

**FOSDEM**'24

# Empowering FreeIPA: a dive into the modern WebUI

4 February 2024 | Brussels, Belgium

Francisco Triviño <[ftrivino@redhat.com](mailto:ftrivino@redhat.com)>

# Agenda

- ▶ Introduction on FreeIPA WebUI
- ▶ Motivations for the change
- ▶ Modernizing the WebUI
- ▶ Demo
- ▶ Future roadmap

# Introduction on FreeIPA

## Historical context

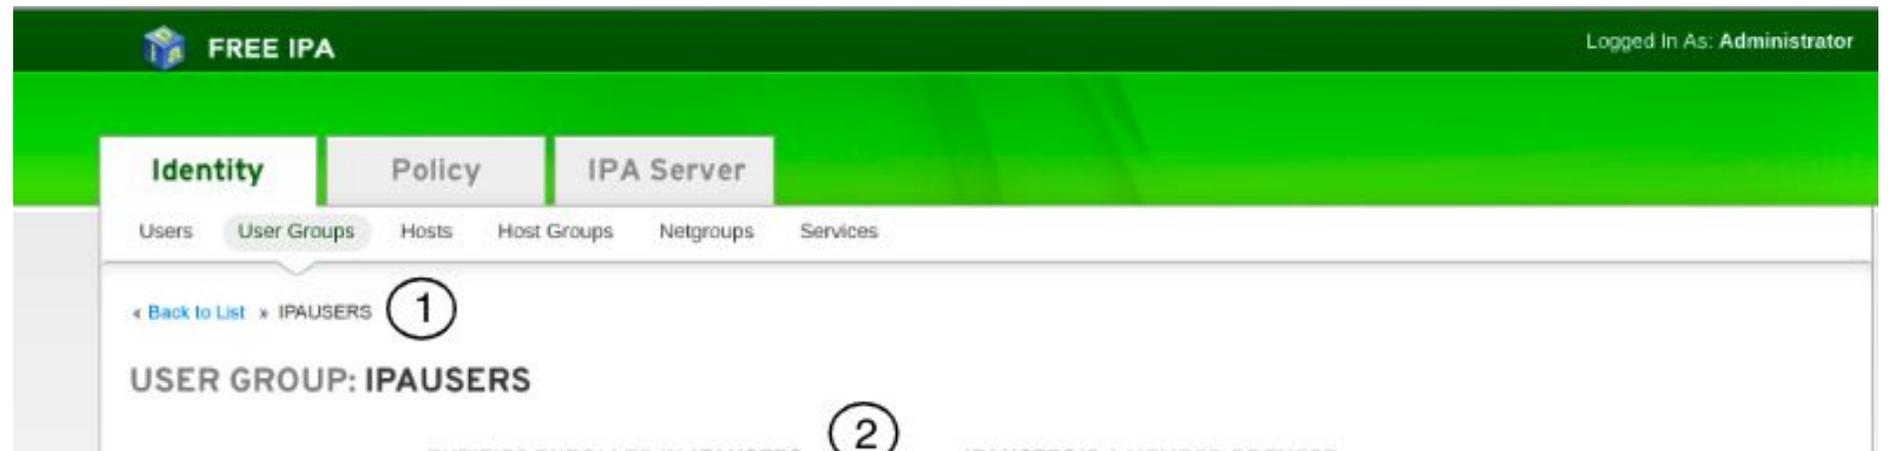

- ▶ FreeIPA is an integrated security information management solution
- ▶ Aims to provide a centrally managed Identity, Policy, and Audit (IPA) system
- ▶ Software components: Linux (Fedora), 389 Directory Server, MIT Kerberos, NTP, DNS, Dogtag (Certificate System), SSSD and other open-source components
- ▶ Management through CLI and web interface (WebUI)
- ▶ First version released on **Aug. 1st 2007**

# Introduction on FreeIPA WebUI

## Historical context

### First versions:

- ▶ Goal: to have parity between the UI and CLI
- ▶ Based on TurboGears
- ▶ Tech stack: C++, Python, JavaScript (jQuery). Basically, a single page application built with vanilla JavaScript
- ▶ Problems: it was needed to optimize the number of HTTP requests and minimize the JavaScript file sizes (the WebUI used a lot of JS files)

# Introduction on FreeIPA WebUI

## Historical context

### Current WebUI:

- ▶ Dojo library was used to provide modules, build, and router functionality
- ▶ Improvement: Transforming FreeIPA JavaScript packages into AMD modules to build them into a single file → This would reduce the number of JS files to be processed
- ▶ WebUI directory structure changed to better adapt to this transformation
- ▶ 2014: The styles and code were changed to match RCUE (Red Hat common user environment) → Which later became PatternFly

	User login	First name	Last name	Status	UID
<input type="checkbox"/>	admin		Administrator	✓ Enabled	1142400000

# Motivations for the change

## Why

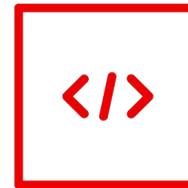

### PatternFly 2 unsupported

Fixing/evolving the webUI is difficult with no active PF2 community of developers

### PatternFly 5 supported

Better accessibility, an active toolkit community, and portfolio alignment

### React to replace Dojo

Modern, secure, popular, and can use with specific framework-related libraries

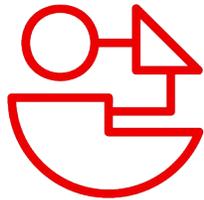

### Persistent problems

Accessibility / responsiveness issues, data limits, requests blocked by current implementation

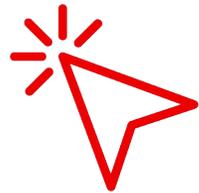

# Motivations for the change

## How

### Revisited architecture

Coding best practices,  
updating communication layer,  
and QE testing

### Targeted enhancements

Make the application better to  
use, while minimizing disruption  
for current users

### Better documentation

Enhance the  
documentation sources to  
be accessible for upcoming  
contributors

### Upstream engagement

Increased communications,  
gather feedback, share new  
updates with the community

# Introduction on FreeIPA WebUI

## Technical Stack Transition

Current WebUI:

**PatternFly** (v2)

dojo

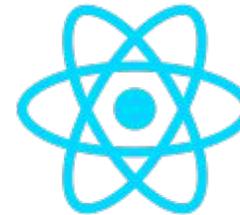

pytest

Modern WebUI:

**P A T T E R N F L Y** (v5)

cypress

cucumber

# Modernizing the WebUI

## Current vs Modern

The current web UI features a top navigation bar with tabs: Identity, Policy, Authentication, Network Services, and IPA Server. Below this is a secondary navigation bar with tabs: Users, Hosts, Services, Groups (selected), ID Views, and Automember. The main content area shows 'User Groups » admins' and 'User Group: admins'. It includes sections for 'admins members:' with tabs for Users (1), User Groups, Services, External, User ID overrides, and Settings; 'admins is a member of:' with tabs for User Groups, Netgroups, Roles, HBAC Rules, and Sudo Rules; and 'admins member managers:' with tabs for User Groups and Users. A table lists members with columns for checkboxes, User login, UID, Email address, and Telephone Number. The table contains one entry for 'admin' with UID 613800000. Below the table, it says 'Showing 1 to 1 of 1 entries.' There are also buttons for Refresh, Delete, and Add.

Navigation - Current (PF2)

The new web UI features a dark sidebar navigation menu with a hamburger icon and the FreeIPA logo. The menu items are: Identity, Users, Hosts, Services, Groups (expanded to show User groups, Host groups, Netgroups, ID views, and Automember), Policy, Authentication, Network services, and IPA server. The main content area shows 'User groups » User group: admins' and 'admins'. It has tabs for Settings, Members (selected), Is a member of, and Member managers. Below these are counts for Users (1), User groups (1), Services (1), External (0), and User ID overrides (1). There is a search bar, Refresh, Delete, and Add buttons, and a Membership section with Direct and Indirect options. A table lists members with columns for checkboxes, User login, UID, Email address, and Phone. The table contains one entry for 'admin' with UID 115100000. At the bottom right, it says '1 - 1 of 1'.

Navigation - New (PF5)

# Modernizing the WebUI

## Current vs Modern

The current web UI settings form is divided into two main sections: Identity Settings and Account Settings. The Identity Settings section includes fields for Job Title, First name, Last name (with a required asterisk), Full name (with a required asterisk), Display name, Initials, GECOS (with a value of 'api.test1'), and Class. The Account Settings section includes fields for User login (with a value of 'admin'), Password (with a masked value '\*\*\*\*\*'), Password expiration, UID (with a value of '61380000'), and GID (with a value of '61380000'). Below these are Principal aliases (e.g., 'admin@DEMO1.FREEIPA.ORG' and 'root@DEMO1.FREEIPA.ORG') with 'Delete' buttons, an 'Add' button, Kerberos principal expiration (with a date field 'YYYY-MM-DD' and time zone 'UTC'), Login shell (with a value of '/bin/bash'), Home directory (with a value of '/home/admin'), SSH public keys (with an 'Add' button), Certificates (with an 'Add' button), and Certificate mapping data (with an 'Add' button).

Settings form - Current (PF2)

The modern web UI settings form features a dark sidebar with a navigation menu including Identity, Users, Hosts, Services, Groups, ID views, Automember, Policy, Authentication, Network services, and IPA server. The main content area shows the user 'admin' with a 'Settings' tab. The Identity settings section includes fields for First name, Last name (with a required asterisk), Full name (with a required asterisk), Job title, GECOS (with a value of 'api.test1'), and Class. The Account settings section includes fields for User login (with a value of 'admin'), Home directory (with a value of '/home/admin'), Password (with a masked value '\*\*\*\*\*'), Password expiration (UTC) (with a date field 'YYYY-MM-DD HHMM'), SSH public keys (with an 'Add' button), Certificates (with an 'Add' button), and Certificate mapping data (with an 'Add' button). A 'Jump to section' sidebar on the right lists various settings categories like Identity settings, Account settings, Password policy, Kerberos ticket policy, Contact settings, Mailing address, Employee information, Misc. information, and User Attributes for SMB services. At the bottom, there are buttons for Refresh, Revert, Save, Disable, and Enable.

Settings form w/jump links - New (PF5)

<input type="checkbox"/>	opowers	O	Powers	✔ Enabled	1151000021	opowers@ipa

The screenshot shows the FreeIPA web interface. On the left is a dark navigation sidebar with categories like Identity, Users, Hosts, Services, Groups, ID views, Automember, Policy, Authentication, Network services, and IPA server. The 'Users' section is expanded, showing sub-categories: Active users, Stage users, and Preserved users. The main content area displays a table of users, including 'admin' (Administrator, Enabled), 'jsmith' (John Smith, Disabled), and a series of 'sother' users (sother\_01 to sother\_17) with various roles and statuses.

# Modernizing the WebUI

## Architecture

# Modernizing the WebUI

## New testing infrastructure

- ▶ BDD with Gherkin/Cucumber/Cypress
- ▶ Running in [GitHub Actions](#), server provisioned with Vagrant
- ▶ Executed for every PR
- ▶ In case of failure, screenshots and step-by-step video are stored as artifacts
- ▶ Easy local debugging with Cypress built-in graphical debugger - shows state for each step of the test execution

**Cypress Results**

Result	Passed	Failed	Pending	Skipped	Duration
Passing	1	0	0	0	17.735s

All checks have passed  
3 successful checks [Hide all checks](#)

# Modernizing the WebUI

## Old and new - equivalent test case comparison

```
self.init_app()

self.add_record(user.ENTITY, user.DATA, navigate=False)
self.navigate_to_record(user.PKEY)
```

```
ENTITY = 'user'

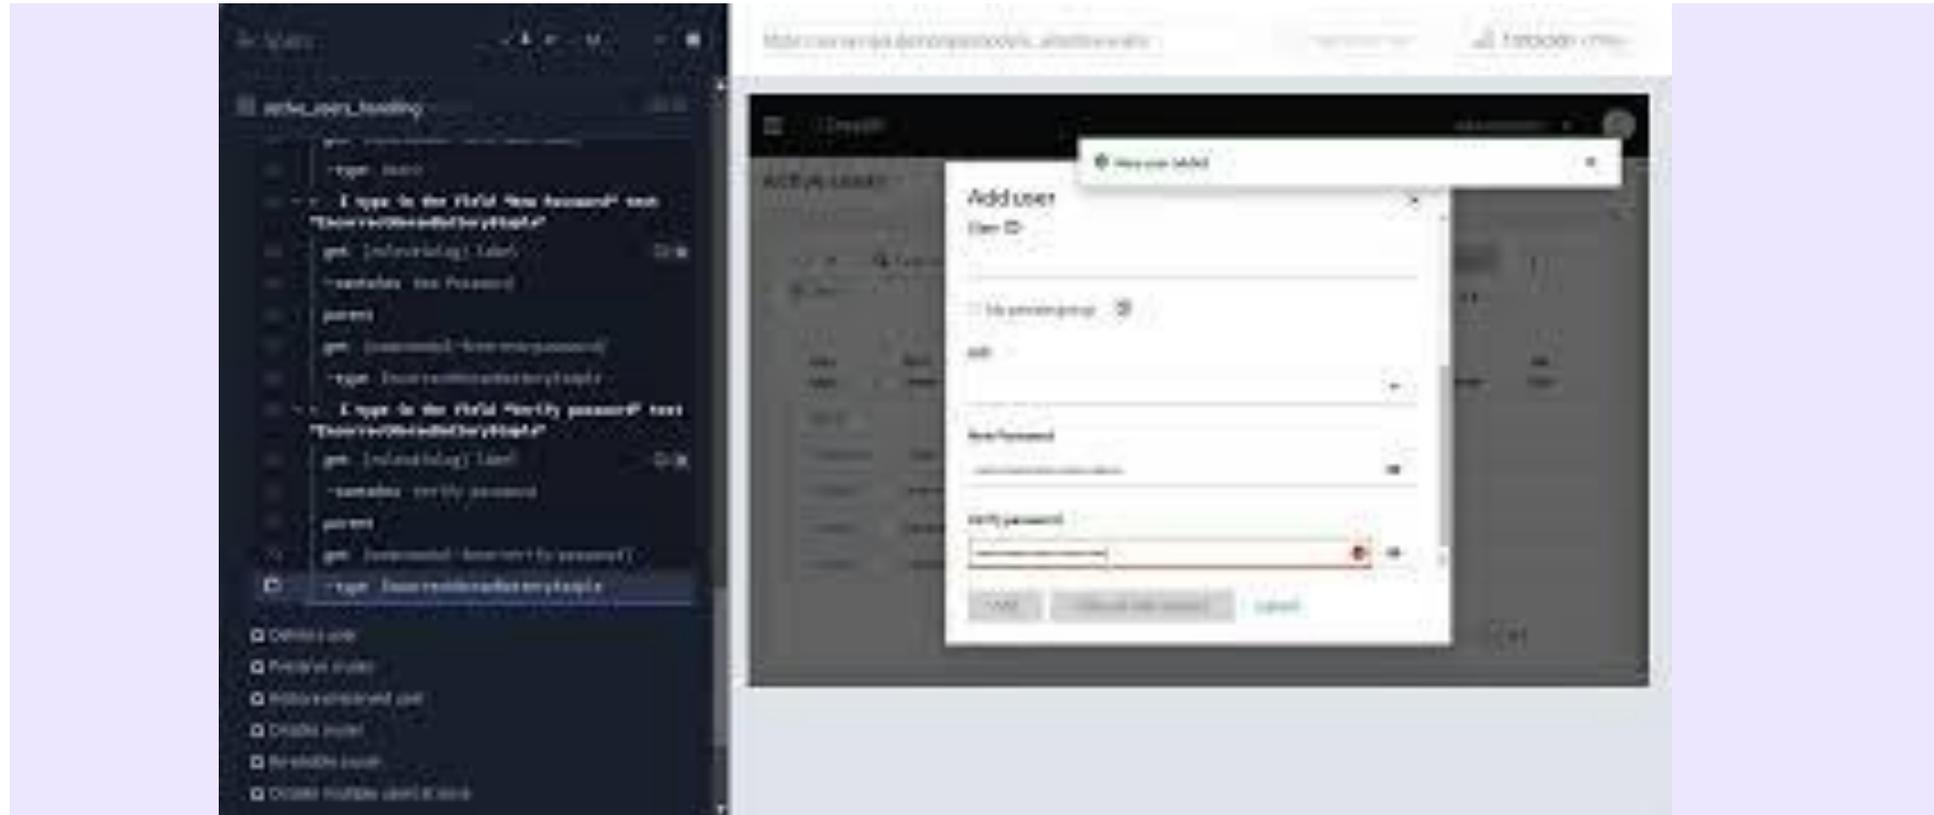

PKEY = 'itest-user'
DATA = {
    'pkey': PKEY,
    'add': [
        ('textbox', 'uid', PKEY),
        ('textbox', 'givenname', 'Name'),
        ('textbox', 'sn', 'Surname'),
    ],
    'add_v': [
        ('textbox', 'givenname', 'Name'),
        ('textbox', 'sn', 'Surname'),
        ('label', 'uid', PKEY),
    ],
    'mod': [
        ('textbox', 'givenname', 'OtherName'),
        ('textbox', 'sn', 'OtherSurname'),
        ('textbox', 'initials', 'NOS'),
        ('textbox', 'loginshell', '/bin/csh'),
        ('textbox', 'homedirectory', '/home/alias'),
        ('multivalued', 'telephonenumber', [
            ('add', '123456789'),
            ('add', '987654321'),
        ]),
        ('multivalued', 'mail', [
            ('add', 'one@ipa.test'),
            ('add', 'two@ipa.test')
        ])
    ]
}
```

Scenario: Add a new user

```
Given I open the side menu
* I click on "Active users" tab
* I close the side menu
* there is only admin user active
When I click on "Add" button
* I type in the field "User login" text "testuser1"
* I type in the field "First name" text "Arthur"
* I type in the field "Last name" text "Dent"
* I type in the field "New Password" text "ILoveKlingonPoetry42"
* I type in the field "Verify password" text "ILoveKlingonPoetry42"
* in the modal dialog I click on "Add" button
Then I should see "testuser1" entry in the data table
```

# Modernizing the WebUI

## Modern WebUI live instance

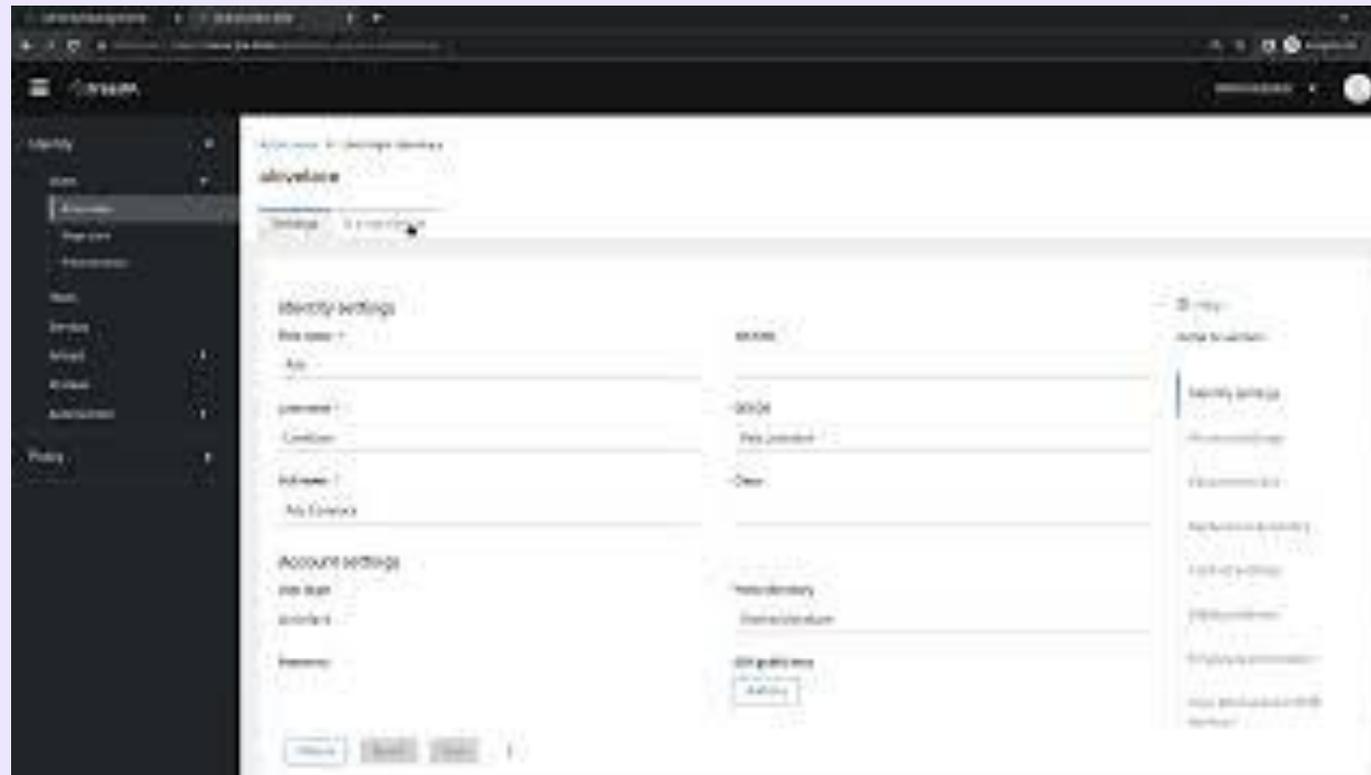

### 1. Log into the current WebUI live instance

- a. <https://ipa.demo-modernui.freeipa.org/ipa/ui>
- b. Credentials: *admin* | *Secret123*

### 2. Access into the modern WebUI site

- a. [https://ipa.demo-modernui.freeipa.org/ipa/modern\\_ui](https://ipa.demo-modernui.freeipa.org/ipa/modern_ui)

# Modernizing the WebUI

# Future roadmap

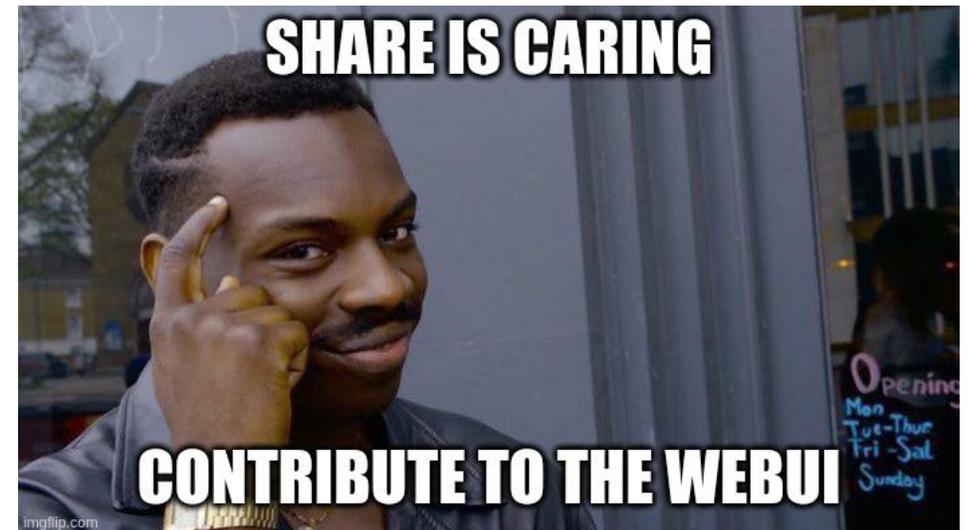

## What's next?

- ▶ Keep implementing new pages and functionality
- ▶ Improve routing → Adding direct links to pages
- ▶ Enhance potential performance issues with a lot of records
- ▶ Add internationalization (i18n) functionality
- ▶ Login page and authentication experience
- ▶ Adapt external plugins
- ▶ Engagement and more external collaboration

## Do you want to contribute?

Modern WebUI - [Upstream repository](#)

- ▶ Configure your [WebUI local instance](#)
- ▶ Check [issues](#)
- ▶ Open a [discussion](#) and don't hesitate to ask questions
- ▶ Enjoy learning!

# Q&A
