

How we build and maintain Kairos

A day in the life of a meta distribution

Mauro Morales

Open-Source Developer

FOSDEM 23

Kairos

About me

Mauro Morales

Originally from Guatemala, now living in Belgium

My first distro was MEPIS and my daily driver is openSUSE Tumbleweed

Ruby & Go developer

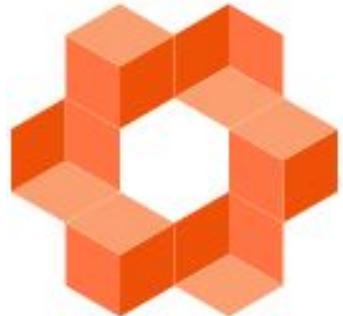

github: <https://github.com/mauromorales>

twitter: [@mauromrls](https://twitter.com/mauromrls)

web: <https://mauromorales.com>

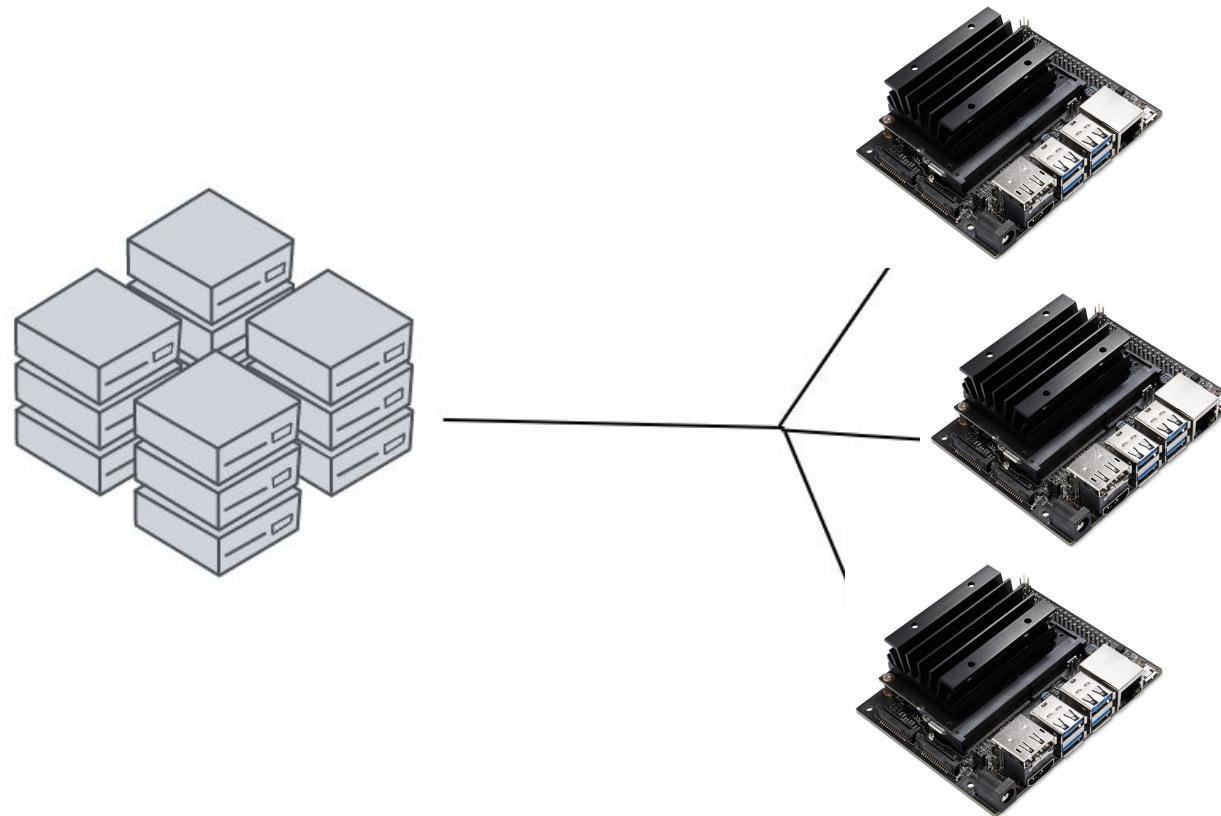

What is Kairos?

What is Kairos?

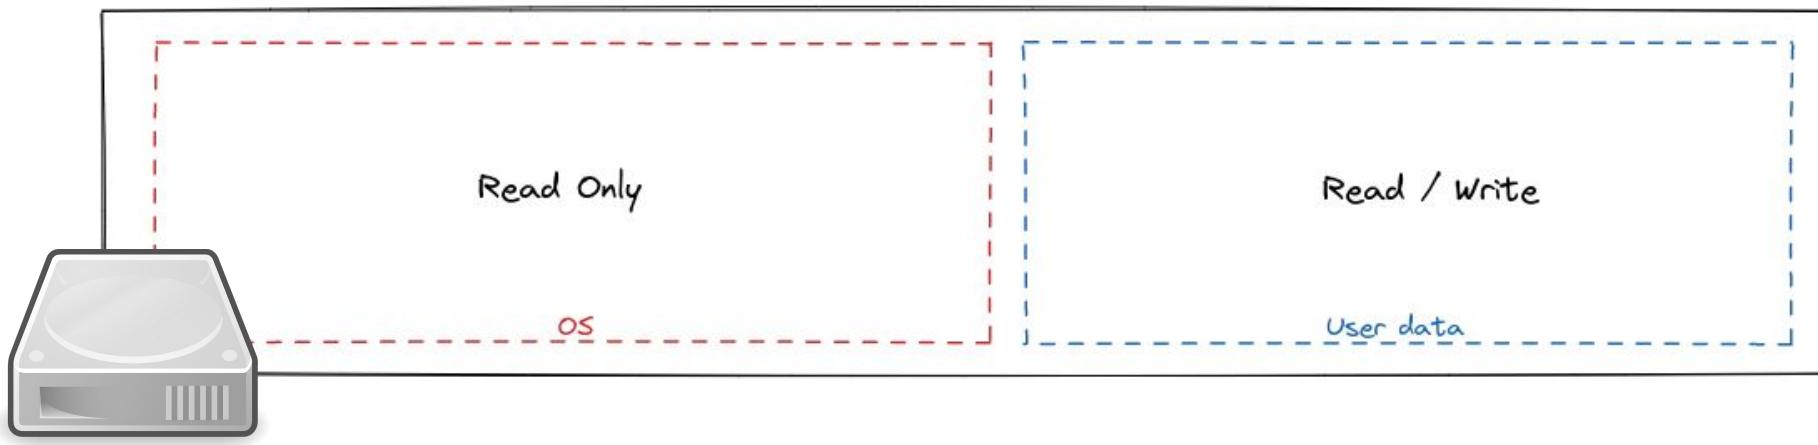

The immutable Linux meta-distribution for
edge Kubernetes

What is Edge Computing?

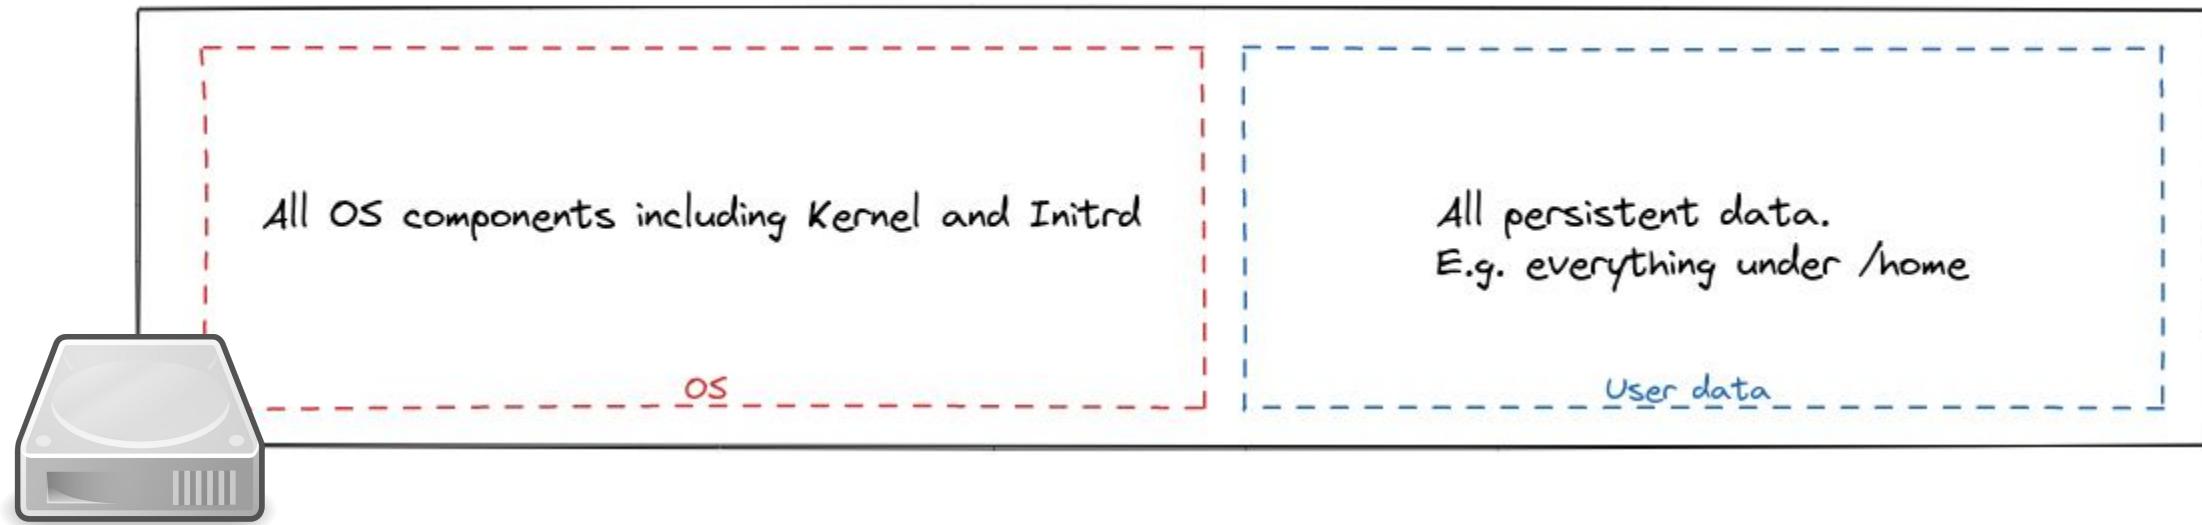

Kairos is Immutable

Kairos is Immutable

Kairos is Distribution Agnostic

Know-how

Licensing

Golden Images

Kairos is easy to configure & maintain

```
#cloud-config

# Define the user accounts on the node.
users:
  - name: "kairos"                      # The username for the user.
    passwd: "kairos"                     # The password for the user.
    ssh_authorized_keys:
      - github:mudler                   # A key from the user's GitHub account.
      - "ssh-rsa AAA..."               # A raw SSH key.

# Enable K3s on the node.
k3s:
  enabled: true                         # Set to true to enable K3s.
```

Kairos is easy to configure & maintain

```
#cloud-config

# Define the user accounts on the node.
users:
- name: "kairos"
  passwd: "kairos"
  ssh_authorized_keys:
  - github:mudler
  - "ssh-rsa AAA..."

# Enable K3s on the node.
k3s:
  enabled: true
```

The screenshot shows the Kairos Web Installer interface at 192.168.122.110:8080. The title bar includes the Kairos logo and 'Web Installer'. A large green 'NEW' badge is visible on the right. The main page has a heading 'Welcome to the Installer!', a sub-instruction 'Enter your [cloud-config config configuration file](#) and select the device to install on:', and a note 'Need help with your cloud config? Check out our [documentation on where to find examples.](#)'. Below this is a dark panel labeled 'Cloud Config' containing the #cloud-config YAML. At the bottom, there's a 'Device' dropdown set to 'auto', and two checkboxes: 'Reboot after installation' and 'Power off after installation'. A prominent blue 'Install' button is at the bottom right.
