

Get to Know Apache Kafka with Jupyter Notebooks

Why Jupyter Notebooks

Kafka Producer

Now we can create a Kafka Producer

Markdown Text

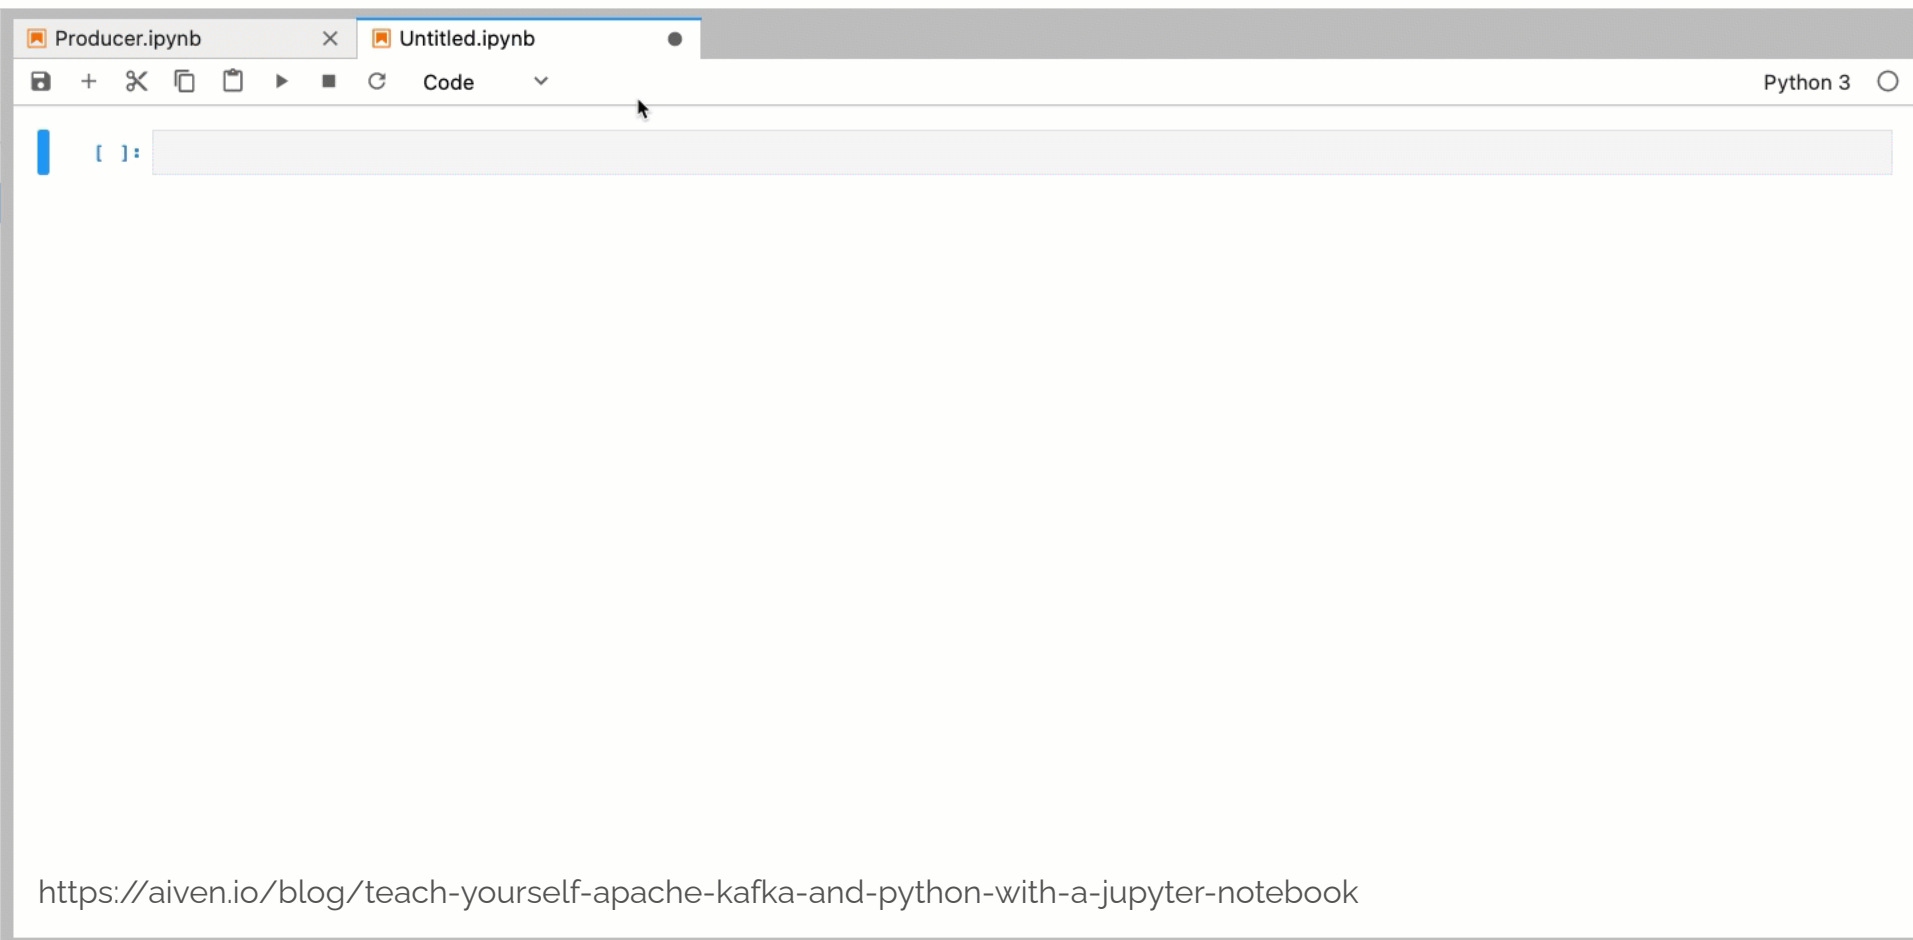

Images

we need to have an Apache Kafka instance already available, if not you can easily create one on [Aiven.io](https://aiven.io)

Executable Code

```
[2]: from kafka import KafkaProducer
import json
from config.kafka_config import *

producer = KafkaProducer(
    bootstrap_servers=hostname+":"+str(port),
    security_protocol="SSL",
    ssl_cafile=cert_folder+"/ca.pem",
    ssl_certfile=cert_folder+"/service.cert",
```

Event-Driven Applications

What is an Event

Why Event Driven?

What is Kafka

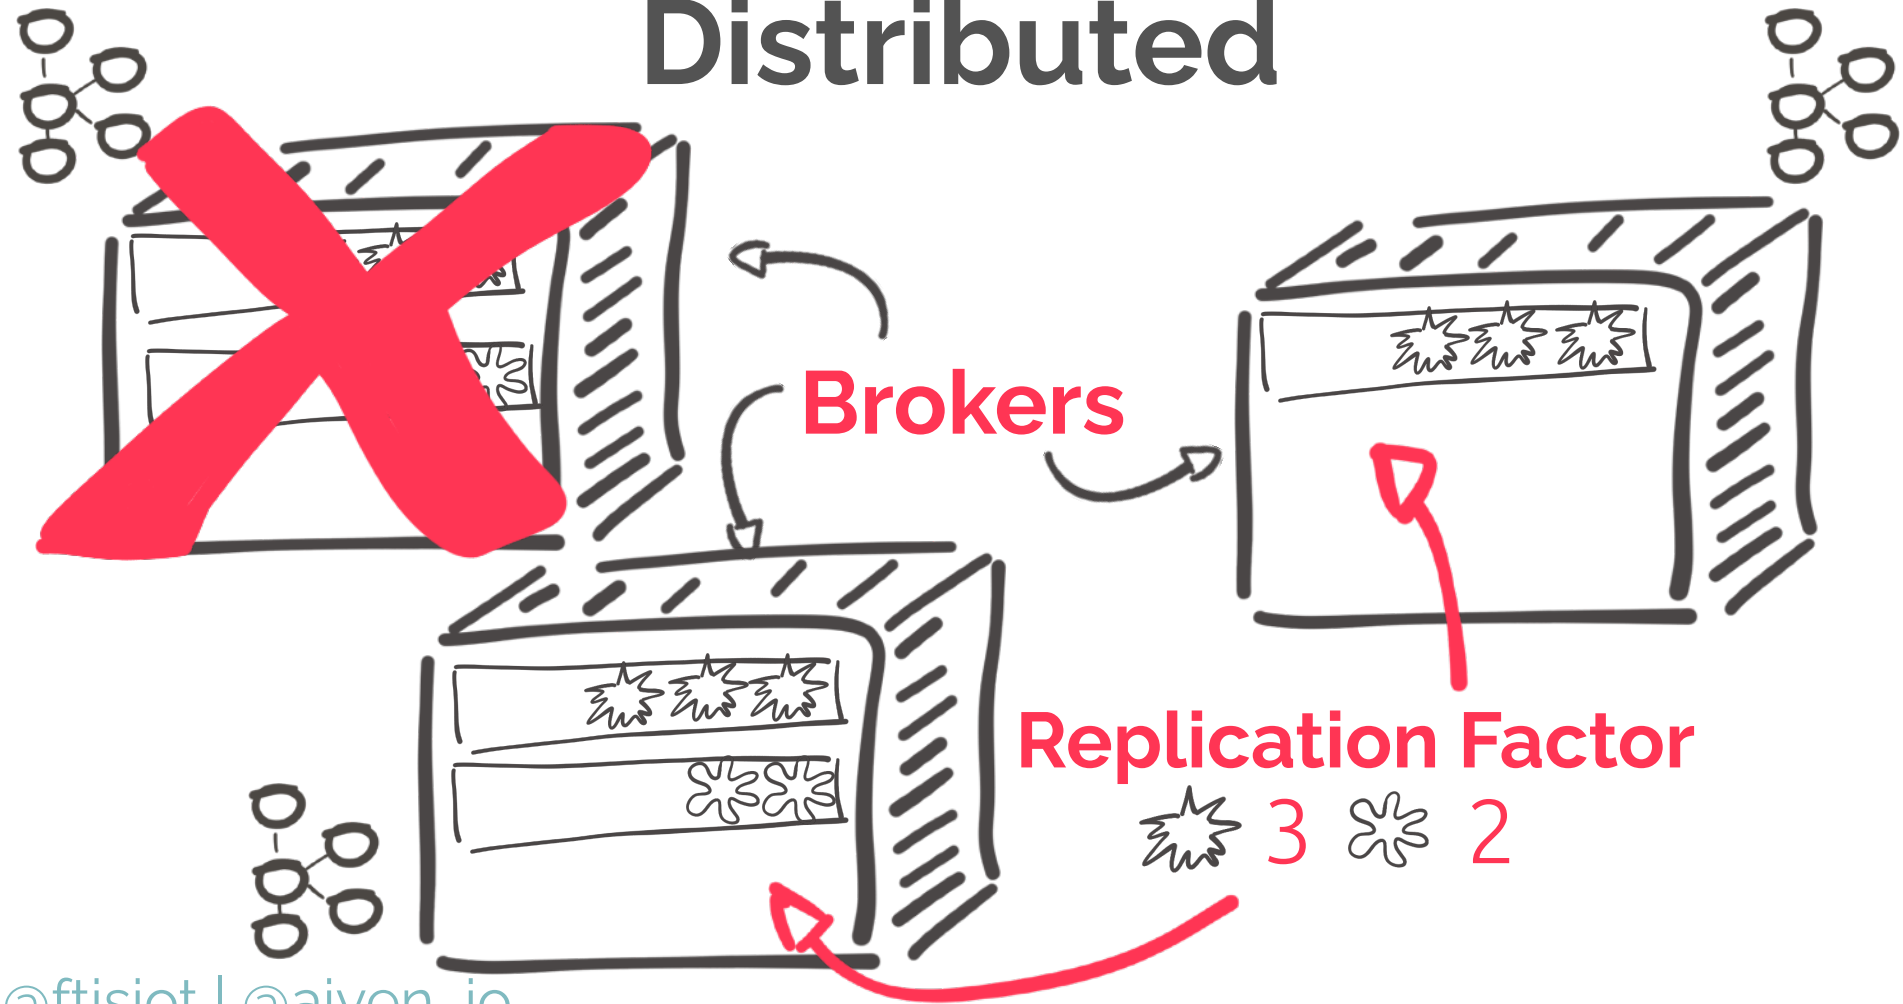

Topic A

Topic B

Distributed

What's a Kafka Event?

<K, V>

<"temp_max", 35.3>

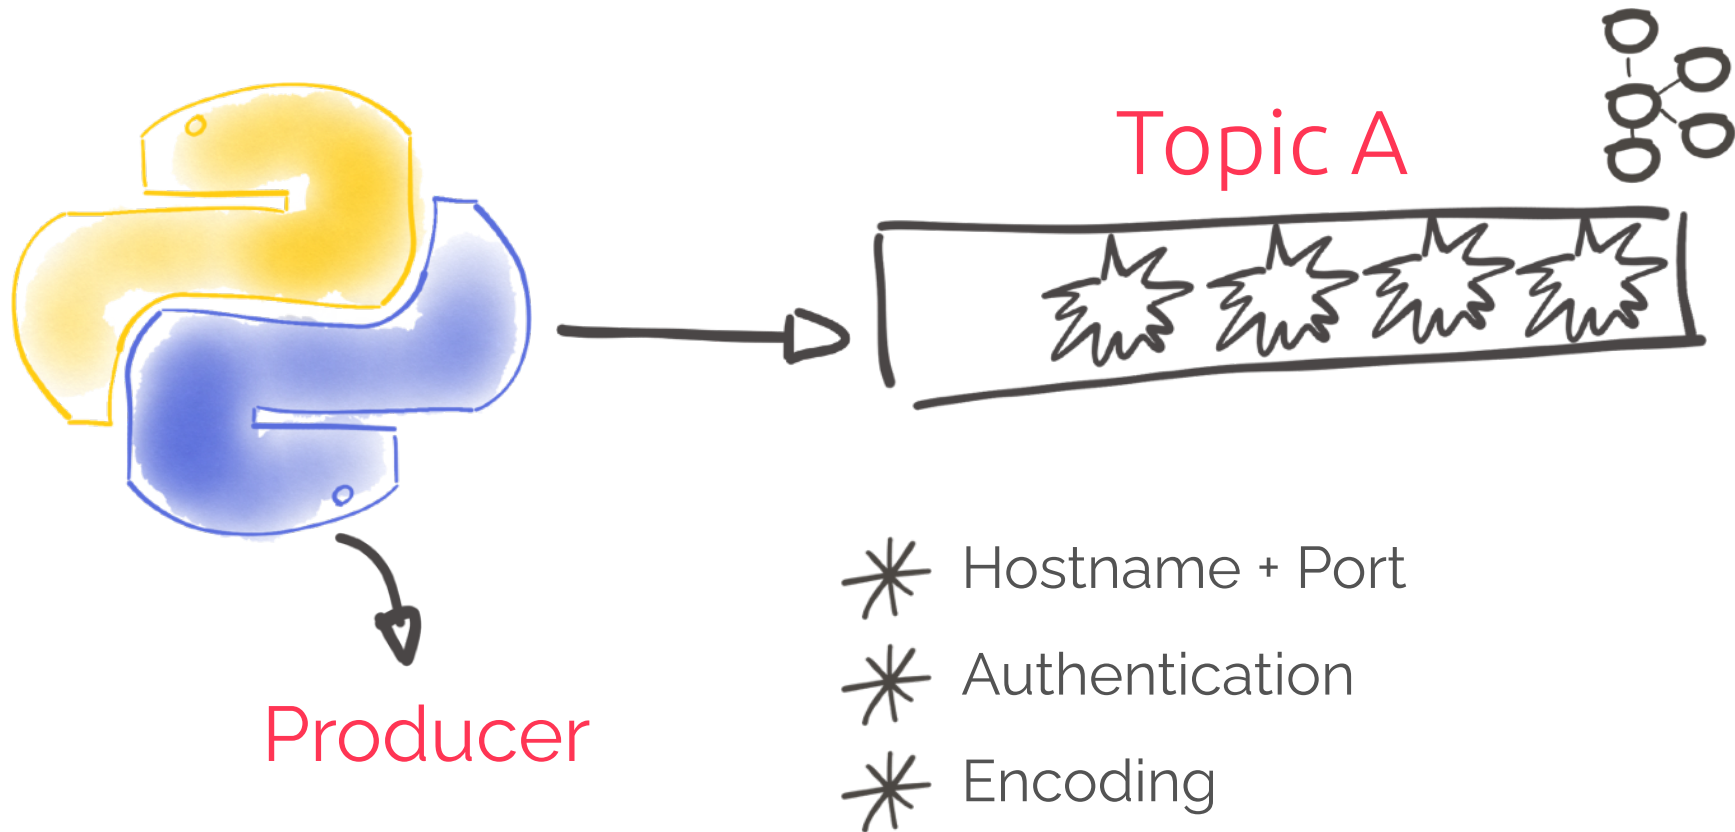

```
{  
  shop: "Mario's Pizza",  
  phone_line: 3  
}
```

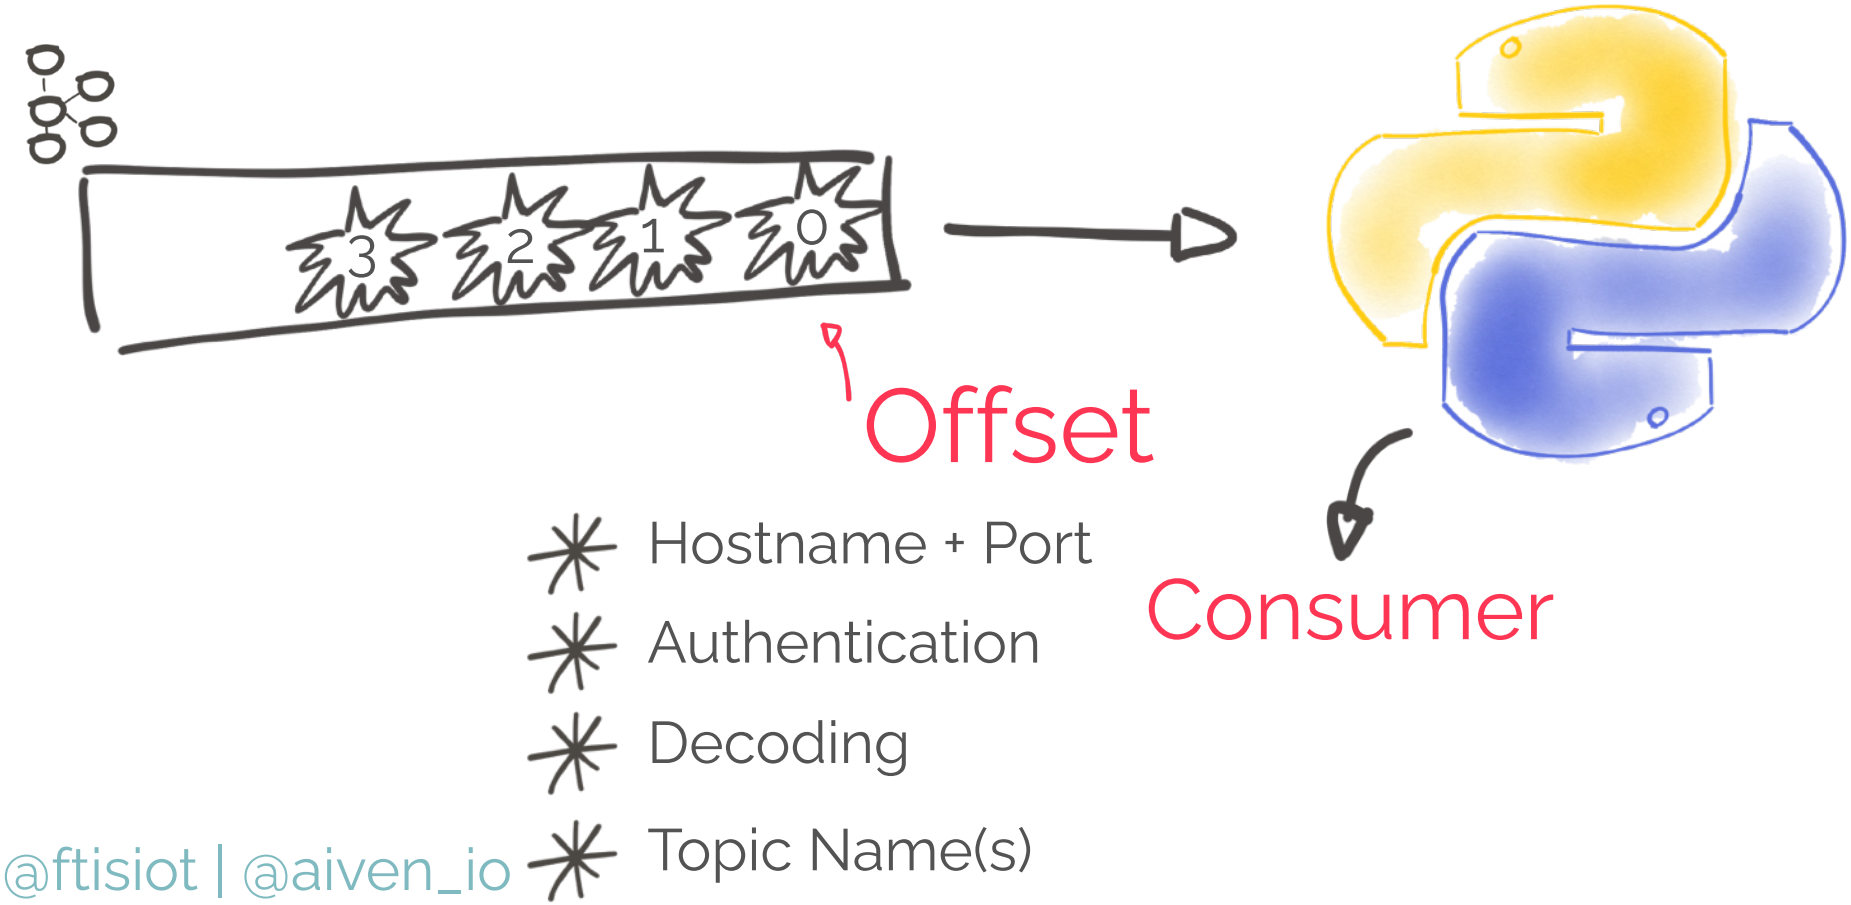

```
{  
  orderId: 123456  
  name: "Andrea Pirlo",  
  pizzas: [  
    {  
      pizza: "Margherita",  
      additionalToppings: ["Tuna","Onions","Ham"]  
    },  
    ...  
  ]  
}
```

Write to Kafka

Read from Kafka
