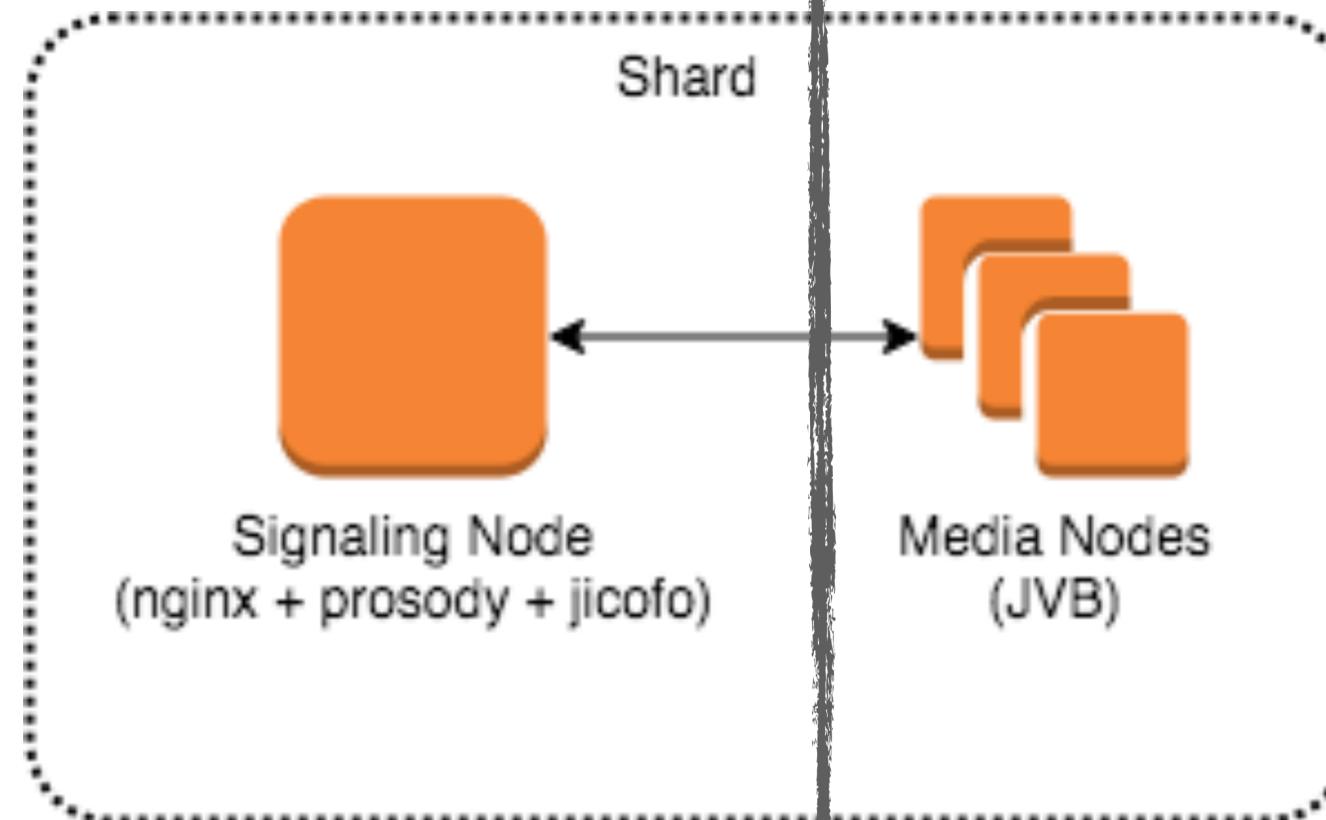

From 8x8, Inc.

- meet.jit.si — The canonical free meetings offering
- 8x8 Meet Pro — Some extra features (authentication, transcriptions, always on personal space, etc.)
- Jitsi as a Service (JaaS) — The flexibility of custom configuration without having to maintain the infrastructure yourself
- Help make the project more sustainable

meet.jit.si

**Infrastructure overview
(post-COVID19)**

**50% less
servers**

Same capacity (goal)

Thanks!
