Open Quartz:

Building an open source AI solar forecast for everyone

with **Rachel Tipton** and **Zak Watts**

nationalgridESO

Google.org

What to expect

- About Open Climate Fix
- Why solar/renewable forecasting?
- Quartz Solar live solar forecasting service
- Open Source Quartz Solar model:
 - Model
 - Use cases & potential impact
 - Demo!!!
- Questions

```
from quartz_solar_forecast.forecast import run_forecast
from quartz_solar_forecast.pydantic_models import PVSite

site = PVSite(latitude=51.75, longitude=-1.25, capacity_kwp=1.25)

predictions_df = run_forecast(site=site, ts='2023-11-01')
```

About OCF

- Founded in 2019
- Non-profit product lab developing open-source AI solutions to decarbonise the electricity grid
- 40 years experience in AI & energy

**GLOBAL TOP 100
OUTSTANDING PROJECT**

AI solutions for Sustainable Development

Centre
Under the auspices
of UNESCO

International Research Centre

Open Source Code and Datasets

- All code made available on [GitHub](#)
- Models and datasets on [Hugging Face](#) 🙌
 - 500 people have signed up and downloaded datasets on Hugging Face
 - URL: <https://huggingface.co/openclimatefix>
- EUMETSAT data on [Google Public Datasets](#)
 - 15 years (and dozens of TBs) of geostationary satellite data
 - Accessible in an easy-to-access format (Zarr) for machine applications
 - **16,000 downloads** of the EUMETSAT datasets

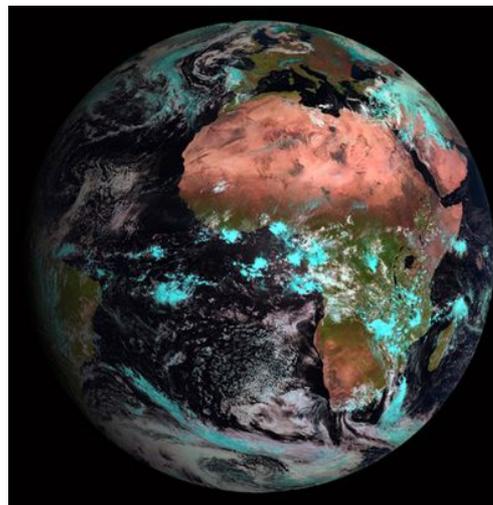

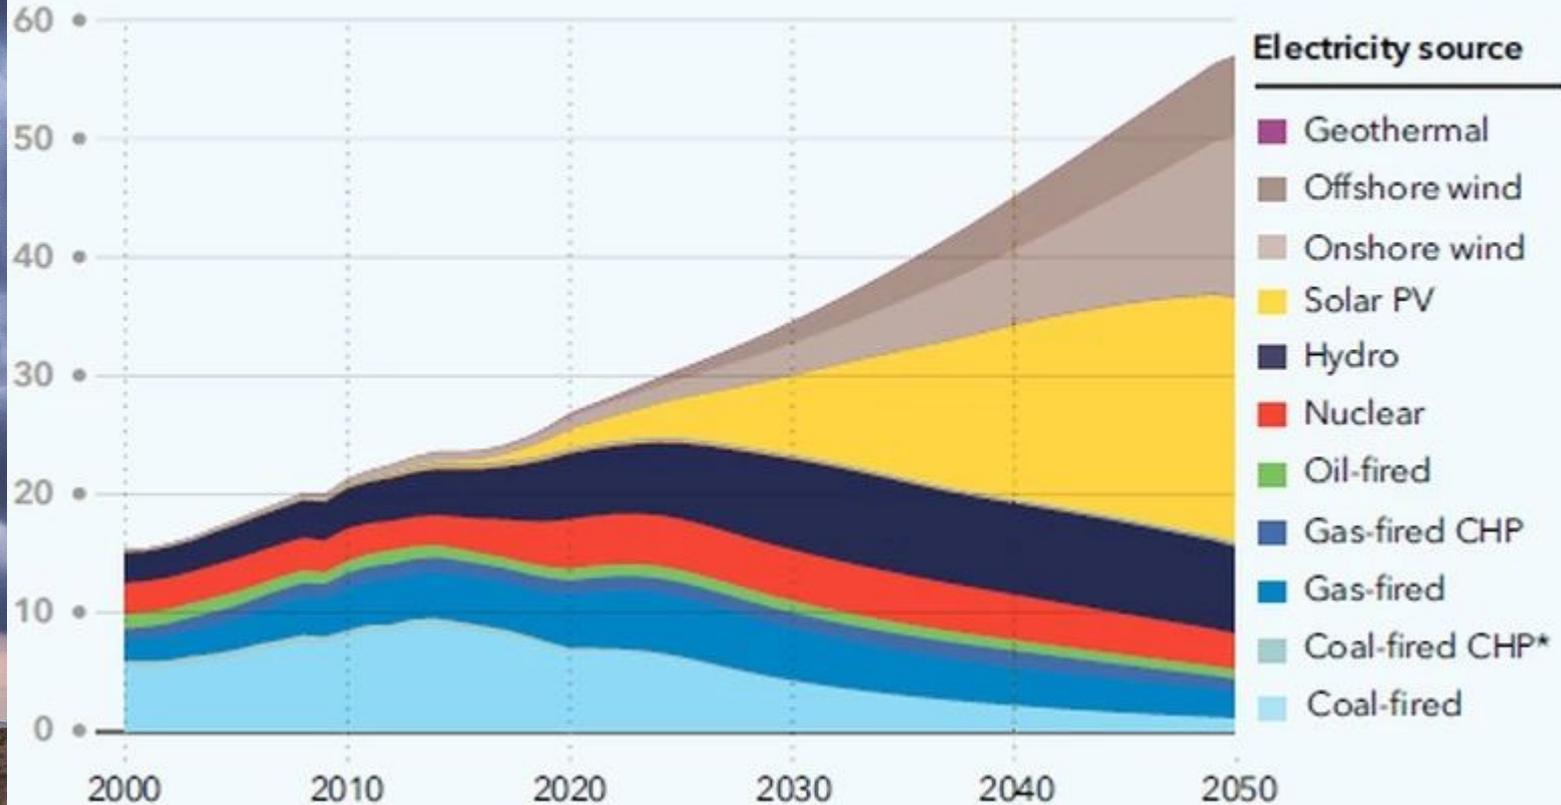

Image take from [EUMETSAT's website](#)

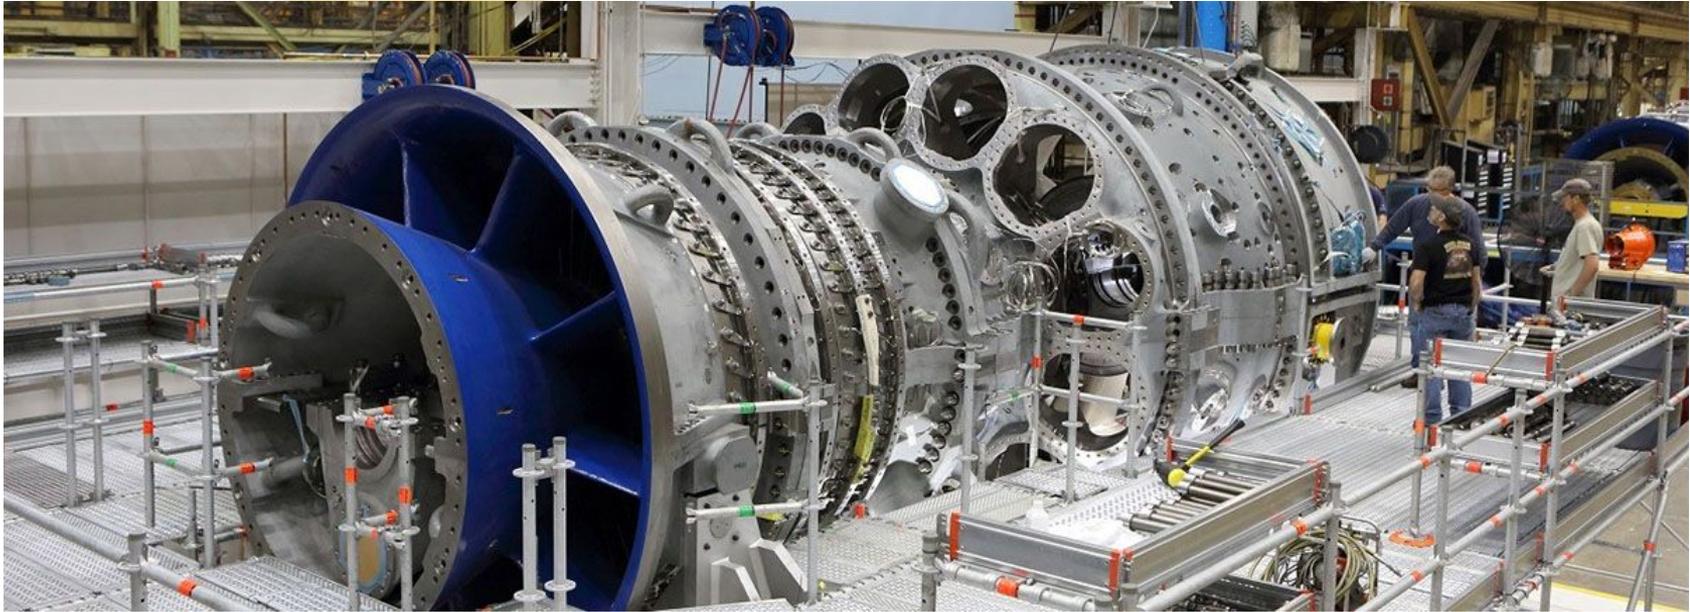

WORLD ELECTRICITY GENERATION BY SOURCE

Units: PWh/yr

The challenge of spinning reserves

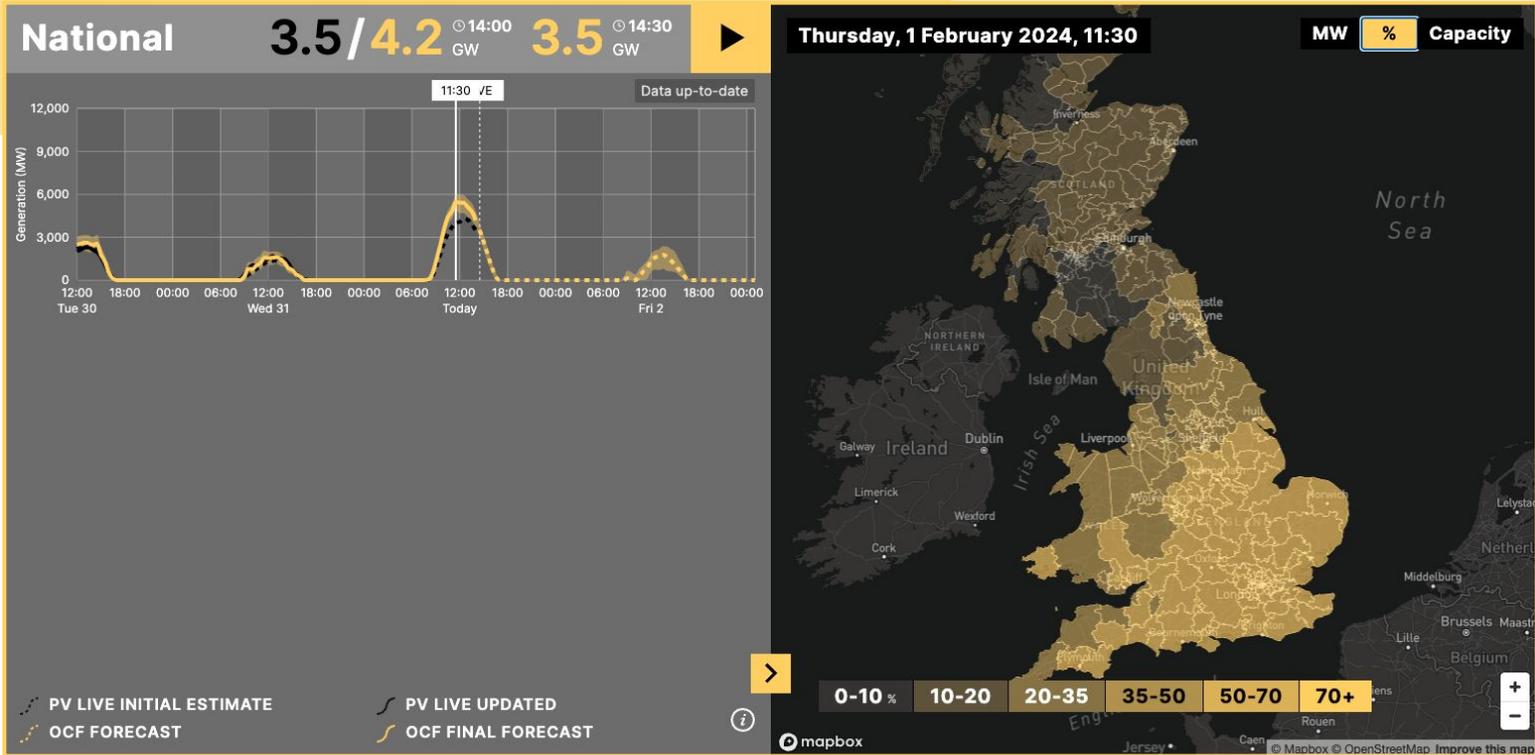

National Grid ESO

- Quartz Solar Forecast used in the control room
- Used for real-time balancing decisions
- 5 mins to 36 hours ahead
- All open source

Our Live Service Models

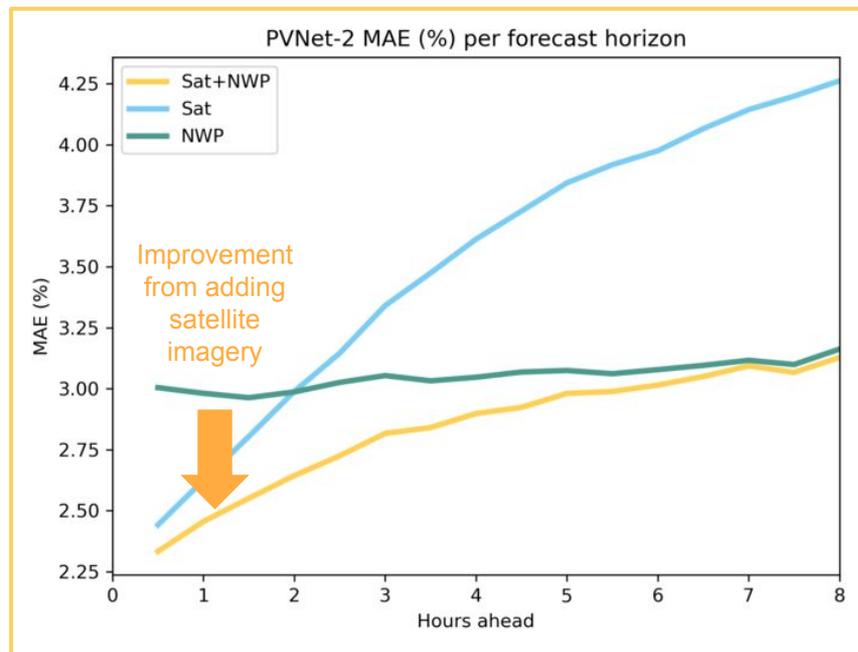

Quartz Solar Performance

MAE (%) = Mean Absolute Error Normalised By Capacity

- **3x better** than National Grid ESO's previous forecast (2 hour horizon)
- R&D ongoing - models implemented:
 - [MetNet: A Neural Weather Model for Precipitation Forecasting](#)
 - [Skilful precipitation nowcasting using deep generative models of radar](#)
 - [Temporal Fusion Transformers for Interpretable Multi-horizon Time Series Forecasting](#)

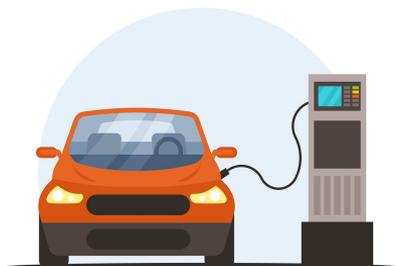

Sites Use Cases

Home Energy Management

Home Energy Optimisation

Made by FREE-VECTORS.NET

EV Charging Optimisation

Flexibility markets

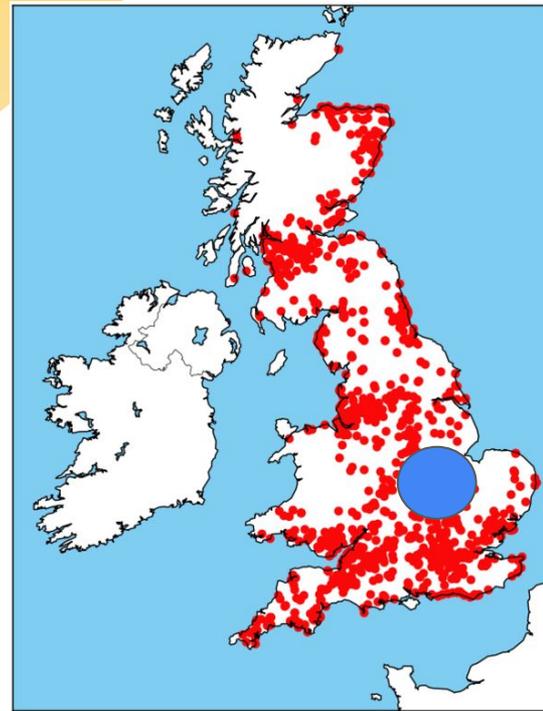

Who actually uses this?

- Smart home operators
- Startups in this space
- Experts in battery optimisation
- Research and academia
- Hobbyists

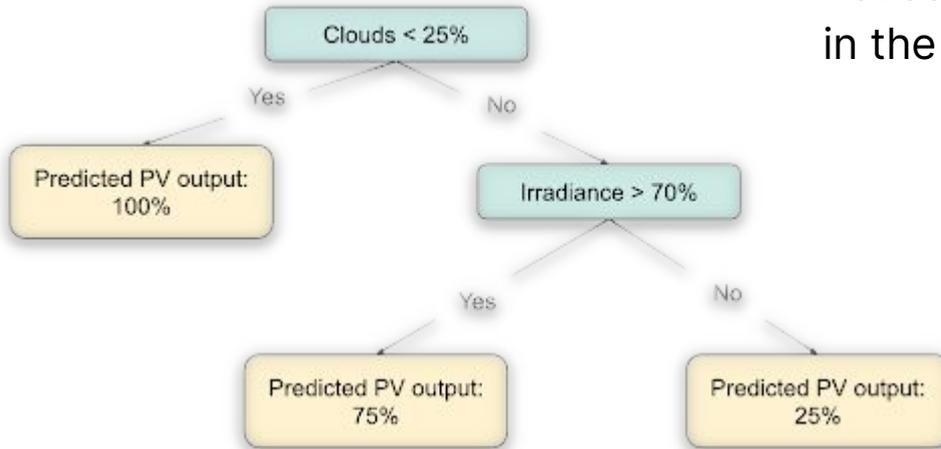

Our Models - Site

- Trained using over 1,000 household sites in the UK.

Map of UK solar sits

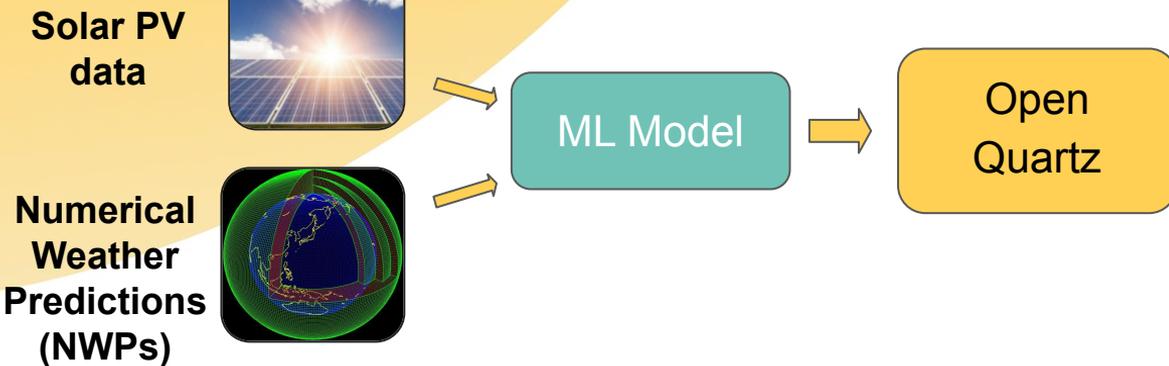

Decision Tree for PV output

- Model: Gradient Boosted Tree.
 - Thousands of decisions trees.

Open Quartz

- Use open NWP GFS + ICON
 - Cloud cover, temperature, visibility, short and long wave radiation, precipitation
 - [Open Meteo](#)
- Use a pretrained model
 - With the ability to support new models.
- Forecast **48 hours** ahead
- **15 minute** forecast resolution
- Forecast in **four lines of code**
- Embedding complex ML and data ingestion, making it accessible to anyone.
- **6% MAE**

Open Source Solar Forecast - Demo

```
pip install quartz-solar-forecast
```

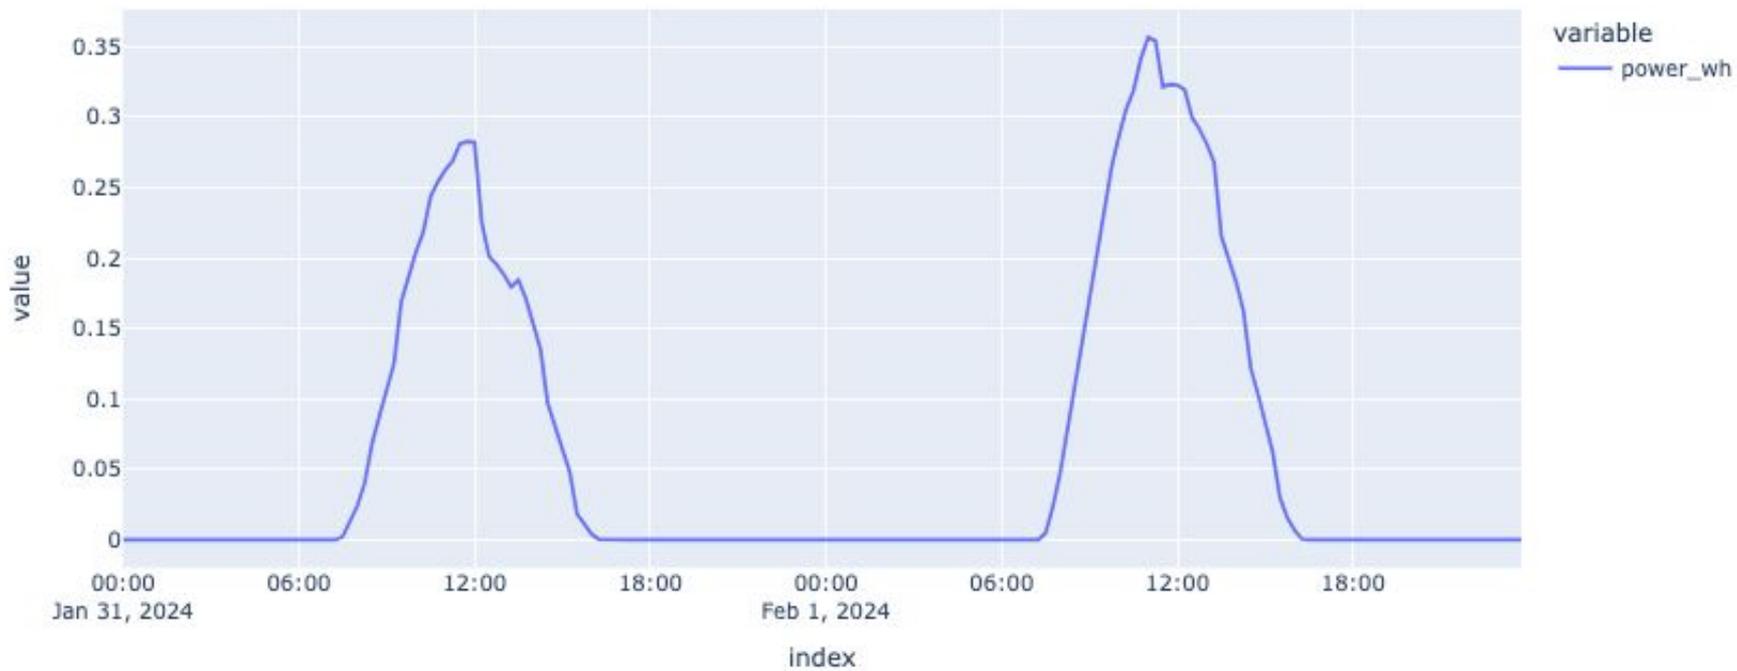

Scan QR code to
go to the Quartz
Solar Open Source
repo.

```
from quartz_solar_forecast.forecast import run_forecast
from quartz_solar_forecast.pydantic_models import PVSite

site = PVSite(latitude=51.75, longitude=-1.25, capacity_kwp=1.25)

predictions_df = run_forecast(site=site, ts='2023-11-01')
```

Quartz Open Source Roadmap

- Additional data inputs:
 - More weather data (NWPs)
 - Live PV data
 - Include tilt and orientation
- Integrating and trying out new models
- More diverse solar training datasets
- Experiment
