## Who's doing 4G and/or 5G?

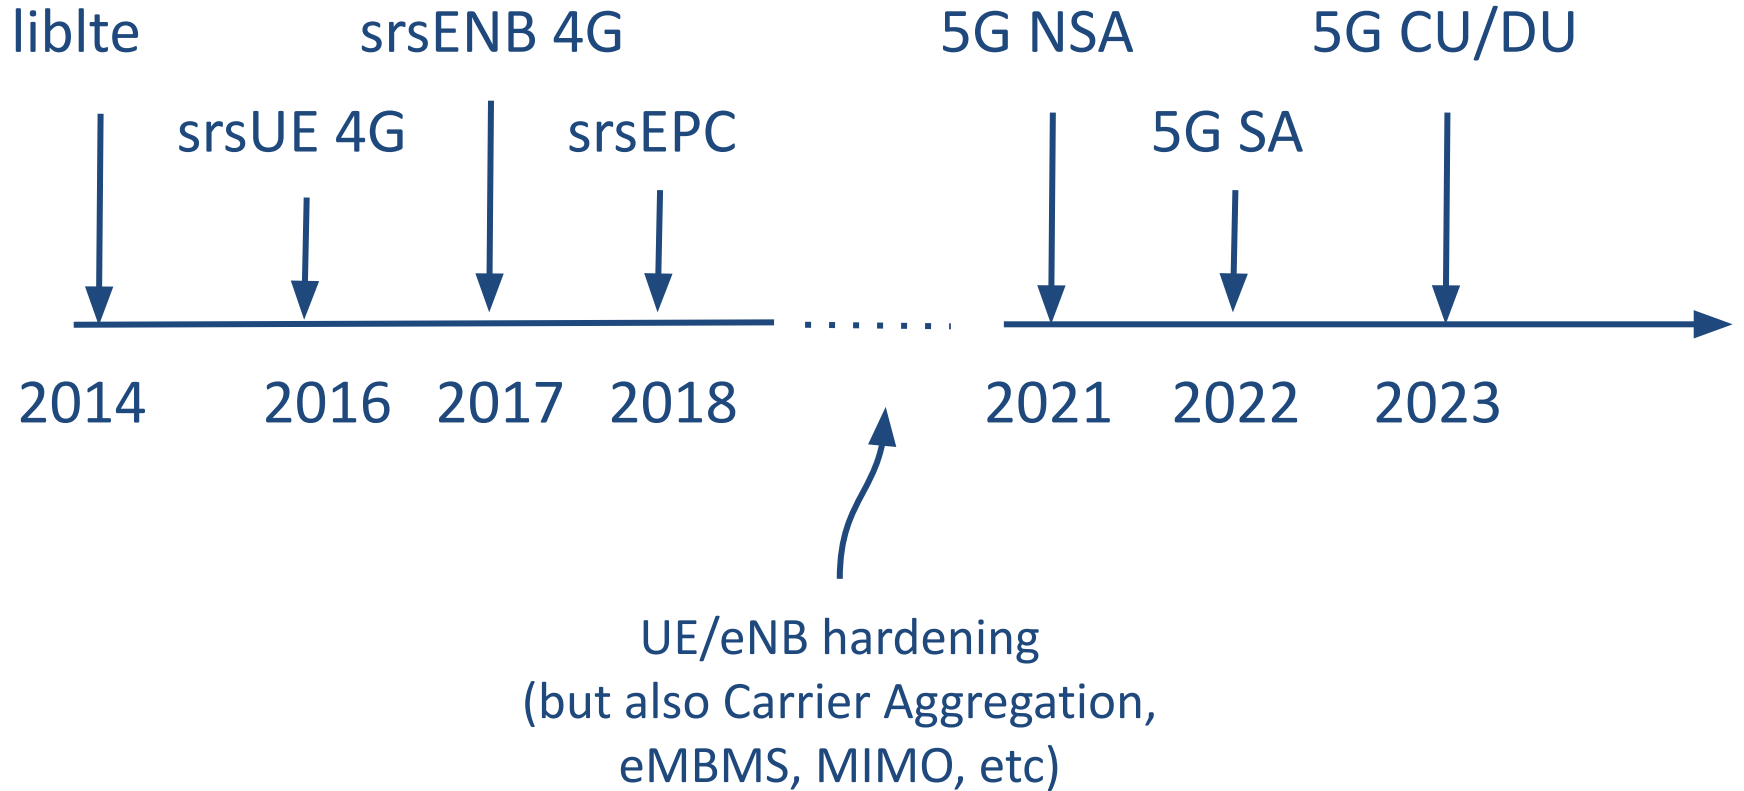

# github.com/srsRAN

- Initiated by operators to open interfaces for RAN components
- Interop between components from different vendors  
→ Long-term lower costs and avoid vendor-lock in
- Largely based on 3GPP specs, e.g. Central Unit (CU) - Distributed Unit (DU) splits, SmallCellForum (SCF), e.g. FAPI, and own interfaces, e.g. Open Front Haul to Radio Unit (RU)

# srsRAN 4G

---

- Deployed and maintained 4G code-base for eNB and UE
- Contains srsUE with limited 5G support
  - Only 15 kHz subcarrier spacing, not all UE procedures implemented
  - But can be attached to new gNB
- 5G gNB not recommended → For SA use new srsRAN Project gNB
- Last release: 23.11
  - Fixes for 5/10/15/20 MHz bandwidth in 5G SA mode

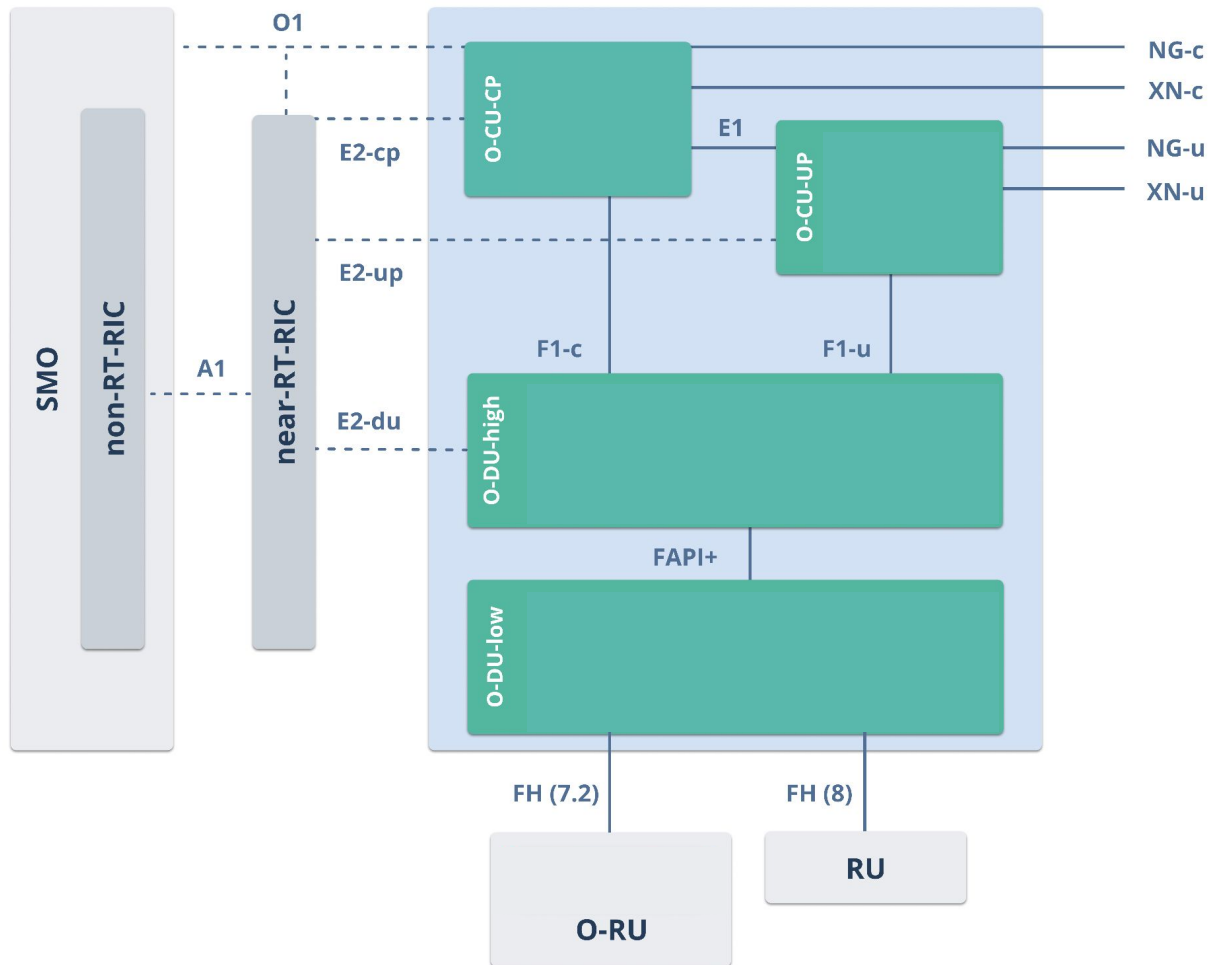

# Outline

---

- Demystifying 4G and 5G Repositories
- **srsRAN Project ORAN-native CU/DU**
- Demo

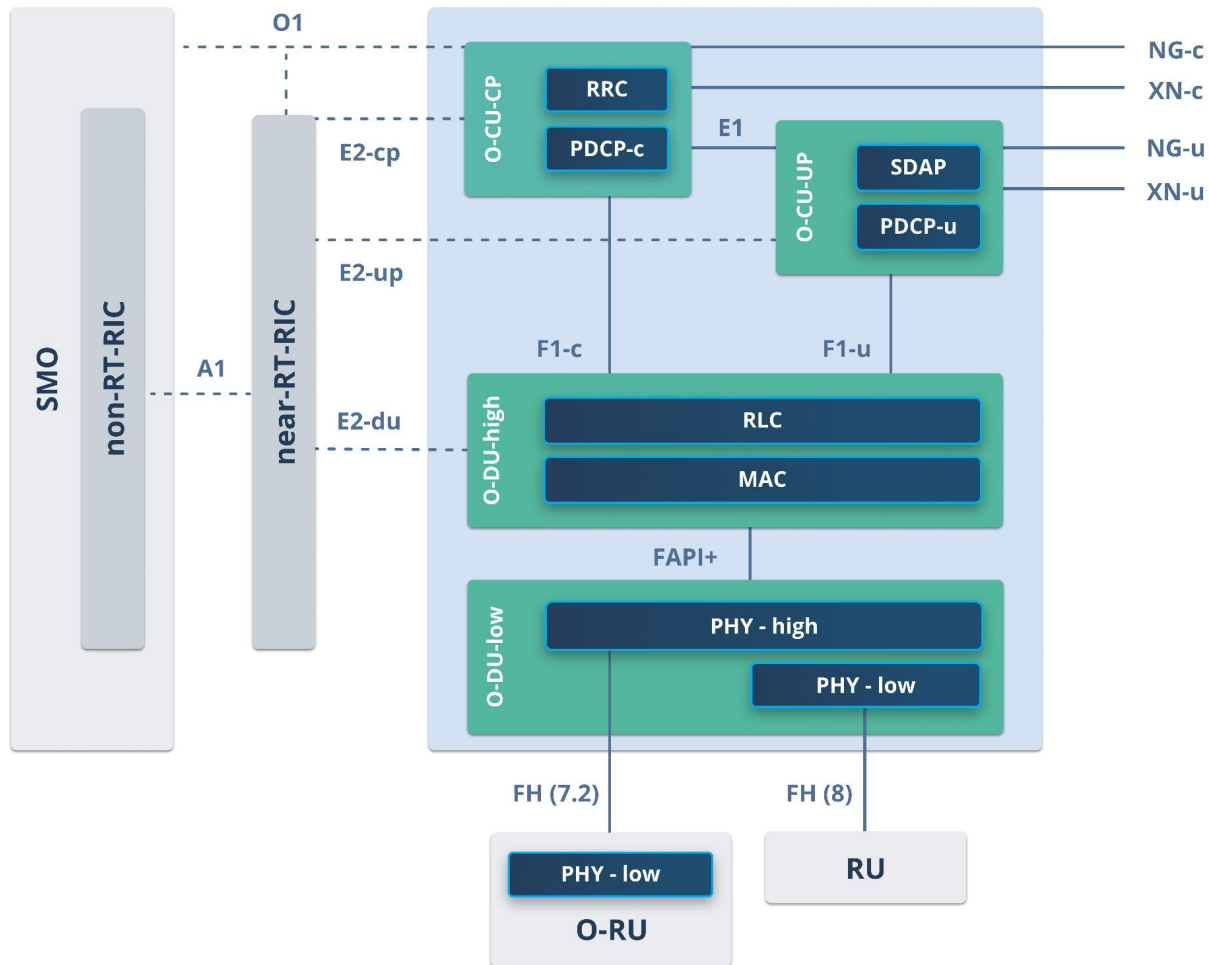

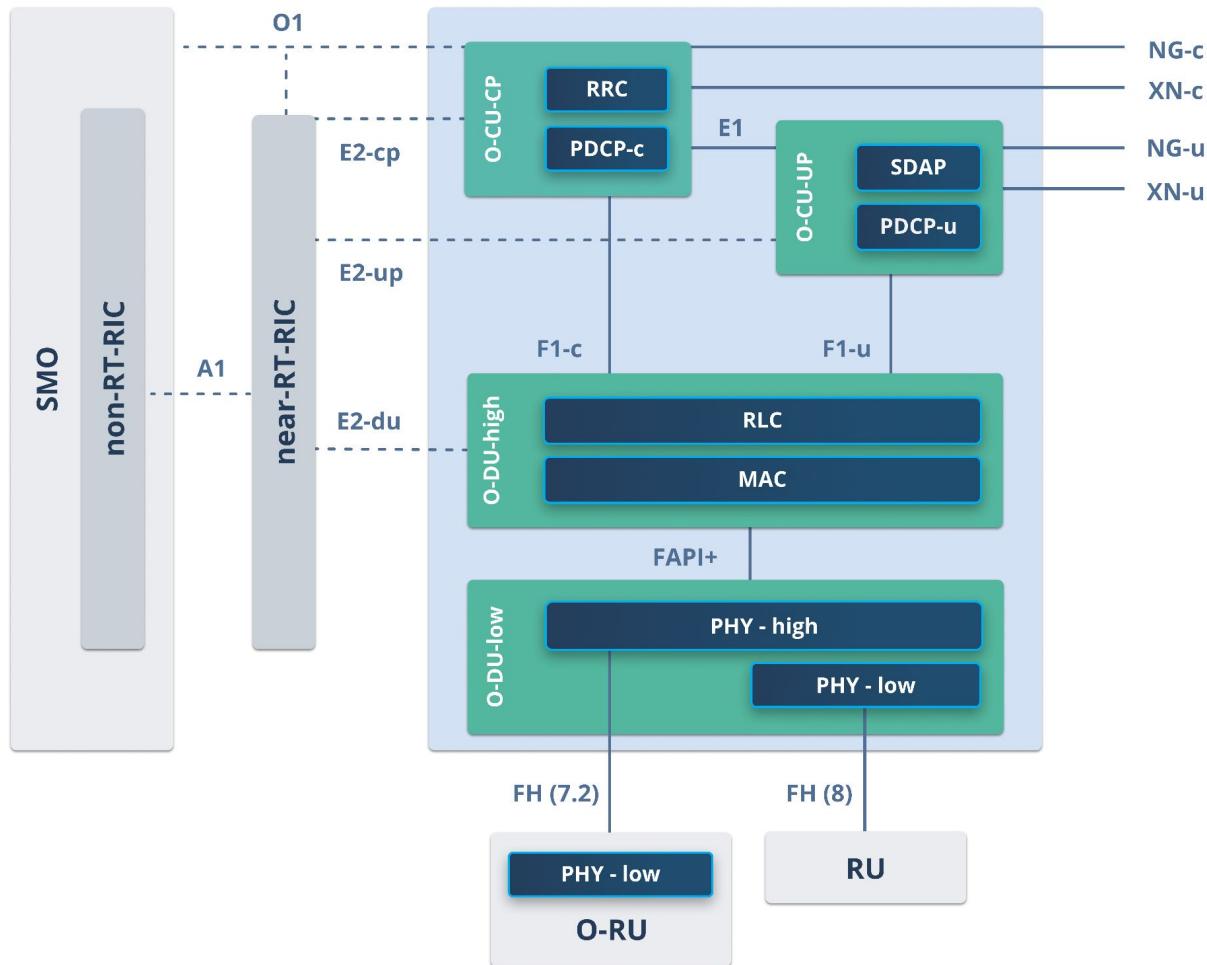

# SRSRAN PROJECT

# SRS RAN PROJECT

- Complete
- Portable
- Performant
- Flexible
- Interoperable
- Open

# Mainline Features

---

- Available now:
  - 100 MHz TDD, 50MHz FDD
  - 15 KHz and 30 KHz SCS (FR1)
  - MIMO 4T4R (4 layers DL, 1 UL)
  - 256-QAM DL and UL
  - All RRC procedures (including Paging, Reestablishment, Mobility)
  - All MAC procedures (excluding UL power control)
  - Split 7.2 for commercial RUs
  - Split 8 for using e.g. Ettus/NI USRPs
  - Split 6/FAPI for third-party PHY
  - E2 interface including KPM and RAN control (RC) service model
  - Deployed and tested on x86 (Intel/AMD) and ARM
- Performance:
  - 500+ UEs, 24/7 operation
  - 1500 Mbps DL, 200 Mbps UL (unaccelerated)

# Roadmap

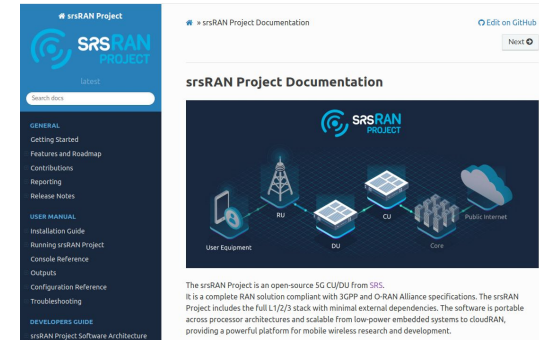

---

- Features for 24.4 Release:
  - Mobility
  - Initial O1 SMO integration
  - Initial NTN Release 17 support
  - Multi-cell support
  - CU/DU and CU-CP/CU-UP split

# srsRAN User Experience and Engagement

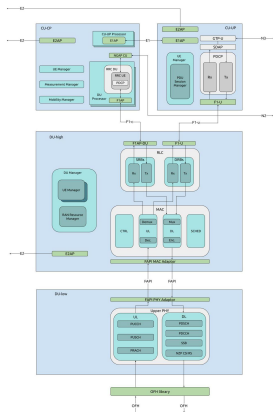

- Simplify Telco
  - Documentation
  - Developers guide
  - Testing
  - Application notes
  - Github discussions

## Guides

## Code

## Testing

## Engagement

# Outline

---

- Demystifying 4G and 5G Repositories
- srsRAN Project ORAN-native CU/DU
- **Demo**

# Demo - Complex ORAN Reality

# Demo - Complex ORAN Reality

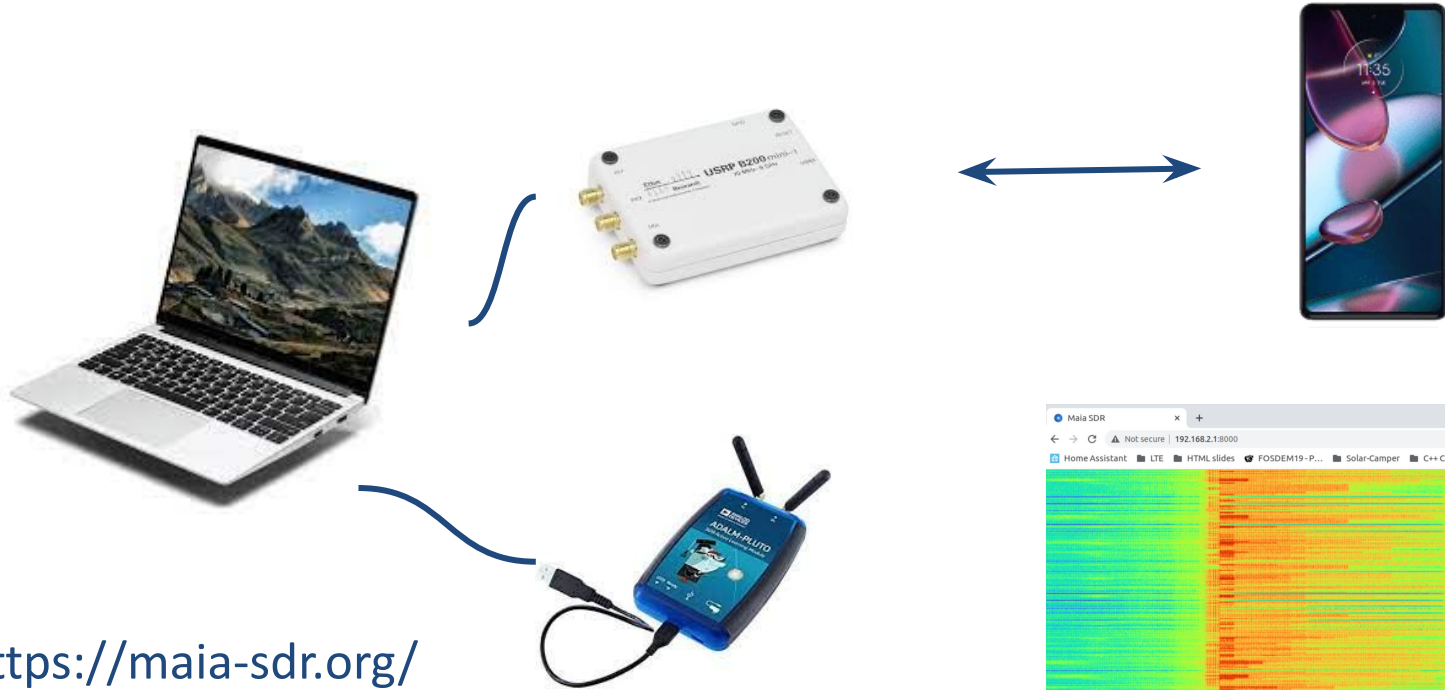

Open5G

srsRAN

# Demo - Outline

- One-command 5G network in the box
  - Docker for 5G-SA gNB, 5GC, Influx, Grafana (see appnote)
  - USRP B200mini as split-8 radio + Motorola Edge 30 Pro phone
  - PlutoSDR running MaiaSDR [1] as spectrum analyzer
